Preferred stockholder group opposes Lehigh reorganization

BY VIVIAN PAUL
Staff Correspondent

ALLENTOWN — A group of preferred stockholders of the Lehigh Valley Cooperative Farmers has formed in opposition to the reorganization plan approved by coop members last month.

The group, called Stockholders Protective Committee, says it plans to file suit against officers and directors of the dairy to stop the plan which would leave them with 15% of the face value of the stock they own.

The committee was organized by Harold Snyder, of Perkasie, and Willard Roth, of Coopersburg, both of whom are preferred stockholders.

The two men placed an advertisement in the business section of the Allentown Morning Call last week seeking to locate other preferred stockholders. Snyder said dairy officials declined to provide the committee with a list of stockholders.

They have retained Irving Coleman, a corporate attorney in Allentown, and the Philadelphia law firm of Blank, Rome, Comisky, McCauley, well-known securities specialists.

The reorganization plan was approved by a vote of 455 to 82 at Lehigh's annual meeting April 25 in Lancaster. Only holders of common stock were eligible to vote.

The proposal involves the dissolution of Lehigh Valley Cooperative Farmers and the sale of its assets to a new organization, Atlantic Processing, Inc., and the establishment of a second business, Lehigh Valley Farmers, which would be strictly a bargaining coop.

Atlantic Processing will take over the 47-year old dairy by assuming its $20 million debt and paying $1.8 million in cash. That amount would be distributed to preferred stockholders. Common stockholders would receive nothing.

Book value of the preferred stock is listed at $12 million. Additionally the dairy is $3.5 million in arrears in dividend payments to preferred stockholders.

"Why should shareholders accept $1.8 million for $12

A tornado blew an entire roof section from the Chambersburg Livestock Barn (shown in foreground) on Monday evening. In the background is the American Can Company which also received heavy roof damage.

Tornado rips roof off livestock sales barn

CHAMBERSBURG — Strong gusts of wind and a brief yet intense rainfall, considered by many area residents and officials as a tornado, struck the communities of Chambersburg and Fayetteville here in Franklin County leaving behind severely damaged businesses, homes, cars, trees and a church.

The storm that hit at approximately 6:00 p.m. on Monday evening, May 12, tore an entire portion of roof off the Chambersburg Livestock Sales, Inc. building on Wayne Avenue, on the southern side of Chambersburg. The winds also ripped sections of stairs and power lines away from the building.

Tin from the livestock barn, and rafters and tin from the lumber yard next door, wrapped around power lines and tore them completely down along a business section of Wayne Avenue.

Several motorists were trapped in cars and many people were trapped inside a restaurant as the live electric wires came crashing down around them.

Large portions of debris from the livestock barn, the lumber yard and the American Can Company (also located on Wayne Ave.) were found scattered around in a large corn field across from these buildings. Portions of roof and rafters were also found in the K-Mart Plaza parking lots, some 350 yds. away.

According to William

Is time killing new ag fair?

BY PAT KAUFFMAN

LITITZ — With only 4-5 months remaining before the proposed date, Secretary of Agriculture, Penrose Hallowell said the Pennsylvania Department of Agriculture is still considering the possibility of an ag fair to be held at the Keystone Race Track, but time is running short, and hopes of a decent showing this fall are growing slimmer with the hour.

The PDA has proposed a state-wide ag fair to be held at the Keystone Race Track facility near Bensalem, a suburb of Philadelphia. The fair, according to Hallowell, would be held in the Fall, possibly late September or early October. Hallowell said the main thrust of the fair would be a farm/city approach with agricultural exhibitions of livestock and produce to familarize urbanites with Pennsylvania commodities and help provide a market for state produce.

Hallowell stated that the department is interested in the Keystone site because it would be offered free of charge, and the fair would probably be scheduled to run 2-4 days, some of which races would also be run.

James Sumner, Bureau of Markets, stated that in order to draw the urban crowd, competitions would probably be scheduled, possibly a tractor or horse pulling contest. Initially, Sumner said the effort would include representative samples of livestock exhibitions. And with time, he stated, the show would aim to be all-inclusive.

Funding options announced include funds from the Farm Show, state fair funding, an alternative that would require a three year delay, or money from the state legislature.

Hallowell noted that in the first year of the fair, limited space would be available under tent. A large exhibit of cattle would run into difficulties of tent space and water supply. The fair is, Hallowell noted however, still only in the preplanning stage. The fund should be self-supporting, Hallowell noted and the time element is to be watched closely. While there is still time to plan something for this fall, he said that further plans will depend on whether or not there is time to do a respectable job. Hallowell said the department has talked to farm groups including Bucks County Farmers' Association and has consulted with Bucks County Commissioners.

The fair would basically have use of the lawn, he said, and would share parking facilities with the race track. He noted that the issue of manpower to plan and operate a fair has not been resolved. He said the department has a modest amount of staff.

Les Houck, New Holland, executive director of the PA tractor pullers said that to attract participants in the modified stock and super stock competitions there would have to be sizeable premiums available. He

Pseudorabies in 9 herds

BY DICK ANGLESTEIN

LANCASTER — Pseudorabies is now confirmed in nine swine herds across a four-county area in southeastern Pennsylvania as the state's investigation continues to fan out to attempt to find the original source of the disease.

The nine infected herds, in which lab tests have confirmed existence of the disease, include six in Lancaster County and one each in Dauphin, Lebanon and Berks counties.

The six Lancaster County herds are concentrated in the northern part of the county, primarily the Ephrata area, according to Dr. John W. Cable, Chief of the Swine Health Division of the Pennsylvania Department of Agriculture.

Presently, a total of 11 herds are under quarantine, including the nine infected herds. Seven other herds have been released from quarantine, after negative test results were reported from animals that had been exposed to the infected herds.

Additional precautionary quarantines are expected to be issued, according to Dr. Cable, pending the results of laboratory testing.

"Our investigation still hasn't turned up any definite information concerning the original source of the disease," Dr. Cable said.

"We don't have any common link related to all of the infected herds."

Berks farmers confront Congressman on FmHA troubles

BY LAUREL SCHAEFFER
Staff Correspondent

READING — Seeking solutions to problems many local farmers are having in getting financial aid from the Farmer's Home Administration, and the apparent lack of concern of the local and state adminstrators within FmHa, sent the president of the Berks County Farmers' Association, Jack Kooker, along with two representative farm couples, to the office of Congressman Gus Yatron.

The group met on May 10th with Rod Fisher, Congressman Yatron's aide in the Reading office. The scene was set for the farm representatives to explain their dilemna. They cited their own experiences in seeking funds from the Leesport office of FmHa in their plea to the Congressman for improvement.

Kooker, along with being an officer for the county's PFA, also sits on the three-member board of farmers that review FmHA applications at the local office.

He said he was embarassed when some applicants for loans called him and reported they had never heard from the FmHA office

Going that extra mile for better milk yields.

When your cows need feed, they need feed. They need it right away. And in the right combination. That's why the Pennfield delivery fleet packs so much versatility for its size. Compartmentalized trucks deliver feed from any of our four plants where more than 22,000 tons of grain and other ingredients are kept on hand ... ready for mixing at all times. By going this extra mile to deliver the right feed at the right time we can assure you that the Pennfield Computerized Total Ration Service is helping you to better milk yields. Here's how the service works: **1.** We collect samples of your forage. **2.** Then we evaluate the quality of your forages. We determine the total digestible nutrients. The fiber content. The protein content. The amount of carbohydrates. **3.** The computer quickly spots any nutrients lacking in the forage. For your milking cows. And for your dry cows. It immediately points out the overfeeding of nutrients. Underfeeding, too. Both, of course, may be different at different times of the year. And the printout will tell you what you need. And when. **4.** Your Penn Pro Professional advises you on the quantity and type of nutrients that should be added, to balance your total feeding program to your cows nutritional requirements.

(Top) Peter Knutsen, Penn Pro Professional, checks dairy feed program with Dan Herschberger, Center Springs Farms, Quarryville, Pa (Below) Compartmentalized trucks help assure the right feed combination is delivered at the right time

Try the Pennfield Computerized Total Ration Service. For better milk yields. For better profits. There's no cost or obligation. Just phone us today at Pennfield Feeds. Local calls: Lancaster 299-2561, Red Lion 244-4511. In 717 and 215 areas dial toll-free 800-732-0467. Pennfield Feeds, Rohrerstown Road, Lancaster, PA 17604.

Penn Pro is a total feed program from Pennfield Feeds.

Belknap Livestock

Wednesday, May 14
Report supplied by PDA

CATTLE 95. Compared with last Wednesday's market, slaughter cows $4 to $5 higher. Couple Choice slaughter steers 62.25 and 63.75, yield grade 4-5 1270-1435 lbs. 52.25-58.00, Good 57.00-61.25, Standard 51.00-55.00. Few Choice slaughter heifers 57.00-61.75, few Good 54.75-57.50. Utility & Commercial slaugher cows 48.00-54.25, Commercial No. 4-5 43.00-48.00, Cutter 47.00-52.75, Canner & Low Cutter 42.00-47.00, Shells down to 38.00. Couple Yield Grade #1 1140 and 1740 lbs. at 64.00; couple yield grade #2 1150-1680 lbs. 55.75 and 57.25.

CALVES 73. Few Choice vealers 103.00-113.00, few Good 90.00-100.00, few Standard & Good 90-110 lbs. 66.00-74.00, 65-85 lbs. 53.00-65.00. Farm calves, holstein bulls 90-130 lbs. 78.00-116.00, 80-90 lbs. 69.00-79.00; few holstein heifers 75-125 lbs. 100.00-134.00; beef cross bulls & heifers 60-130 lbs. 71.00-101.00.

HOGS 374: Barrows & gilts 50 cents to $1 higher. US No. 1-2 210-245 lbs. barrows & gilts 32.10-33.30, No. 1-3 200-255 lbs. 31.00-32.30, No. 2-3 200-270 lbs. 29.00-31.00, Lot No. 2-3 265 lbs. at 28.00. Sows mostly $2 higher. US No. 1-3 285-700 lbs. sows 24.00-30.00, one 31.00, few Utility 205-315 lbs. 18.00-23.00. Boars 21.00-28.00.

FEEDER PIGS 89: Us No. 1-3 20-35 lbs. feeder pigs 6.00-14.00 per head, few No. 1-3 45-60 lbs. 16.00-18.00, few No. 1-3 80-100 lbs. 21.00-26.00 per head.

SHEEP 18: Lot choice 95 lbs. spring slaughter lambs 74.50. Few Slaughter ewes 19.00-20.50.

Omaha Cattle

Thurday, May 15
Report supplied by USDA

Midweek prices on slaughter steers were weak to 25 cents lower. Heifers closed mostly steady. Cows were 1.00-1.50 higher and bulls were steady.

Four day receipts 15,000, last week 13,500, a year ago 12,400.

The fed cattle trade was characterized by a good demand by all interests on expanded marketings, including buying interests outside the immediate Omaha area. Consignments included a moderate volume of cattle from outside the normal trade territory. Prices showed a high degree of stability with day-to-day variations quite mild. Firm carcass prices and fairly good demand the forepart of the week provided the major stimulation in live trading. The overall finish of the steer supply was quite attractive with a liberal percentage choice, although many consignments were mixed 3-4; much of the heifer crop was good to average-choice. Slaughter steers made up approximately 53 pct and heifers 33 pct. Cows comprised 8 pct and feeders 6 pct.

STEERS: Early, three loads Choice and Prime predominantly 3 1186-1219 lbs. 65.75. At midweek, part load Choice with end Prime 3 1226 lbs. 65.50, several loads same grade 3-4 1162-1304 lbs. 65.00-65.25. Choice 2-4 1000-1300 lbs. closed 64.25-65.25, some 1200-1300 lbs. with increased percentage 4 63.00-63.75. Mixed Good and Choice 2-3 1000-1250 lbs. 63.50-64.25. Good 2-3 62.00-63.25. Part loads Good 1200-1325 lb. 2-3 Holsteins 58.00-58.50.

Average of LS-214 detailed quotations for Choice 900-1100 lb. steers this week 64.92; Choice 1100-1300 lbs. 64.70. Average cost slaughter steers this week 64.48 average weight 1174 lbs. as compared 63.21 and 1160 lbs. week ago. Average cost heifers 62.08, average weight 998 lbs. as compared 61.21 and 1003 lbs. week ago.

HEIFERS: Load Choice and Prime 3-4 1075 lbs. 64.00 Monday. At Midweek, part load Choice and Prime 3-4 1118 lbs. 63.75, several loads and part loads same grade 3-4 1010-1126 lbs. 63.00-63.25. Choice 2-4 900-1075 lbs. closed 61.50-63.00. Mixed Good and Choice 2-3 875-1050 lbs. 61.00-62.00. Good 2-3 57.50-60.00.

COWS: Utility and Commercial 2-4 42.50-44.50, few 45.00-45.25. Cutter 40.00-43.50. Canner and Low Cutter 38.50-41.50.

BULLS: 1-2 1200-2000 lbs. 50.00-55.00.

Oklahoma Cattle

Thursday, May 15
Report supplied by USDA

Estimated Receipts 8,200
Same Day Last Week 8,984

Trade active, feeder steers under 800 lbs. steady to 2.00 lower; steers over 800 lbs. mostly 2.00 lower; feeder heifers over 500 lbs. steady to 1.00 lower; limited supply of heifers under 500 lbs. near steady. Majority receipts medium frame 1, 500-800 lbs. feeder steers and 400-700 lbs. heifers. Good buyer attendance.

FEEDER STEERS: Medium Frame 1, 400-500 lbs. 75.50-82.00, two lots 435-445 lbs. 86.00; 500-600 lbs. 70.00-75.25; 600-700 lbs. 67.25-70.25; 700-800 lbs. 63.50-67.25, part load 740 lbs. 67.76; 800-900 lbs. 62.50-64.50, package 975 lbs. 62.75. Large Frame 1, lot 675 lbs. 68.00, 700-800 lbs. 62.00-66.50; 800-900 lbs. 61.50-62.25. Small Frame 1, few 550-625 lbs. 67.25-68.25; part load 735 lbs. 62.00. Medium Frame 1-2, few 400-500 lbs. 67.25-77.25; 600-700 lbs. 64.00-67.50. Large Frame 1-2 650 lbs. 66.50; 700-800 lbs. 61.25-64.00. Large Frame 2 Holsteins, few 300-325 lbs. 79.75-80.75; lot 440 lbs. 74.00; lot 620 lbs. 57.00; lot 930 lbs. 57.00; lot 1090 lbs. 55.75.

FEEDER HEIFERS: Medium Frame 1 400-500 lbs. 65.50-69.25; 500-600 lbs. 63.00-65.75; 600-700 lbs. 61.75-63.75, lot 625 lbs. 64.50; lot 770 lbs. 58.75. Medium Frame 1-2 400-500 lbs. 61.00-66.00; 500-600 lbs. 60.25-63.00; 600-700 lbs. 58.75-59.25; lot 715 lbs. 55.00. Medium Frame 2 package 525 lbs. 62.00; 550-700 lbs. 55.50-59.50.

FOR THE WEEK: Feeder steers over 800 lbs. steady to 1.00 lower; steers under 800 lbs. steady; feeder heifers steady, instances of 1.00-2.00 higher on heifers over 500 lbs. Slaughter cows and bulls 1.00 higher; late sales of Utility and Commercial 2-3 42.00-46.00; low dressing and YG 3-4 41.00-43.25; few Cutter 1-3 42.00-43.00; Canner and Low Cutter 38.50-40.50. YG 1, 1500-1800 lbs. slaughter bulls brought 62.00; YG 1-2 950-1400 lbs. 54.00-61.25. Salable receipts this week were near 20,900 head; compared with 23,794 head last week and 29,899 head the same time one year ago. Feeder steers and heifers comprised 95 percent of the receipts; cows and bulls 5 percent.

Leesport Auction

Lancaster Farming says...

Why supply-demand doesn't work

A year ago hogs were selling for 56 cents and pork chops in the supermarket were going for $1.89. Today, hogs are selling for 32 cents and pork chops still are going for $1.89. What's the story?

It works the same for butter or beef, walnuts or wheat. A year ago, bakers tried to use slightly higher farm wheat prices as an excuse to predict dollar-a-loaf bread.

The reason for the topsy-turvy pricing situation is the law of supply and demand is vetoed for agriculture, says David A. Witts. Witts is a rancher and attorney who has written a book called The Power of Parity. He argues that 100 percent parity is vital to assure the nation is fed and clothed properly.

He points out that if supply exceeds demand, prices should drop. So if the producer gets less, then the consumer should pay less.

But any consumer will tell you that's not the way it is. Often the farmer is blamed.

Everyone in the food pipeline, except the farmer, tacks on costs and profit, not earned by productivity but resulting from inflation, taxes, wages, union dues, government regulations, and environmental blue laws, he says.

While it's not true that the processors add nothing, it's hard to accept the fact that the wrapper on a loaf of bread costs more than the wheat.

Witts points out General Motors has one middleman between producer and consumer, utilities have none. The food chain is loaded with middlemen.

As if the scales weren't tipped enough by a chain of middlemen wearing cost-plus uniforms, and by regulations which add to the cost but not the calories, the farmer is stopped short of his profit goal by the giant government goal tender.

Rather than help farmers, the government goalie adheres to a political game plan: either dump surpluses on the market to force prices down; or, open the flood gates to foreign imports.

This Alice-in-Wonderland market does not set the value of a commodity by its supply and demand, but by consumer interest groups and their congressmen.

While industrial productivity has increased at an average of one percent per year, wages have increased at an average eight percent per year.

Agricultural productivity has gone up four times faster than industrial output, but farm income actually has declined.

It remains beyond the understanding of most agricultural observers why the farm factory is not properly recognized for what it contributes to the economy.

The most telling point in the supply-demand argument is the ratio 365 to 1. When the farmer's product is ready to market, there is a year's worth of supply but only a single day's demand.

Farmers, recognizing this, have dotted the countryside with grain storage bins. But it's impossible to store a bulk tank of Class I milk or keep a fat steer around for too long and still be able to market it.

Perhaps, as Witts says, the rules have been changed. Supply and demand, long the darling of free-market economists, is being smothered by intervention on all sides.

The answer, then, would seem to be a united farmer front, a continuing struggle for 100 percent parity on the value of their product, and the government's blessing to sell at true market worth.

THE BIBLE SPEAKS

BY LAWRENCE W. ALTHOUSE

FOR EVER AND EVER!

Lesson for May 18, 1980

Background Scripture:
Revelation 4 through 5; 7:9-14.
Devotional Reading:
Psalms 24

I cannot read or hear read these words without hearing simultaneously in my mind the stirring music of Handel's "Messiah":

"Worthy is the Lamb who was slain, To receive power and wealth and wisdom, And might and honor and glory and blessing!" (5:12).

"Blessing and glory and wisdom, thanksgiving and honor and power and might be to our God, For ever and ever! Amen." (7:12).

Even reading them to myself, the enthusiasm and ecstacy are infectuous. The writer of Revelation has caught perfectly the dynamics of true worship.

I Was In The Spirit

If our own experience of worship - either private or corporate - is not much like what the writer of Revelation describes, maybe it is because there is an important dimension missing. Actually, this book focuses attention on two different dimensions. The first of these is the dimension of the present. In the early chapters, the letters to the seven churches, we were brought face to face with the present as it existed when this book was written. The "present" was what the writer of the epistles saw in each of the churches: immorality, pagan practices, idolatry, false teachings, wrong leadership, the loss of love and lukewarm indifference. Each of these assessments of the present was sobering.

I think that dimension of present woes - is very much with us in the sanctuary of our church or our private worship. We are aware of it all: political corruption, wars and rumors of wars, injustice, torture, starvation, corruption, tyranny, illness, crime decay and hatred. We can hardly avoid carrying the screaming headlines of our Sunday morning newspaper along into the church sanctuary.

Who Are These?

But there is another dimension that must be viewed side-by-side with the daily headlines, and that is the dimension of "for ever and ever'. Yes, the Soviet Union intrigues against the future of humanity. But also: "Blessing, and honor and glory and might" be to the Lamb "for ever and ever." Yes, the candidates are lying again. But "Worthy is the Lamb who was slain, to receive power and wealth and wisdom and might and honor and glory and blessing! Yes, my next door neighbor died last night of cancer, but in the perspective of "for ever and ever", I will worship God befoe his throne.

In John's vision there was a group of people in white robes. One of the elders demanded, "Who are these....and whence have they come?" And the answer: "These are they who have come out of the great tribulation; they have washed their robes and made them white in the blood of the Lamb" (7:14). They are those who have viewed the present from the perspective of "for ever and ever" and never cease to worship the Lamb of God.

NOW IS THE TIME

By Max Smith, Lancaster County Agricultural Agent
Phone 394-6851

To Note Stage of Maturity

This is the time of the year when various forage crops are cut for silage or for hay. In many cases the real feed value depends upon the maturity of the crop when cut. If small grains such as winter wheat or barley are to be made into silage, it is suggested they be harvested in the blossom stage; this will usually be several days after heading out.

At this time of the year both alfalfa and red clover should be cut in the bud to early blossom stage. All of the grasses are at their peak of feeding value when harvested in the heading stage; do not permit the grasses to head out and get into the blossom stage. If growers will make an effort to cut these forage crops at the suggested stage of maturity, maximum feeding nutrients will be present. We realize that in many cases the weather conditions will be a factor in determining harvest time.

To Consider Livestock Comfort

The hot weather season is approaching. When we get both high temperatures and high humidity, livestock suffer similar to human beings. In the case of fattening animals that are nearing market finish, this stress can be very severe. I suggest that maximum ventilation of the building be used. All windows and doors should be open to get cross-ventilation.

In some cases fans may be used to move the air over the animals. Some hog finishing barns are equipped with water sprinklers, or fogging devices, that keep the floor and the hogs wet during peak hours of heat and humidity. Animals that are outside should have free access to both shade and water. Some attention to the comfort of the animals will reduce stress and possibly some losses.

To Spray Tobacco Beds

The effort should be to prevent blue mold in our tobacco beds, rather than to try and cure the infection after it is present. Last year many growers had severe losses because the infection was carried from the beds into the field. We are told that blue mold is already present in several of our southern states. This means that we could have another serious infection.

We recommend the beds be sprayed weekly with Ferbam (black wettable powder) for the first 3 to 4 weeks; then best control will be experienced by changing to Maneb instead of the Ferbam. If the plants in the beds can be kept free of the infection, then we should have little trouble in the fields. Additional information is available from our County Extension Office, Lancaster, (394-6851). Keep in mind that old saying, "Prevention is much easier than the cure".

To Control Fly Population

With the amount of recent rainfall, no doubt the fly population is increasing on many farms. The best place to start on a fly reduction program is to enforce good sanitation. Clean up the premises and keep them clean at all times When this is the case, there will be less breeding places for the flies

Fly sprays and baits can be used to supplement good sanitation, if needed. There are many fly insecticides available that will kill flies, but materials to use vary according to the place to be treated. Care should be used to prevent residues that will contaminate feed and water. Barns and pens should be cleaned frequently to prevent fly maggot development. Materials such as Malathion or Rabon can be sprayed over manure to prevent fly reproduction. Clean premises and good sanitation practices are the places to start with a fly control program.

THE TRIMMER THAT STARTED IT ALL, IS STARTING IT ALL OVER AGAIN.

INTRODUCING THE WEED EATER® XR-50™

When Weed Eater® trimmers were introduced, they started a whole new era in lawn care

Now, we're starting another era in lawn trimming with the powerful, new Weed Eater® XR 50 gasoline-powered trimmer

The sleek, compact exterior of the XR-50 houses a totally new, lightweight, 26 2cc 2 cycle engine for effortless trimming

Solid state ignition for more dependable starts Precise balance for easy handling And a shaft that can be repositioned with a simple twist So the whole trimmer doesn't have to be turned sideways to edge walks and driveways

The Tap-N-Go™ cutting head feeds out new cutting line when you tap the trimmer on the ground

And since the XR-50 is gas powered, there's no extension cord So it trims and edges places electrics can't

This year, a lot of new trimmers will be on the market But only one that's starting a whole new era in lawn care

The new Weed Eater® XR-50™ trimmer Another reason why if it doesn't say Weed Eater®, it's just another trimmer

THE NEW WEED EATER® XR-50
TRADEMARK

- Powerful, new 26 2 cc 2-cycle engine
- Lightweight
- Trims and edges
- Solid state ignition
- Tap-N-Go™ line advance

Farm donated for 4-H center

HOWARD COUNTY, Md. — A $200,000 gift to the Maryland 4-H Club Foundation will become a perpetual memorial to a former Howard County resident.

The gift, a 135-acre farm in Western Howard County, will be the future site of a Maryland 4-H conference center.

William W. Blaisdell, Cheverly, Md., presented the deed, representing 118 years of family ownership, to James Moxley, president of the Maryland 4-H Foundation, in an informal ceremony on the lawn of Blaisdell's birthplace.

The property is located just off Interstate 70 at Old Baltimore and Frederick Road. Development rights have been legally transferred to the Maryland Environmental Trust.

Development of the 4-H conference center will begin in 1982 with construction of a cental conference facility.

The farm will be developed as an education center in memory of Mr. Blaisdell's mother, Florence Arabella Crook Blaisdell, and "dedicated to the young people of Maryland, to foster their educational opportunities and to build their love of nature and life." Florence Blaisdell was a teacher and a long time Howard County resident. During the 15 years that she taught in the one-room Ridgley school, she rode the 1½ miles to school on horseback. She spent another 15 years teaching in the public schools of New York City.

Berks equine directory off and running

LEESPORT — The Berks County Equine Council, formed last year, to promote equine interests in Berks County announces formation of an Equine Directory.

Scheduled for publication sometime during the summer months, it will list all equine clubs, services, and business organizations in Berks County. The list will be beneficial to new horse owners helping them to quickly find needed services.

The directory will be available for a small fee at tack shops, feed mills, horse related businesses or through the Equine Council.

For more information call or write Penny Heist, Equine Council Director, RD#8319, Sinking Springs, PA 19608, (215) 378-1327.

Pulmonary function testing

LANCASTER — The monthly pulmonary function testing conducted by the Lancaster County Lung Association will be held in the Association office, 630 Janet Avenue, Lancaster, on Tuesday, May 27.

This test is useful in diagnosing early symptoms of lung disease. Persons experiencing shortness of breath, prolonged cough and who are heavy smokers are advised to take the test.

Test are interpreted by a pulmonary specialist and reports are sent to the family physician.

Hours are from 10 a.m. to 5 p.m. Cost is $2.00. An appointment is necessary and may be made by calling 397-5203.

Researchers say community still can produce $1.21 gasohol

LANCASTER — A well-built, well-run small community corn-alcohol distillation plant can produce 200-proof ethanol for gasohol for about $1.21 a gallon when credits are allowed for by-products.

That's almost as cheap as an efficient on-farm plant can distill 190-proof. But many farmers won't need the 'dry' or anhydrous 200-proof ethanol.

These are among gleanings from a report to the U.S. Department of Agriculture by a Kansas research group. The group also found that an efficient and large on-farm still should be able to produce 190-proof corn ethanol for about $1.13 a gallon — net of the credits mentioned — compared to $1.34 for a small on-farm still and $1.63 a gallon if the fuel is distilled with a farmer's "pot still" — a commercial model of the moonshiner's still.

Researchers qualify their estimates carefully, stressing efficiency and proper management and the sensitivity of their estimates to changes in prices of corn and other ethanol sources as well as distillery byproducts.

The estimates show the farm opertor paying less for his ethanol 'feedstock' — in this case, corn — than the larger distiller would pay. A 56-pound bushel of shelled corn yields about 2.5 gallons of ethanol in a highly efficient plant. The report says the farmer can estimate his corn feedstock cost at $1 per gallon, while the community distiller would calculate it at $1.10 for each gallon of ethanol.

Milton L. David, director of the group that produced the report, said the study showed, "If the boiler in a plant has an efficiency of 80 percent, it uses about 100,000 Btu of energy to produce dry stillage — the animal-feed byproduct — and one gallon of anhydrous or 200-proof ethanol that has somewhat less energy value — 76,152 Btu.

But to produce 190-proof ethanol and wet stillage would require only about 40,000 Btu — about 40 percent of the total energy needed for the five steps for higher proof ethanol and dry stillage."

The report, by Development Planning and Research Associates, Inc of Manhattan, Kans., includes an eight-page "checklist of design and performance criteria for small still alcohol plant loan applications." Prospective ethanol producers might use it in seeking funds from private lenders of USDA's Farmers Home Administration.

FmHA has about $10 million this fiscal year for direct farm-ethanol loans to farmers who can't obtain credit elsewhere. FmHA is authorized to guarantee as much as $100 million in business-and-industry loans to distillers by September 30.

The multi-section report, containing about 220 pages, is entitled "Small-Scale Fuel Alcohol Production" — stock number 001-000-04124-0 — and may be obtained for $6 per copy from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20401.

Of the report, David said, "It covers suitability of ethanol in spark ignition and diesel engines, fuel use on and off the farm, principles of ethanol production, use and cost of feedstock, by-production utilization, production plant characteristics and costs to produce ethanol. Potential uses of fuel ethanol include powering farm and commercial stationary engines, grain dryers and boilers, but its most practical near-term use will be as fuel for mobile engines.

"Spark ignition engines would be most easily converted to ethanon use because they can burn gasoline or 200-proof ethanol mixed with gasoline — gasohol," David said.

"Next easiest would be engines modified to burn lower-proof ethanol in lieu of gasoline. Still another approach would be engines that could burn either lower-proof ethanol or gasoline by having dual fuel systems.

"The value of ethanol in a spark-ignition engine is increased if the engine's compression ratio is increased from 8 to 1 to about 12 to 1. Conversion costs would vary greatly — from $700 to $2,000 or more.

"As for diesel engines, most feasible fuel for the near term is 100- or higher-proof ethanol injected into the engine air intake just upstream from the turbocharger. This idea is getting most attention now because of the availability of a conversion kit sold by M&W Gear Company, Gibson City, Ill."

Ethanol can be produced from many farm crops and wastes. The report suggests how farmers and others may assess suitability of various feedstocks, classified into three groups: those mainly consisting of starches — currently most often considered — sugars or cellulose.

Land sales for development can bring farm problems

NEWARK, Del. — Farm owners considering the sale of part of their land for building lots, shopping centers or similar development may wish to think about future uses of the land they retain.

Normal farm operations may be considered nuisances by your new neighbors, warns University of Delaware extension pesticide specialist John McDaniel. Dust resulting from tillage procedures, noisy farm equipment, and odors from poultry and livestock operations, have all caused complaints in the past.

Recently the U.S. Environmental Protection Agency has begun to monitor pesticide drift in parts of Arizona. The area involved was predominately farmland until recent times. Then residential construction boomed. With it came shopping centers, schools, roads, parks and all other improvements needed to give new arrivals the services they needed.

Cotton is the principal crop grown on the farms in the area. It is a standard practice to apply a defoliant chemical to remove the leaves before machine-harvesting the cotton. Some of the defoliants used are irritating and have a disagreeable odor. The newcomers complained. National television came on the scene, followed by a congressional committee, and the situation became very controversial.

As a result, the EPA has published what they call an advisory opinion covering application of defoliants to cotton in Arizona. This Advisory Opinion spells out methods for minimizing drift of pesticides. After the monitoring and exposure studies are complete, more stringent regulation may be announced. Application by ground equipment is also clearly covered in the advisory opinion.

Sometime in the future the application of pesticides near residences, schools, highways, shopping centers, and other sensitive areas could well be restricted. Such restriction would have a serious effect on uses which could be made of fields lying next to such sensitive areas, notes McDaniel.

This situation is a possibility farmers need to keep in mind as they consider selling off part of their land for strip development. Judging by events already experienced in the long run such development could seriously affect future farming operations on their remaining land.

Lebanon Co. farmer fights for equal rights

BY SHEILA MILLER

MT. ZION — "We're far from done fighting, even though it's costing us thousands of dollars," said Kenneth G. Grumbine after hearing the decision of Bethel Township Zoning Hearing Board members on Wednesday.

The Wednesday evening meeting at the municipal building in Fredericksburg found close to thirty people listening to the arguments of three lawyers involved in Grumbine's appeal that the subdivision plan of Paul and Mary McCorkle be disapproved.

The three board members, after hearing a lengthy disortation by the Grumbine's attorney, unanimously voted against the Lebanon County farmer in favor of the subdivision plans.

The townhip hearing came about as a result of a ruling by Lebanon County judge G. Thomas Gates on April 17.

After having been told by the zoning board that it did not have jurisdiction to hear the appeal of the Grumbines on the approval of the subdivision plan, the Grumbines decided to take the local township zoning board to court.

All witnesses were served subpoenas and were present that Thursday morning, but they were never called on to testify. After a recess, Judge Gates ruled that "Mr. and Mrs. Grumbine alleged that they are aggrieved by the action of the governing body of Bethel Township in approving the development plan of the McCorkles. Therefore, their appeal to the Zoning Hearing Board was proper under the Municipal Corporation Code above referred to, and the Board erred in refusing to hold a hearing."

The Grumbines and their attorney packed up their piles of paperwork and waited for May 14 for the hearing they requested months and one courtcase earlier.

The formal rulings by the township do not seem to discourage the Lebanon County farm family, however.

Kenneth and Pauline have been fighting this neighboring development for over a year and a half. They've attended township meetings and planning meetings each month, hitting sometimes two meetings a month in order to stay on top of the situation.

The Grumbines told **Lancaster Farming** the trouble started in July, 1978, when the neighboring farm, owned since 1955 by Lydia Muth, was sold to McCorkle.

According to Grumbine, McCorkle, called a gentleman farmer by some, bought the 14 acre property for $78,500, and would have probably run it up into the $100,000's.

Grumbine said a number of his friends told him he should buy the little farm when it went on the block, but he said he didn't feel it was worth the price.

Grumbine, in his 50's, and his father before him, farmed the small farm and was familiar with what it could produce.

"I was hoping someone who wanted a farmette would buy it, and keep it as a farm," he said. "Mrs. Muth wanted to keep the land in farming—she wouldn't even sell her children lots."

But McCorkle, who is a home builder on the side, bought the property and started planning an eight lot housing development. The plans for septic systems, erosion control and storm water management were submitted to the township and the Lebanon County Planning Commission for review.

The plans did not just breeze through, said Grumbine, because he and his wife fought the development, sometimes single handedly.

They watched and witnessed a civil engineer doing the percolation tests for the lots, said Grumbine. "We talked to John Diviney while he was there, and he told us the holes all failed for conventional and sand-mound sewerage disposal."

Not satisfied with the report of that engineer, McCorkle hired a new firm. Surprisingly, the report did an about-face and now the test holes passed.

The new engineering crew did not condone the "inquisitiveness" of Grumbine, however, and ordered him off the property while they did the testing. "They put up no trespassing signs, but I watched them through my field glasses."

According to Grumbine, he watched the new crew for four hours, and after they initially filled the test holes with water, no more was added in the three and a half hours they were testing.

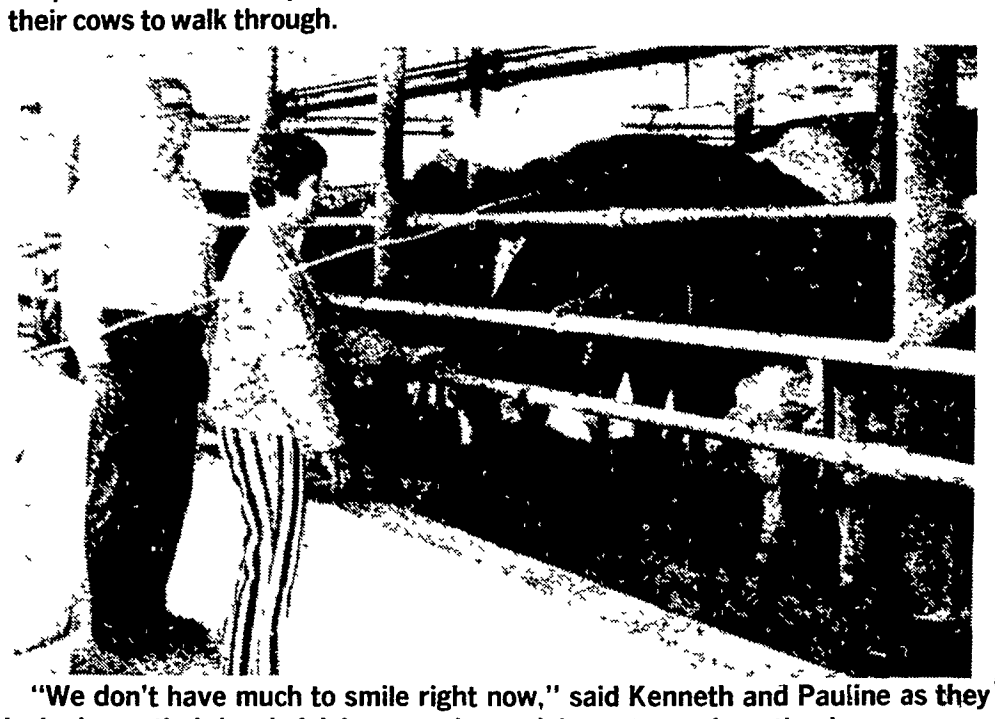
From the start, Grumbine said, he tried to work with the Soil Conservation Service's Karl Hellerick "so that McCorkle would keep his water on his side, but Hellerick wouldn't cooperate. He said he'd cooperate with the developer, but not both of us."

Grumbine had cooperated with the former owner, Lydia Muth in 1976 when they installed a diversion to control water from his fields and her garden.

Grumbine had worked with SCS in 1960 when he got their help in installing tile drainage in his meadow. "Now, what good has draining that meadow done. All the water from the development comes across the road and makes my meadow a swampy mess," said Grumbine.

"My wife does 99 percent of the milking by herself. That's the reason why we did the tiling in the first place, to get rid of the mud so the cows wouldn't be dragging their bags through it. She has to wash each teat and wipe each one with a separate towel. But with all their water, what was the use?"

Kenneth and Pauline Grumbine, R2 Myerstown, survey the stone ditch that brings water from the McCorkle retention basin (behind the red barn) along the property line and finally dumps it into a culvert under Long Lane. The water keeps the Grumbine's pasture and area in front of the barn a "muddy mess" for their cows to walk through.



"We don't have much to smile right now," said Kenneth and Pauline as they looked over their herd of dairy cows, housed downstream from the dam.

Grumbine is not only upset that the water is making his meadow back into a swamp, he said he is also afraid it will get into his barn.

The retention basin that was installed on the McCorkle property outlets directly toward the Grumbine barn, with both emergency spillway and pipe outlet aiming toward his building like a gun.

Since the retention basin

THINK OF IT AS A GLASS OF WATER THAT WON'T BREAK OR GO DRY.

Simple, bright ideas make Shenandoah products better Like our valves and troughs For proper dependable watering, the valve simply has to work full time So our highly sensitive water level control makes sure the water doesn't go down And fewer moving parts mean there's less chance of it breaking down Then there are the little differences we build in like heavy duty frames and stainless steel troughs that make our waterers so durable And your job so easy

At Shenandoah, we make the best products we possibly can And that's a bright idea

Shenandoah
Bright ideas in farm equipment.

(Continued from Page A14)

was built, Grumbine says there is ten times as much water pouring down between his barn and the McCorkle property. He added there was never a problem with the Muth diversion.

Grumbine recalled that in 1978, the township installed a culvert under Long Lane, the township road that runs in front of his and the McCorkle property. "I never dreamed they'd come and put a waterway there."

But, that's what happened. The development plans exits the water from the retention basin into a stones swale that dumps into the culvert on the McCorkle side of the road. When the water leaves the pipe, it spreads out in the Grumbine meadow.

Sifting through the piles of correspondence and records of telephone conversations they have been recording since January of 1979, the Grumbines pull out two pictures of their farm.

The one photo, taken in 1970 when the adjacent property was owned by Lydia Muth, shows a well maintained, white board line fence between the two properties.

In the photo taken in 1979, this line fence has been partially torn away. According to Grumbine, McCorkle ripped out the line fence originally built by the Muth's, and refuses to replace it.

"I'm afraid that when children move into the houses next door, they might wander into my barn cleaner which is 12 feet from the property line. Then they'll get hurt and it will be my fault."

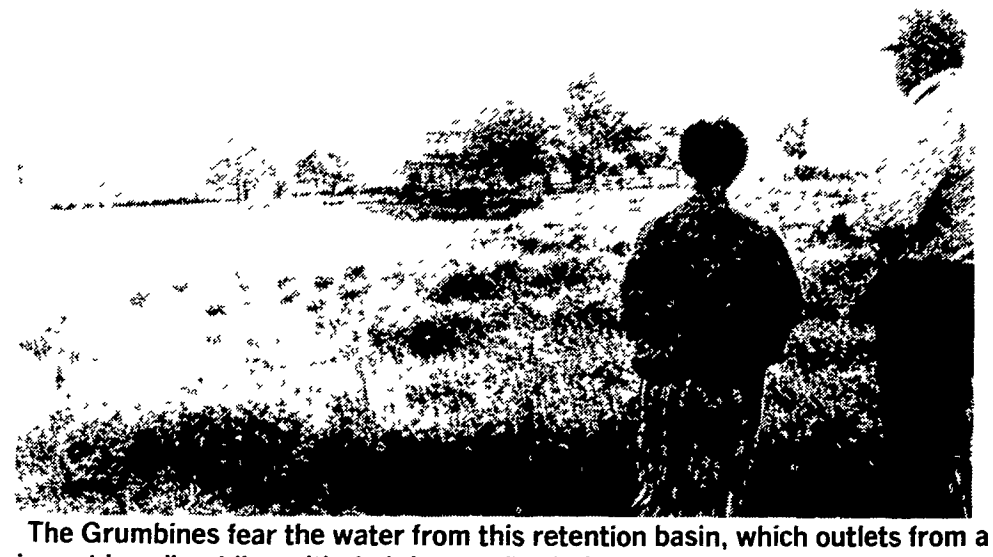
Grumbine recalled an incident he had last summer with children from Mt. Zion. "They came into my meadow and built a tree house. I had a hundred steers in there at the time They took one strand of electric wire and fenced an area around the tree off, and then teased the steers. They had one steer so mad, Pauline couldn't get near it.

"I left it go, because it's no use talking to their parents—they just get mad. We just picked up the hammer and nails they left behind.

"But, I want the fence back to keep the children away from my barn. The house owners don't want my cows in their yards, and I don't want their kids in my fields. I'm responsible for the damage my cows do if they get out, and it seems I'm responsible if children get into my pasture and get hurt."

Grumbine told of a recent incident where neighboring children were catching butterflies in his pasture and barley fields. "I found their jars of butterflies in the barley and their net in the pasture one time. Another time I found the kids in the pasture surrounded by snorting steers and bulls. Why they could have been killed and are too dumb to realize it.

"I paddled them and sent them home. Then I got a call from their father and he was mad and threatened me if I paddled his kids again. I told him if I caught them in my fields again, I'd paddle them again."



The Grumbines fear the water from this retention basin, which outlets from a pipe set in a direct line with their barn, will wind up in their buildings rather than in the ditch.

When asked why they were willing to keep spending the thousands of dollars its costing him to fight the next-door development, the Grumbines both said they want to prove that if Lebanon County makes rules and regulations, everyone must abide by them.

"I'm that disgusted with the damn builders. If a farmer wants to put up a house for his children, the county makes him subdivide and gives him a hard time.

"The Lebanon County Planning Commission's Earl Myer told us that he's for development, and the farmers can farm what's left after the road frontage is built-up.

"Why, the town people are trying to drive us out of the area. We spent 30 years of hard labor trying to get a nice farm, and we're not going to buckle—it's time someone starts preserving farmland.

"People who have had problems with developments before are all for us, and those who have never had a run in with a development think we don't know what we're doing. But, we're far from finished fighting.

"Farmers need to stick together. It's going to get to a point where we won't have any food.

"But, it seems they're only interested when it hits them. Farmers have to learn to stand up for their rights instead of moving away from problems. We're not asking for more than equal rights."

Grumbine recalled a fight he had with the townhip officials last year when they tried to pass an ordiance allowing homes to be built within 20 feet of the property line, but a dairy barn had to be 200 feet away. "I'll stay away 200 feet," Grumbine said, "but it has to be equal."

The Grumbines love farming, milking 36 Holsteins, raising 100-400 beef animals, and farming over 280 acres of land,and say they don't intend to retire until they are no longer able to do the work. And, in anything concerning their farm that they've worked since they were married, they're no quitters.

Although they said they were disappointed with the decision of the three township board members, who themselves grew up on farms, the Grumbines are not defeated and said they intend to spend thousands more if they have to in order to prove their point to the county and township officials.

HEY CHRIS, DO COWS KNOW THE WORD GET-UP!?
4-H IS GREAT FOR PARENT-CHILD RELATIONSHIPS. AND THEY CAN DEVELOP AT BOTH ENDS OF THE COW!

Lancaster County 4-H clubs

Newly elected 4-H officers to train in Lancaster

LANCASTER — Have you just been elected to one of the following 4-H club offices: president, vice-president, secretary, treasurer, news reporter, game leader or song leader?

If so, you are invited to attend the 4-H Officer Training Workshop Friday, May 23, at 7:30 p.m. at the Farm and Home Center.

Workshops will be offered in all areas of club office for you to develop your skills in leadership.

Contact Nancy Meyers, 4-H Agent for more information at 717/394/6851.

Lancaster to hold new 4-H leader training

LANCASTER — All adult 4-H volunteer leaders, with no previous experience in the 4-H program to those who are beginning their third year as a 4-H leader are invited to attend the Leader Training Workshop on Wednesday, May 21, 7:30 p.m or Thursday, May 22, 1-3 p.m. at the Farm and Home Center.

Topics of discussion will be: expectations of a 4-H Leader, objectives of the 4-H Program, the 4-H Meeting, and 4-H Opportunities.

For more details contact Nancy Meyers, 4-H Agent, 717/394-6851.

Lancaster FFA farm management contest held

ELIZABETHTOWN — Contestants from county FFA organizations gathered at Elizabethtown High School Tuesday to compete in a county-wide farm management contest.

Elizabethtown topped the field in both the individual and team competition. *Placings in individual competition* were: 1. Jay Garber, Elizabethtown; 2. Darrell Leahman, Elizabethtown; 3. Tom Lytle, Elizabethtown; 4. Tina Bucher, Solanco; 5. David Holzhauer, Solanco; 6. Ken Swope, Elizabethtown; 7. Bob Snyder, Elizabethtown; 8. Webster Keller, Elizabethtown; 9. Bob Cahall, Elizabethtown; and 10. Tom Wood, Manheim.

In the team competition, Elizabethtown's number 2 team consisting of Jay Garber, Tom Lytle and Darrell Leahman took first place.

Solanco's team of Gary Eberly, David Holzauer and Tina Bucher placed second.

Also placing were: 3. Elizabethtown's number 1 team; Manheim FFA; and Ephrata's FFA which participated with an incomplete team.

Berks area FFA salesmanship contest judged

READING — The Berks-Lebanon-Schuylkill Area FFA salesmanship contest was held recently.

Dawn Shirk, Cedar Crest took first place honors. In the contest, the students were required to sell at least 3 agricultural products to a prospective customer. A sales slip was completed, and the sales tax computed for the items sold. Contestants were scored on personality, knowledge of the products, selling process and the sales slip.

Other students placing in the event were: 2. Tony Piergallini, Northern Lebanon; 3. Glenn Wenger, Elco; 4. Dale Zimmerman, Northern Lebanon; and 5. Todd Benjamin, Kutztown.

Informal hearing of PMMB, Dairylea ends in no agreement

HARRISBURG — The Pennsylvania Milk Marketing Board met with representatives of the Dairylea Cooperative on Thursday in an informal conference.

PMMB had told the cooperative to show reason why the Board should not suspend or revoke its license to sell milk in Pennsylvania.

Earl Fink, executive secretary of PMMB, said the conference was called to try to resolve an alleged violation of the state milk marketing law in connection with Dairylea's agreement with A&P to sell processing and packaging of milk from Dairylea's Scranton plant.

No agreement was reached, said Fink, and no date has been set for a formal hearing of the case. "It will probably move to a formal hearing in another few weeks," said Fink.

At Thursday's conference. Dairylea presented additional information on their costs, noted the PMMB executive secretary. These figures will have to be checked by a PMMB audit, he said, but they were submitted by the cooperative as evidence.

Dairylea is charged with violation of Section 807 of the Milk Marketing Law

That section makes it illegal to sell a product or service below the cost of production.

Specifically, Dairylea is charged with selling services from its Scranton plant to A&P under cost.

Should Dairylea be found guilty at the formal hearing, the Co-op faces two potential consequences· it could have its Pennsylvania license completely revoked, or it could have the license suspended for a given number of days.

In similar cases in the past, suspension has been the typical verdict.

The state's Milk Marketing Law allows any dealer to buy back its suspension at the rate of $50 a day. The funds from the fine go to the Milk Marketing Board fund.

If the Co-op should be found guilty and should select to buy back its suspension, the action should not have any effect on Dairylea members other than the revenue loss. Dairylea would not be forced to give up its contract with A&P.

Are termites bugging you?

MEDIA — Termits and flying ants can be found in the same building, and each group may produce swarms at various times of the year. Before you push the panic button observe the type of damage that has been done.

According to James McKeehen, Delaware County Extension, one distinct feature of termite damage to wood is the lack of sawdust as evidence. Termits actually eat the wood.

Another clue is mud often found in association with wood. Termites use mud to seal cracks in weakened timbers. They also build mud-like shelter tubes within or on foundation walls, which they use as a shortcut back to their home in the soil. However, destroying these tubes will not prevent termites from entering the building.

Freedom of passage from soil to wood and back again determines whether or not termites can successfully attack a building. A successful attack also depends on the kind of building construction practices used. The following factors make a building most susceptible to termite attacks:

Wood in the soil and near the house. Stumps, branches, and other woods debris should be removed from the site before construction is started. This helps destroy colonies already at the building site.

Wood buried around the foundation walls. Never leave scrap lumber under buildings or porches.

Soil moisture. The outside soil level should be at least 6 inches below all woodwork. Rain water should be directed away from the house. Leaky, defective plumbing also attracts termites.

Foundation walls of stone, hollow concrete block, hollow tile or brick that can crack allowing termites to pass through.

Not enough space between floor joists and soil under the unexcavated part. There should be at least an 18 inch clearance. Plenty of cross-ventilation is also needed.

Earth-filled or masonry porches and steps of flagged terraces on the same level as first floor sills. About three-fourths of termite trouble in Delaware County comes from this type of construction.

Wooden porches or steps. The bottom step should rest on a poured concrete base that is at least 6 inches above the soil.

Wooden frames of cellar or basement windows. Use steel frames or factory treated wooden cellar window frames with a soil level or a window well 6 inches below the window casing.

Wooden frames and doors leading to cellars from outside stairways and garages.

The use of wood in finishing basement areas.

Modern slab-constructed homes with wood partition walls. Termites can go through cracks in the slab, plumbing, and other utility holes in the slab, or through expansion joints.

Lancaster Farming

YOU'VE HEARD THE TALK.

There's a better way to dry grain. It's called CHILLCURING™ because it means CURING without heat. Here's what the talk is all about.

THE GRAIN

Every kernel of grain is alive when it comes out of the field. It is a seed, able to grow because it has the ability to take on moisture Likewise, it can be kept in a state of preservation by removing the moisture already in it

But by heating the grain to dry it, the seed life is destroyed.

By *removing* heat and moisture from the grain, it becomes dormant, and stays alive Then it can ripen to full weight, losing only water while keeping valuable protein, starches and sugar.

THE SYSTEM

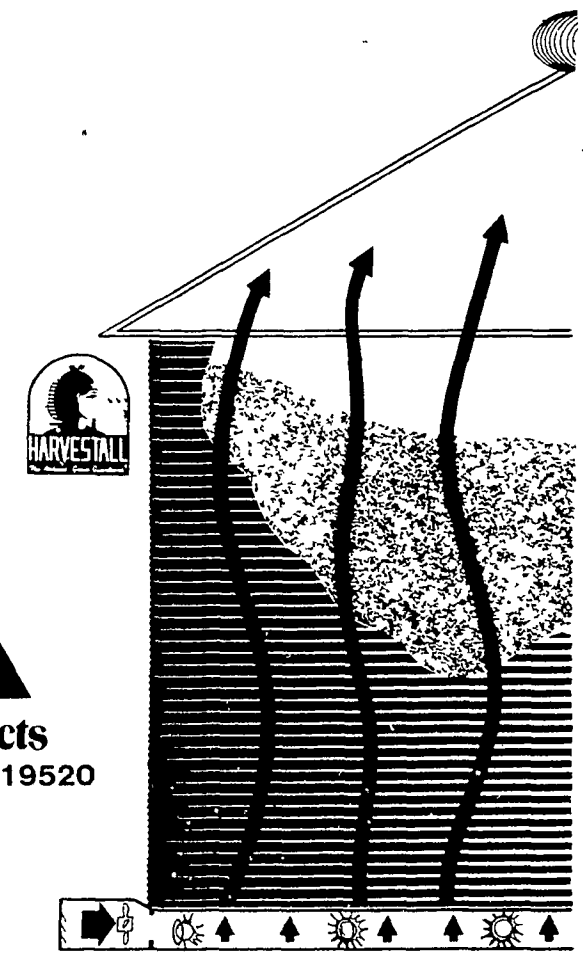
It's simple. Grain goes from the field right to the bin. With the unique AIRFRAME™ and AIRFLOOR™ the grain rests on a solid bed that allows maximum ventilation.

Clean dry air is the best curing medium for the grain GRAINLAMPS™ provide electric sunshine, cleaning and drying the air beneath the floor, before it passes through the grain.

Fans force air under the floor Rising through the grain, this dry outside air carries away moisture and heat

At the peak of the bin a jumbo 40" turbine, the WHIRLCOOLER™, puts nature to work for you Wind and rising air keeps it turning, venting the system naturally.

A special HARVESTAT™ Control System monitors the curing process. A simple setting controls the GRAINLAMPS™ to make use of free, natural air.



Advanced Ag Products
RD 2 Box 174 Elverson, Pa. 19520
215-286-9118

THE FACTS

1. You can't beat Nature. HARVESTALL GRAIN CHILLCURING™ uses the same elements that ripen and preserve grain if left to itself: free flowing air and infra red rays (sunshine).

2. CHILLCURING™ has been tried and proven in 17 states on over 3000 farms. The research is in: CHILLCURING™ WORKS!

3. The CHILLCURING™ system uses only the electricity to power fans and lights, using about 1½ KW hrs. per bushel. Compare that cost to other systems that use increasingly expensive fuels to get disappointing results.

4. The grain goes from the field to the bin and stays there till you need it. Save time and money at harvest with the one step HARVESTALL CHILLCURING™ and storage system.

5. If you're in the market for grain storage, you owe it to yourself to look further into HARVESTALL GRAIN CHILLCURING™

Pseudorabies

(Continued from Page A1)

Field investigators are continuing the time-consuming, painstaking task of visiting and revisiting farms to try to trace the source of the disease, Dr. Cable explained.

In farm visits, questioning is projected in both swine marketing directions, including farms from which swine were purchased, as well as places to which pigs have been sold.

The job of tracing marketing activities can become quite widespread, according to Dr. Cable.

For example, one of the early infected farms had purchased 16 different lots of pigs since the latter part of 1979. These pigs had come from approximately 100 different farms and not all of them were in Pennsylvania.

"This illustrates the magnitude of what is involved in trying to trace the disease," Dr. Cable said.

In addition to the geographical spread of the investigation, tracing efforts move back through swine generations.

It was found recently that two of the latest herds in which pseodorabies had been confirmed had sold pigs to a breeder who, in turn, had sold stock to one of the originally infected farms.

"In a situation like this, we try to find a cross-link that may narrow down the source of the disease," Dr. Cable explained.

"If something shows up positive from lab tests, we follow through with more tracing. If results are negative, then we must try and move in a new direction."

There have been no additional acute symptoms of the disease resulting in the death of pigs or other animals since the original outbreak of pseudorabies in southeastern Pennsylvania earlier this year.

Dr. Cable said swine producers should continue to follow management practices designed to help avoid pseudorabies infection.

Only test negative breeding animals from pseudorabies free herds should be purchased.

All breeding animals added to the herd should be isolated for 30 days and then retested.

All show and exhibit animals returned to the herd should be isolated and retested like new herd additions.

Keep visitors to a minimum and provide sanitized boots and clothing for people who must enter production facilities.

Keep dogs and cats away from hogs and control rodents.

Don't have swine mingle with other livestock.

Consult a veterinarian if unexplained losses or sickness occur.

Consider waterways for healing gullies

LANCASTER — Gullies can form almost anywhere in crop fields. And once they're started, they're hard to get stopped. One of the simplest control measures is the grass waterway, says Ed Petrus of the Soil Conservation Service.

Gullies can be bladed in with bulldozers or even plows, and then seeded with a hardy grass such as Reed Canarygrass, he adds. Care should be taken to keep runoff out of the newly healed waterway until the grass is well established, notes Petrus.

Waterways must be wide enough and deep enough to handle all expected runoff without damage to the sod. The dimensions depend on: 1. the size of the watershed; 2. the slope; 3. the ability of the soil to absorb water and 4. the vegetation.

The size must also depend on the size of farm equipment. They mow and occasionally cross with farm vehicles. Waterways should never be used as roads, Petrus stressed.

Once established, waterways must be properly maintained. This includes liming and fertilizing, mowing, and reseeding as necessary.

Farmers who are using pesticides or herbicides intensively must take special care to avoid spraying waterways.

Grass waterways, as an added bonus, are good places for certain ground-nesting birds and other wildlife.

For more information or assistance contact the Soil Conservation Service.

ZERO TURNING RADIUS MOWERS
DIXON ZTR

INTRODUCING.. The Newest Innovation In Grass Mowing
"The Energy Saver"

DIXON. ZTR. mowers save your time at every turn.

DIXON ZTR mowers save time every place ordinary mowers waste it: trimming corners, around trees, at every turn! That's Mowbility

Owners tell us that Zero™ Turning Radius saves up to half their mowing time, and sometimes even more. They tell neighbors how easy the mower operates, how they enjoy using it, what a great job it does — and most of all, it leaves them mower time for fun.

But don't take our word for it; try it yourself. A few quick turns to get the feel of its simple hand levers, and before you know it you'll turn yourself into a DIXON owner! Come in for your free test drive at any one of these participating Dealers

DEALER INQUIRIES INVITED

Tornado rips roof off

(Continued from Page A1)

Hoover, Pleasant Hall, employee of Chambersburg Livestock Sales, Inc. operated by Milton Silvers of Chambersburg, the regular auction will take place as always on Thursday.

"As long as we have electricity we will have the auction. Just hope it doesn't rain, or a lot of water will get into the building" said Hoover. He stated that damage to the livestock barn had not yet been estimated.

Many of the businesses along Aayne Ave. will be closed for several days for repairing. Damages estimates for these businesses were still being calculated on Tuesday and were expected to be very high, possibly as high as $1 million in the borough of Chambersburg alone.

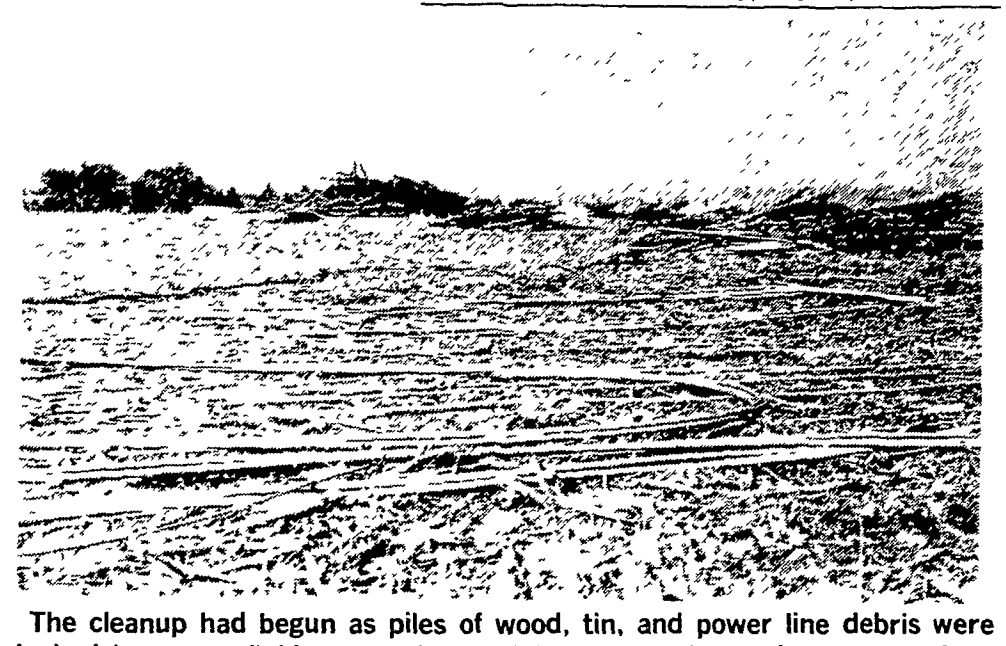
Farm damage throughout the county was mainly confined to roof damage, small sheds being capsized, and trees being uprooted.

South of Chambersburg, along the Mill Road, two houses were completely destroyed and damage was sustained by seven other homes and an electric transformer. West of Chambersburg, in Fayetteville, severe damage wrecked St. Paul's Lutheran Church where half the roof was blown off.

Area weatherman Robert Sellers recorded a rainfall of .35 inches and winds up to 60 mph in the approximate ten minute period that the storm lasted.

A National Weather Service spokesman in Harrisburg verified that Chambersburg had been hit by a tornado on Monday, the first officially recorded in 100 years in the area.

Injuries were limited to minor shocks and cuts caused by flying glass from windows and cars.



The cleanup had begun as piles of wood, tin, and power line debris were stacked in a corn field across the road from several area businesses along Wayne Ave. in Chambersburg.

Stock up on pork while the price is right

DES MONIES, Ia. — Consumers can expect pork to continue to be a good buy throughout 1980. Pork is a good value from both the economical and nutritional standpoints, according to Ann Norman, National Pork Producers Council.

"Currently, there are large supplies of pork available to the consumer. For example, in April, there will be 10 to 12 percent more pork available than last year. And the latest report from the USDA suggests that this will continue throughout the year. This bountiful supply of pork at the supermarket means lower prices for consumers and an excellent opportunity to stretch the food dollar," Norman said.

She suggested consumers check the buys on pork ribs — spareribs, country-style ribs and back ribs. You can freeze these pork cuts and use them throughout the approaching cookout season.

You will also want to check the buys on a newcomer to the selection of popular pork cuts — ground pork, Norman said. Both versatile and economical, ground pork can be served in tacos, salads, stews, loaves, casseroles, patties, meatballs and sauces. And ground pork burgers are a natural for the outdoor grill, Norman said. And she offered this buying tip — ground pork unlike sausage, is purchased without the addition of any seasonings.

From the nutritional standpoint, today's pork is leaner and has about 70 calories per ounce of cooked lean meat. It is an excellent source of high quality protein — containing all of the essential amino acids necessary to build, repair and maintain body tissues.

Pork is also an excellent source of the vitamins niacin, thiamin, riboflavin, B-6 and B-12. In fact, it is the leading dietary source of thiamin, containing three times as much as any other food, Norman said. Pork is also an important source of the mineral iron which is vital in the formation and maintenance of red blood cells and the prevention of anemia, she added.

With pork's combination of economical and nutritional value, Norman suggested putting some pork in your freezer for future use. Pork can be frozen just like any other meat, she explained. Wrap meat tightly with a moisture-vapor-proof material and label packages with the name of the cut, weight (or number of pieces) and date placed in the freezer. Store at 0° F. or less.

Fresh cuts can be kept up to six months for best flavor. Keep ground pork frozen for one to three months and cured products, such as bacon and ham, for up to two months for best flavor.

Pork producers publications available

DES MOINES, Ia. — Copies of proceedings of two National Pork Producers Council events are now available, according to the NPPC.

Anyone can obtain copies of the two publications, the proceedings of the Reducing Costs of Producing Porks symposium, and the proceedings of the seminars held during the American Pork Congress.

Dr. David Meisinger, NPPC Director of Research and Education, said, "In these times of low market prices and high production costs, it is essential for the pork producer to get all the valuable information he can.

"In these two books, there's current production information as well as information on feeder pigs, swine health, government action and energy alternatives for pork producers."

Copies of each publication are three dollars. Send your request, along with a check for the correct amount, to: National Pork Producers Council, P.O. Box 10383, Des Moines, IA 50306.

Electronic horseshoe to aid equine treatment

BY DICK ANGLESTEIN

KENNETT SQUARE — An "electronic horseshoe" is being developed as a space-age research tool at the New Bolton Center to aid in the study and treatment of equine leg injuries.

The horseshoe will be used in both the orthopedic treatment of injuries and to study the effect of drugs on lameness, according to Dr. Lawrence Soma, member of the research team at the University of Pennsylvania's Veterinary School facility.

The electronic horseshoe actually is comprised of two shoes made of hardened aluminum with an overall thickness of about a quarter-inch. It is a little heavier than a normal shoe.

The inner half of the shoe attaches to the hoof and the exterior portion can be bolted to it. Between the two halves are sandwiched four sensors, donut-shaped transducers smaller than a dime which can be monitored through a telemetry system.

"Two of the sensors are positioned in the front of the shoe and two in the back portion," Dr. Soma explained.

"With the shoe, we can study a horse in free-ranging movement and record the effects of an injury on such movement as compared to that of a healthy leg.

"It will permit us to objectively characterize the footfall of a horse in each of the legs."

Measurements can be made not only of the amount of pressure exerted by a 1000-pound animal on the shoe, but the distribution of such pressure.

Some questions which the studies hope to answer:

How long is the foot kept down?

When does the animal start to push off?

How long is there weight on the heel as compared to the flat part of the foot?

"Also, we'll be looking at the effects of drugs on lameness," Dr. Soma said.

"If a horse is lame and given a drug, specifically how does it affect movement?

"We can measure how weight may be shifted when an animal becomes fatigued.

"With the shoe, we'll be able to study a specific

(Turn to Page A21)

Mockup prototype of new electronic horseshoe is explained by Dr. Lawrence Soma, of New Bolton Center equine research staff. In the background, orthopedic shoeing activities are conducted in the Center's farrier shop.

Face mask held by Dr. Soma is used in studies to measure such things as oxygen consumption rates by a horse during exercise.

Electronic horseshoe

(Continued from Page A20)

animal more carefully and collect more definitive data."

Use of the horseshoe is an outgrowth of research involving a stationary force plate.

With the plate, an animal walks across it and measurements can be made. In the shoe, the force plates have been built into it, providing a mobile means of making measurements during free activity by the animal.

Research with the new horseshoe and the force plate are part of far-ranging studies being conducted at New Bolton Center under the auspices of the Pennsylvania Horse Racing Commission.

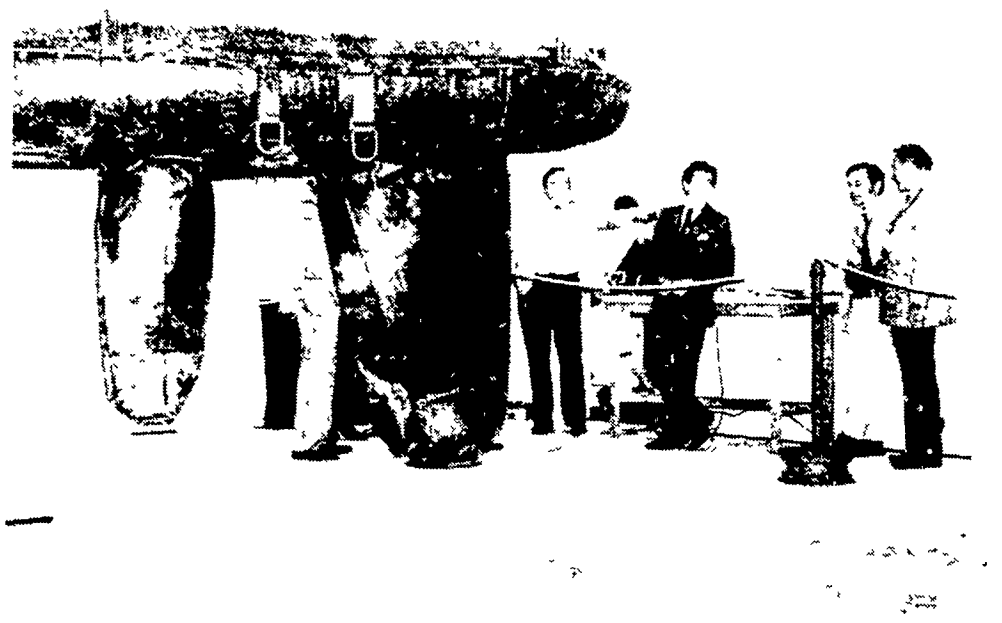
Studies of the effects of drugs on horses are being conducted in conjunction with West Chester State College. Detection of the drugs is centered at West Chester; while the effects of the drugs are examined at New Bolton.

"We analyze the concentration of drugs in the blood and determine how long they remain in the plasma," Dr. Soma explained.

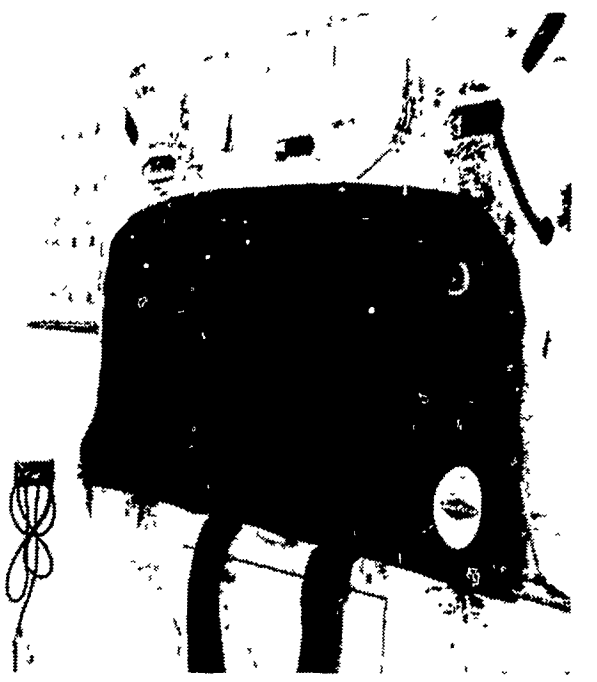
"Work is done in finding the metabolic byproducts of various drugs.

"Since a drug often is broken down rather rapidly, identification must be made through these byproducts.

"Many of the substances being studied are human drugs, but horses handle them much differently."



Recovery pool is part of the equine exercise areas. The pool and treadmill are used both to check stress in animals and for recovery therapy.



Surgical facilities for large animals include the operating table, which is positioned upright to facilitate securing the animal and then tilted horizontally for the operation.

Another phase of research involves pulmonary hemorrhaging, a condition that is peculiar to horses.

Often as the result of hard running, particularly in thoroughbreds, a slight amount of bleeding can result in the lungs and windpipe.

"In this phase of our research, we'll be making on-track studies," Dr. Soma said.

"We want to see how many horses sustain such bleeding and whether it might be a hereditary condition."

Still another area of investigation involves a new and complete look at the horse as an athlete being conditioned during training.

These studies, termed exercise physiology, are the specialty of Dr. G. Frederick Fregin, of the New Bolton staff.

"We closely studied five horses over a 10-week training period," Dr. Fregin explained.

"These were the first such studies actually conducted on horses during sustained exercise periods."

Areas of investigation and measurement during the exercise studies included changes in heart rate, effects on blood pressure, production of lactic acid and specific amounts of oxygen consumption by the animals.

Heretofore, equine training has been largely a matter of intuition, it was explained, and the exercise studies are supplying

Dedication held at New Bolton

KENNETT SQUARE — The George D. Widener Hospital for Large Animals was dedicated at ceremonies at New Bolton Center on Monday, May 12.

The new Widener Hospital of the University of Pennsylvania's School of Veterinary Medicine includes the existing Large Animal Clinic and a new addition donated by trustees of the George Dunton Widener Estate.

The new addition on the 1000-acre veterinary research and treatment facility near Kennett Square includes a teaching laboratory and lecture hall.

By providing expanded teaching facilities the new addition will alleviate crowded conditions and improve patient care in the hospital, according to Dr. Richard A. McFeely, Associate Dean for the New Bolton Center.

Participating in the dedication ceremonies were University of Pennsylvania officials and F. Eugene Dixon Jr., nephew of the late George D. Widener and trustee of the estate.

Among the Penn officials were Dr. Robert R. Marshak, Dean of the School of Veterinary Medicine; Dr. Thomas W. Langfitt, Vice President for Health Affairs; and Martin Meyerson, University President.

Dr. Marshak traced the development of New Bolton Center since its beginnings in 1952.

"From the start, this center has developed as a cooperative effort between the private and public sectors, recognizing the need to serve its natural constituency," he said.

Dr. Langfitt stressed the importance of the ties between the veterinary and medical school programs and the establishment of specialities in veterinary medicine as a first at New Bolton Center.

University President Meyerson introduced Dixon as guest of honor.

"This gift was made because of my uncle's great interest in thoroughbred horse racing," he said.

"During his lifetime, many of his horses received care and treatment here and he was very active in promoting research pertaining to large animals."

Widener, of Philadelphia, raised thoroughbreds at his farms near that city and in Lexington, Ky.

Containing more than 50 buildings and a staff of 250, the New Bolton Center last year provided care for 3,600 horses and more than 500 farm animals. Also, more than 5,000 calls were made to area farms by the Center's mobile care service.—DA

New addition to the Widener Hospital for Large Animals at New Bolton Center includes a teaching laboratory and lecture hall.

Trends for decade: fewer cows, more milk and cheese

SOUTHAMPTON — During the 1970's, total yearly milk production fluctuated from year to year, reaching a high of 120.0 billion pounds in 1972 and dropping to a low of 115.3 billion pounds in 1975 before beginning a steady increase to 1979's figure of 123.5 billion pounds, announced James Honan, of Inter-State Milk Producers Co-op. 1979's production was 6.4 percent, or 7,437 million pounds, greater than 1969's total of 116.1 billion pounds.

The number of milk cows in the U.S. dropped every year during the past decade, and in 1979 was down 12.5 percent or 1.5 million from the 12.3 million cows in 1969. Milk production per cow increased dramatically over the past ten years, up a whopping 21.6 percent or an average of 2,040 pounds for each cow in the nation.

There also was considerable change in the production of many manufactured dairy foods during the '70s. Most striking is the 86.5 percent increase in total cheese output from 1.999 billion pounds in 1969 to 3.71 billion pounds in 1979. Butter production was down 11.9 percent during the decade, and there was a 37.5 percent drop in the production of nonfat dry milk for human food

Inter-State markets in excess of two billion pounds of milk a year from 3,000 dairy farmer members in Pennsylvania, New Jersey, Delaware, Maryland, Virginia and West Virginia.

Electronic horseshoe

scientific guidelines for incorporating into training programs.

The studies have shown that changes being monitored in the equine exercise program are very similar to the development of a human athlete during a conditioning program.

In fact, the findings from the New Bolton studies are scheduled to be presented at an upcoming sports medical meeting.

HOW UNIPEL® 21-7-14 fertilizer fits so many corn fields

It provides the higher, more precise Potassium replacement many fields need to restore a fertility balance for top crop production

This replacement is often needed in fields where there is high-yield precision cropping of continuous corn, those in corn-soybean rotations or corn silage — any crop or field condition that develops or results in Potash-responsive soils

A UNIPEL Single Application of UNIPEL 21-7-14 can provide N, P and K in a ratio more nearly suited to the new nutrient needs of those fields for continued high-yielding corn

Spring or Fall, UNIPEL 21-7-14 will do it all in one quick trip over the field give your fields basic fertility for a growing season

Let's get together on a profitable program of UNIPEL 21-7-14 for your corn crop program

Berks farmers

(Continued from Page A1)

since they filed their application and never received any funds. Kooker said the paperwork for these applicants was reviewed for eligility by the farm-member board almost as soon as it was filled out, but then it seemed to be "lost" in the redtape shuffle.

One of the representative farm couples said they experienced the losing of applications personally.

They explained to Fisher that they had stopped into the Leesport office to review their loan application and finally wound up having to help search for their missing file. It was located at the bottom of a stack of files where it should never have been in the first place, they recalled.

The young farm woman related how they only applied for this year's operating money in January.

"We held off from applying in December because we didn't want our application to get messed up in the Christmas rush."

She added the FmHA director told them they would have their money by the end of February and they should go ahead and buy their fertilizer while it was still cheap. He also told them to order two pieces of used equipment they needed, she said.

"The mixer-grinder was delivered with the terms that the company would have their money by March 10 at the latest," the young woman recalled, "and we still haven't gotten the money." She said when she checked with the office about the status of their application at the end of February, it still hadn't been sent to the regional office for funding approval.

"From the time we applied, until now, the interest on our loan has jumped. When we applied it was at 10½ percent. Now I'm not sure how high it is—maybe it's up to 14 percent.

Fisher also heard the story of the established farmer who was waiting for an FmHA loan for funds to help him break into the export market for eggs.

Although this farmer normally dealt with the American Bank, the commercial bank sent him to the government agency because of their lower interest rates. That was about six months ago.

In a frustrating ordeal, the farmer's story tells how the head of the Leesport FmHA office tore up his original application after the loan had been approved at about 11 percent. The office manager's reasons behind his actions were said to have been because the way he had completed the application the first time was not the right way, and that he could do it better.

The "better" application, on the second time around, was not approved, and in the mean time, the farmer had gone ahead and purchased the needed equipment. Now the farmer's creditors are threatening to sue.

In response to these accounts, Fisher emphasized that he and Yatron were unaware of how extensive the problems had become.

"We knew of problems which popped up from time to time," he explained, "but thought they were just a few isolated cases." Fisher then promised to bring these problems to Yatron's attention and told the farmers present that they would be receiving an answer before too long.

Grange hits alcohol loans

WASHINGTON, D.C. — Edward Andersen, Master of the National Grange, asked Secretary of Agriculture Bob Bergland to undertake an indepth and objective review of the Farmers Home Administration.

Andersen said he feels this review is necessary in order to restore the farmer as the focal point in FmHA programs. His concern is prompted by the current shortage of farm credit and the overall economic problems being faced by U.S. farmers.

He said FmHA administers so many programs that it lacks the capability to rapidly respond to farmers needs. He said farm owner and operating loans and conservation funds which should be allocated to farmers with immediate financial difficulties are being diverted to the production of alcohol and methane.

"We don't question the importance of energy production on the farm," said Andersen, "but we do object to the diversion of farm program funds which are already in short supply."

He recommended the funds of alcohol production be gotten from other farm credit sources.

Volunteer firemen learn farm accident rescue tactics

BY JOYCE BUPP
Staff Correspondent

LOGANVILLE — Volunteer firemen, upon whose knowledge and quick action rural lives often depend, spent two evenings this week learning some basics of farm accident rescue.

Seventy volunteers representing fire companies throughout York County met Tuesday evening for a workshop on farm equipment accidents. The hands-on seminar was the second of a year-long series being held for the first time in the county. Joint sponsors are the agriculture extension service and the Grange, who cooperated with the machinery session hosts, Neuhauses, Inc.

Straw-stuffed dummies, constructed by Grange members, were wrapped, jammed and tangled in typical injury situations involving six separate pieces of high-powered farm machinery. Rescue volunteer students were divided into groups, spending 20 minutes at each simulated injury. Included in the dangerous equipment line-up was a self-propelled combine, pull-type corn-picker, hay baler, pull-type forage harvester, self-unloading chuck-wagon and a post hole digger.

Farm accident rescue class members examine PTO hookup, which frequently is the site of mechanized mishaps in agricultural operations.

Fire company personnel arrived in a variety of rescue vehicles and prepared for the practice session with a backup of life-saving equipment. As the "rescues" moved into full swing, volunteers used equipment like backboards, giant wrenches for leverage and Stokes baskets for lowering or raising accident victims by rope.

Dennis Murphy, Penn State extension safety specialist, and Joel Grottenthaler, Pennsylvania Emergency Health Services Council, comprised the professional safety team for the seminar. Murphy literally got into the act by entangling himself into a non-operating three-point-hitch posthold digger for each of the six rescue teams. Also assisting were Dave Weinstock, representing the York-Adams Grange, and Tim Markovits for York County extension services.

Grottenthaler operated the training session with a brief lecture on the increasing loss of lives due to farm equipment accidents. He attributes that dangerous trend to the massive size of modern machinery, as well as the problem of farmers working alone in many situations. Other hazardous conditions include toxic atmospheres from silo and manure pit gasses, potentially lethal farm chemicals, combustible vegetable materials and oxygen displacement.

No rescue attempt should be made, Grottenthaler emphasized, until power sources of any type of equipment are shut off. Engine batteries should be disconnected and grounding removed. Storage facilities equipment, such as feeders and augers in bins, cannot safely be handled until electrical power sources are cut off. Rescuers need to be aware also of the possibilty of automatic-restart timing on some equipment, which could kick into action in the midst of a victim extrication.

While two trucks are a must when dealing with large farm machinery, tow ropes, says Grottenthaler, are a "no, no," because they may stretch and snap, causing further injury.

Cutting through machinery should only be

(Turn to Page A26)

Following removal from combine's grain tank auger, the dummy victim is strapped into Stokes basket and removed from machinery.

Capitol Hill quiet, ag legislation stirring

BY SHEILA MILLER

HARRISBURG — Legislative action on agricultural topics were at a stand-still this past week on Capitol Hill.

No action was taken by the House on SB 1287 the Milk Security Fund legislation passed last week by the Senate.

But, don't let this week's easy pace lull you into thinking law's affecting farming aren't in the works.

According to Dave Weinstock of the Pennsylvania State Grange, Reno Thomas intends to hold a meeting of the Senate Agriculture Committee next week to consider any amendments to the Milk Security Fund bill.

Weinstock added the committee will be looking at the Noxious Weed Bill, the Right-to-Farm Bill (HB 1794), and the Capital Stock Tax amendments (HB 1608). HB 1253, which deals with fencing livestock from streams required will also be given a going over, said Weinstock.

The legislative calendar shows HB 1793 waiting in the wings for action. According to Neil Buss, of the Senate Ag Committee office, if the bill is listed on the calendar, it will be acted on within 15 legislative days.

HB 1793 is a bill creating agricultural areas, he added, basically the same as agricultural districts.

Weinstock pointed out there are some rumors of opposition to the Right-to-Farm legislation coming from the organization of township supervisors. However, he said, if the issue was "cast across the waters" at a formal meeting of theirs, it seems to doubtful whether there'd be any opposition.

What the Right-to-Farm legislation says is any practice that is a part of the normal farm operation and has been conducted at least one year before the citation, cannot come under nuisance ordinaces, said Weinstock. "A farmer can't be restricted for normal operations and agricultural areas are protected from nuisance suits."

HB 1608, said Weinstock, is a good place of legislation that the Grange is actively supporting. This bill, introduced by Lancaster's Noah Wenger, will exempt farm families from paying the annual one percent tax on the assets of a corporation.

"It's getting rid of a disinsentive to incorporate farms," Weinstock said, "Before this bill, if a farmer decided to incorporate, the one percent tax had to be paid each year, regardless of income."

Weinstock pointed out that similar legislation was introduced in the Senate last session by Pat Stapleton as its prime sponsor, and it didn't move.

This session, the legislation was introduced in the House and passed. It now lies in the Senate, where Stapleton chairs the ag committee.

The purpose of the Capital Stock Tax amendments, said Weinstock, is to ease inheritance burdens on farm families. "If a farmer incorporates, shares inthe corporation can be passed to the children while the parents are still living. That way, the children won't be hit so hard with inheritance taxes."

Another advantage of incorporation, said the Grange spokesman, is that it provides the farm with corporate liability.

"For example, if a child wanders onto your farm and starts playing around on a tractor that's in for repairs and the tractor accidentally falls on the child and crushes his hips, the child's parents could sue each individual of the family. But if it was an incorporated farm, they could only sue the corporation. In a partnership, they could sue both partners."

"Incorporating is a way to insure that if you lose your shirt in a suit, you'll be left with a tee shirt."

Weinstock added he feels the administration is not opposed to the bill. "The Department of Revenue estimated the money lost to them through this legislation wasn't significantly large—about $100,000 based on the amount of farms that have incorporated in the past."

Summing up the advantages of incorporation and the boost the exemption legislation would have on giving farmers the needed incentive, Weinstock said the average farm in Pennsylvania is about 148 acres in size, with an average price tag of $1092 an acre. In terms of farm real estate values, that comes to $262,000. A one percent tax charge on the assests would amount to $2620 each year, a sizable amount considering the average net farm income in 1978 was only $9000.

The savings speaks for itself at a time when every penny counts.

Learn how to handle farm emergencies

HALIFAX — Farm related accidents are becoming increasingly frequent. Newer equipment is larger and trends in operations find farmers working alone in isolated areas.

With these facts in mind, the Dauphin County Emergency Medical Services Council and the Dauphin County Farmers' Association, in cooperation with the Pennsylvania Emergency Health Services Council and the Halifax Area Ambulance and Rescue Association will co-sponsor a Farm Emergency Seminar on Saturday, May 31, at the Halifax Area High School, Halifax.

Michael Wertz, medical coordinator for the Dauphin County Emergency Health Services, points out the definite need for edcucation of both the farming community and the emergency services personnel to know and understand each other's equipment.

Registration for the free seminar will begin at 9:30 a.m. A field session has been planned at Sweigard Brothers Farm Equipment, where rescue demonstrations, general rescue tools and equipment, and inspection of farm machinery will be held.

Is time killing ag fair?

(Continued from Page A1)

noted that he felt the range would be $10-12,000 minimum. Adequate facilities and lighting would be necessary as well as a track that could meet specifications. Houck said scheduling at this point does not seem to be a problem.

Dorothy Brubaker, Lancaster, whose family is active in sheep showing, stated that while she had not heard of the proposed fair, a statewide show during decent weather which did not conflict with existing shows would be welcome by exhibitors. She noted that showing the animals would be easier when they are already fitted up and in condition, rather than the cold weather precautions necessary during Farm Show. She also said that bathing the animals would be much easier than in the Winter. Dorothy said the stress of housing animals in heated barns in the winter was a factor against the Farm Show. She also noted that to attract competitors the premiums would have to be available. She noted that many exhibitors at Farm Show did not feel that even good wins provided enough money to break even when showing.

However, having facilities large enough so that all can compete and having it in the fall with sufficient premiums to make showing worthwhile, would be welcomed by competitiors, she said. She did note that if the fair would conflict with any of the local fairs, it would require some choices on the part of more advanced exhibitors and might result in less quality in the animals exhibited locally.

Frederick C. Trump, Bloomsburg Fair Show Chairman, stated that the Bloomsburg Fair has been in operation for 125 years and even if a schedulding conflict did occcur, Trump felt that it would not take any exhibitors away from his Fair. Trump noted that in the time remaining between now and the proposed months, even the state would have a rough time making a decent first year effort. A sizeable fair he noted begins working on next year immediately after the present one, allowing a full year to plan. Minimum concentration time on any decent effort he estimated from his experience would be six months. He noted that until premium lists are printed, mailed, received and classes set up a good many months are involved. And these things would all take place after the decision to hold the fair was made and financing was all set. For the state to pick any of the late September or early October dates which conflict with existing fairs would be like butting up against a brick wall, stated Trump. Trump previously had not known of the state's proposal.

John Schwartz, Adams County extension agent, stated that his first reaction was a reservation about the manpower. Schwartz stated that the extension staff around the state is relied upon for many manhours of time during both the Keystone Livestock Expo and the Farm Show. And to add any more demands to extension personnel who are already coping with staff cutbacks would be difficult if not impossible. Schwartz also stated that he felt the purpose stated by the state to stimulate marketing might be best served by working with an already existing fair organization, Many exhibitors he said are cutting back on the number of shows due to fuel. He also noted that he felt the Kimberton Fair already served somewhat the same purpose, in the same area.

Tom Lyons from the PA Potato Growers said that commodity groups would be hard pressed to find the time or personnel for yet another yearly display. In addition, he said that marketing groups have only so many manhours and dollars to spend on fairs and shows, and they would tend to put those resources where they would be most advantageous, therefore the groups would need to feel that the effort was going to be successful. While these were his first reactions since he had not previously heard of the fair, he said it would be difficult for commodity groups to make a showing this fall.

Elmer Lapp from the PA Horse and Mule Association said that the time of year would be perfect for pulling horses or halter and hitch classes because the animals would be in the peak of condition before winter. He also felt that the timing of Farm Show in the dead of winter required super efforts to fit the animals and present them in good condition. He echoed the others, however, when he stated that the amount of premiums the state can offer will be the single largest determining factor in getting showmen to participate. And he also stated that premiums offered at Farm Show were a problem for his group this year.

John Schwartz raised the question of the image presented by tractor pulling. He stated that while the pulls would draw crowds, urbanites would see big expensive tractors and think that farmers were not fuel conscious and spent huge sums on their equipment thus driving the prices up. He also noted that the casual city observer would need help understanding the livestock shows, since showing is more a producer oriented activity encouraging better animals rather than a consumer oriented activity.

"All we need is another state show," he said. "Where is the manpower going to come from?

Hallowell said that several Bureaus in the state are working on the proposal for a show, and it was still too soon to talk specifies. And Sumner said that meeting during the next several weeks will determine the date and fate of the fair. But all interview agree on one thing. Time is getting short.

York County farmer John Marsteller, wearing cap, explains operating mechanism of a cornpicker to volunteer firemen.

Farm rescue

(Continued from Page A24)

done as a last resort, but entangled clothing must be cut off. Moving parts are generally easier to open up away from the power source, where they are fastened to drive gears or PTO hookups.

One rule Grottenthaler particularly stressed was avoiding turning the equipment back on or reversing it "hoping that it will spit the patient back out." He also warned that a farm accident often rapidly escalates into "mass hysteria" since farms are family-oriented and family members and close neighbors are likely to be at the scene. Rescuers should be prepared to handle the trauma of those family members, and use fire police to keep all spectators away to lessen confusion in rescue efforts.

A Wednesday evening classroom slide-and-lecture session was held at the Red Lion Grange Hall as the follow-up to the machinery workshop. Briefings covered machinery overturns, manure systems and storage, grain bins, silos and anhydrous ammonia spills.

Assisting in operating the equipment during the machinery workshop were farmers Charles Hess, Dallastown R1; Dennis Mummert, Seven Valleys R2; John Marsteller, Stewartstown R3; and Neuhauses, Inc., personnel Geroge Smeltzer, Tom Whitcraft, and Marlette Thomas.

Sheep virus disease confirmed

WASHINGTON — Scrapie, a virus disease of sheep and goats that affects the central nervous system, has been laboratory-confirmed in flocks in seven states since Oct. 1, 1979, according to animal health regulatory officials of the U.S. Department of Agriculture.

Jack Pitcher, a veterinarian with USDA's Animal and Plant Health Inspection Service, said the seven outbreaks reported since last October compared with only four outbreaks during the previous 12 months.

The seven outbreaks and dates found in the various states are: Iowa, Oct. 16; Oklahoma, Nov. 19; Michigan, Jan. 11; New York, Jan. 28; New Jersey, Feb. 29; Pennsylvania, April 16; and Illinois, April 21.

The case in Pennsylvania involves a small hobby-type flock in Delaware County, according to Dr. John W. Cable, of the Bureau of Animal Industry.

The flock has been isolated and quarantined, awaiting completion of appraisal procedures for indemnity when the flock is destroyed.

"Scrapie has a long incubation period—18 to 42 months or longer—before signs of the disease appear," Pitcher said. "Early symptoms are hard to detect, but they generally begin as a change in temperament or disposition of the affected animal. Later signs are an unsteady gait, loss of weight, intense itching and wool loss from rubbing and scraping on fixed objects."

Pitcher said the disease was first diagnosed and confirmed in the United States in 1947. A scrapie eradication program was initiated by state and federal animal health officials in 1952.

Because there is no known treatment for scrapie, an incurable disease, all infected and exposed sheep are humanely destroyed to prevent further spread. The disease can be spread and traced genetically through blood lines. It can also be spread from animal to animal through contact within the flock, Pitcher said.

Choose tent with comfort in mind

WEST CHESTER — If you like the thought of sleeping out under the stars but summer rains and biting insects deter you-consider a tent designed with comfort in mind. Here are some shopping suggestions.

Look for a tent which is water repellent and breathable. The material should shed water on the outside but allow moisture and air to escape from the inside.

Seams should be double-stitched with mildew-resistant thread. And areas of stress should be reinforced.

Check to see that zippers and seams are well sewn and windows are netted with nylon to prevent insects from sneaking in.

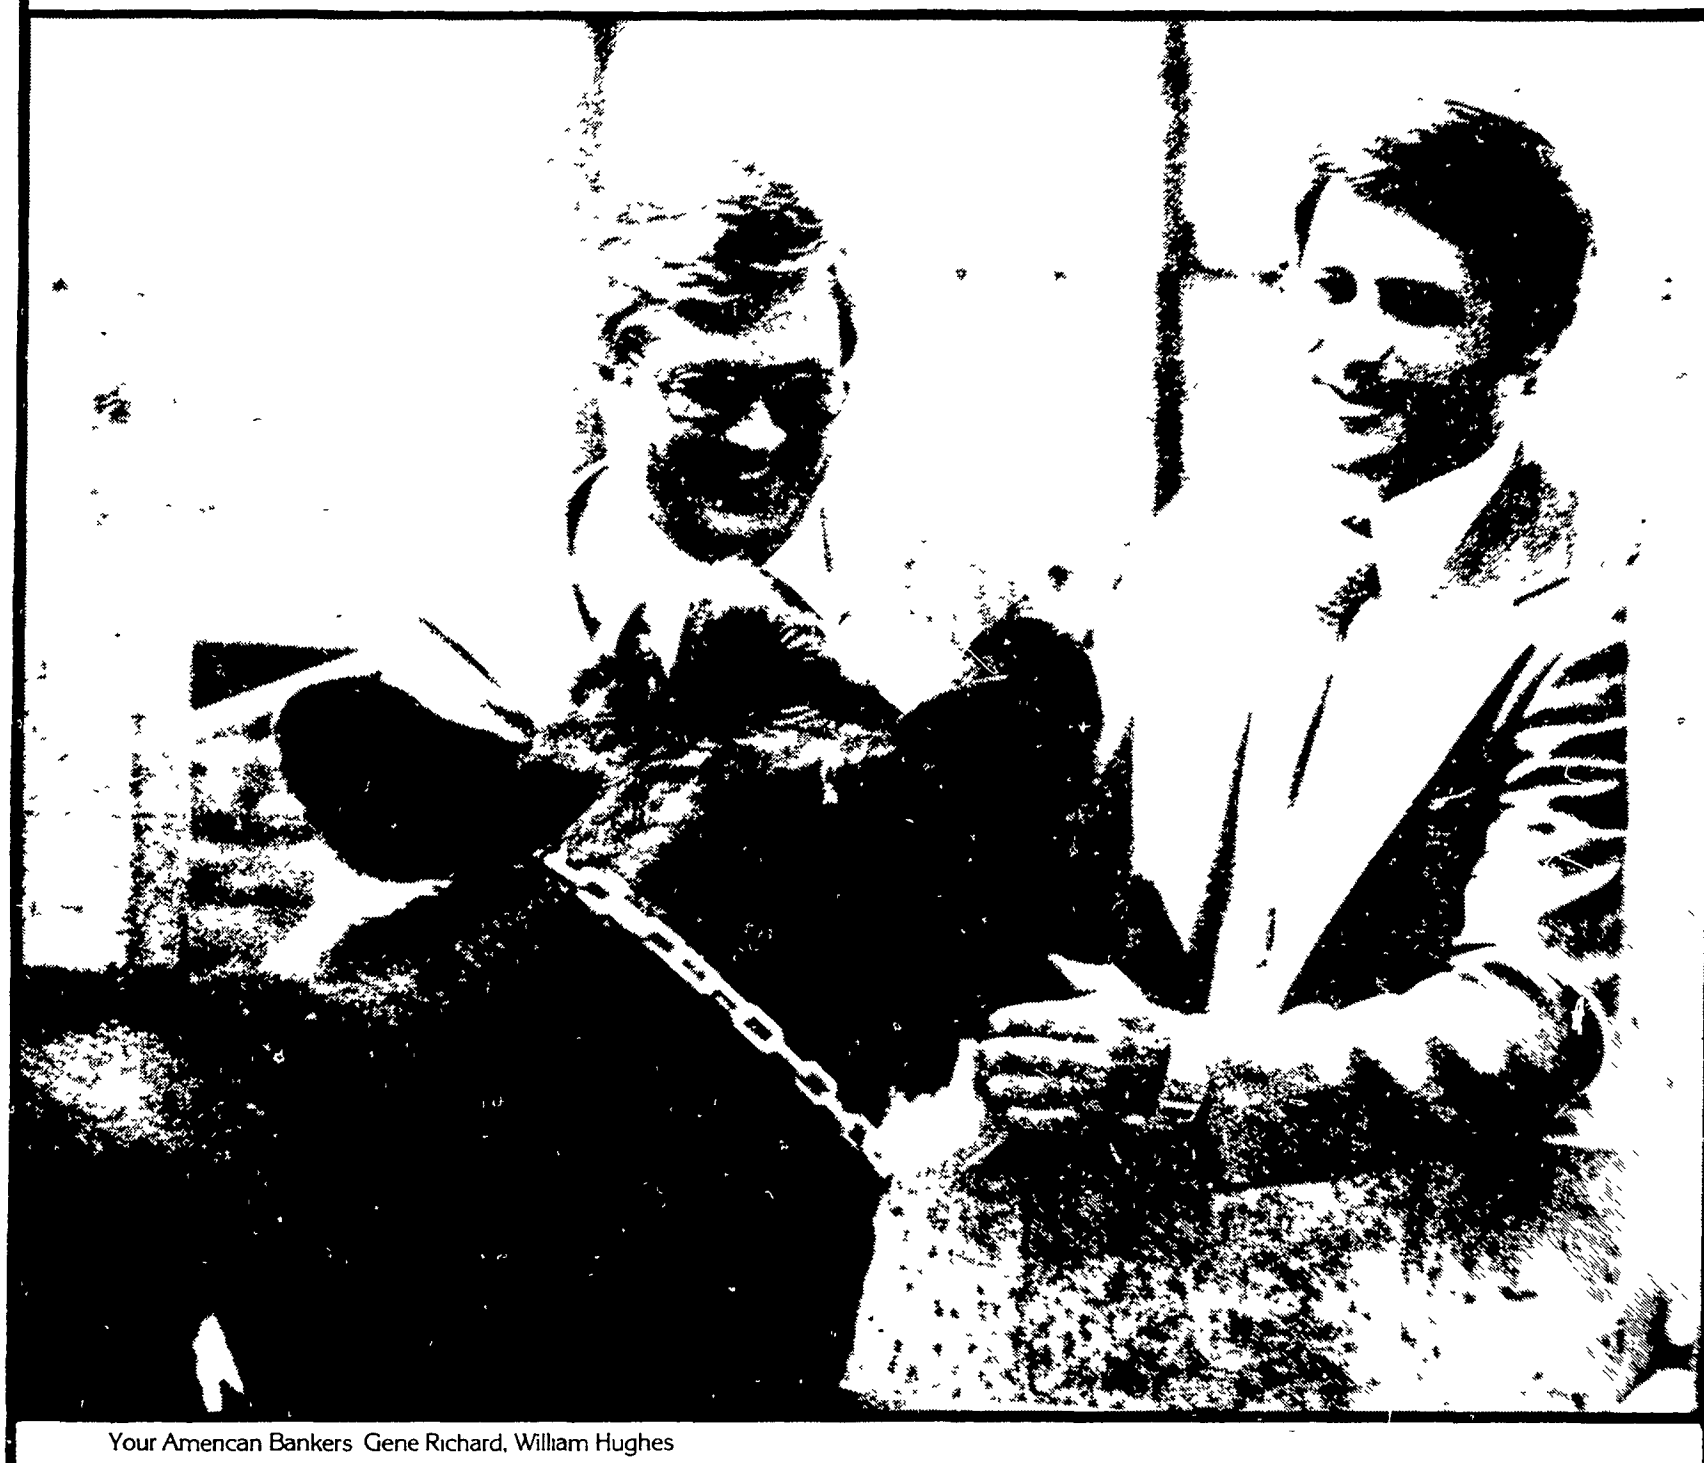
A tent with a netted entry and cover flap is particularly desirable since the flap may serve as an awning during the sunny part of the day.

When choosing a tent size, allow plenty of living space for each camper-at least 20 square feet of floor space for each person.

Color, too, is important. A light tent will reflect heat while a dark one will absorb the sun's rays. Your choice may depend on where you plan to camp.

A quality tent will last an average of 10 years if given proper care. Be sure the tent is clean and dry before storing. Dust particles may weaken the fibers. And roll a tent, rather than folding it.

Meet your American Banker.



Your American Bankers Gene Richard, William Hughes

He puts a lot of stock in your farm.

A major challenge to the success of raising livestock is proper money management. That's a challenge your American Banker is proud to accept. Because the people in our Agri-Business Department have farming backgrounds, they understand the everyday financial needs of farmers. So when they come out to see you, they speak your language.

Since the turn of the century, American Bank has had a special kinship with farmers and their land. Over the years we've kept pace with their needs with loans for livestock, new equipment, construction and remodeling. As times and needs changed, we helped with lines of credit and operating capital. Today, we're still maintaining that pace with additional financial services like trusts, retirement and estate planning, and savings and checking accounts.

American Bankers come from farming stock. So it comes as no surprise that we have a lot of pride in the farmers we work for. If you'd like to see us, call our Agri-Business Department at (215) 375-5993. We'll put a lot of stock in your ideas.

Bradford Homemaker's Day — mark it super

BY JANE BRESEE
Staff Correspondent

DURELL — Harold Neigh, Extension Consumer Marketing Specialist at Penn State, outlined the evolution of the supermarket and predicted its future at the Bradford County 1980 Homemaker's Day held recently at the Towanda Gun Club in Durell.

The supermarket era dates back to the 1930's, Neigh informed the 130 ladies present. A man called Cullen created the concept, and being unable to sell the idea to anyone else, opened his own store in Jamaica, Long Island, which later became a chain called the King Cullen Super Markets. The super market cart was invented as early as the mid-30s in Oklahoma.

The supermarket evolution peaked in the mid-60's, Neigh said. It is a slow evolution now entering old age waiting for new food products and a new marketing concept.

The only major technical breakthrough was electronic scanning which has run into a problem because people won't accept it. It is being used more and more regardless of the expense of the cash registers, and the state law which mandates item pricing. Neigh opinioned that we are coming to it along with other electronic devices which will make us a cashless society.

Talking at length about labelling, food additives, and substitute foods, Neigh concluded with the worry that if children are brought up to like the taste of imitation foods, they may not know what the taste of real food is.

Neigh was introduced by Yvonne Crimbering, chairman of the Home Economics Advisory Council. She encouraged the women to look at the displays of needlepoint pictures made by a class taught by the home economist; and samples of made-over clothing, products of another extension program.

Following a buffet luncheon, Linda Hulslander, home economist of Bradford County, introduced Ed Dieffenbach, assistant director of the home extension service. He spoke briefly about the nutrition aide program, introducing the new Nutrition Home Economist, Cathy Bakalar, and the new aides, Pauline Burgess, Kay Butcher, and Laura Sylvester.

Mr. Dieffenbach also commended the Home Economics Advisory Board for being influential in getting 1 million dollars in the state mandated to hire people for key Extension Service positions.

The afternoon program was a silk flower demonstration by Myrna Kreischer, co-owner of the Tree Stump and Craft Corner in Towanda. She created several different types of arrangements from silk flowers.

The twenty member Home Econmics Advisory Council cooperating with the county home economists presents two programs a year with the purpose of providing pertinent homemaking education for all county women.

Harold Neigh, Extension Consumer Marketing Specialist from Penn State, is shown with Cathy Bakalar, northeastern district nutrition home economist. Neigh was key-note speaker for the Bradford County Spring Homemaker's Day.

Myrna Kreishcher, Towanda, demonstrates silk flower art to the 130 women at the spring luncheon.

Stockholders

(Continued from Page A1)

million worth of stock?" Coleman asked.

He noted that stockholders paid full value for each share.

Coleman said the committee will protect the best interest of the preferred stockholder.

He maintains there is no conflict between the interests of the preferred shareholders and those of common shareholders.

Dairy officials have said that only eight percent of the preferred shareholders are current shippers and have described the remaining 92% as outside interests. All current shippers hold common stock.

At the annual meeting Robert Barry, president of the dairy, said the dairy would have to hold back about $10 million from shipper proceeds in order to raise capital to restore the book value of the stock.

He said shippers are now complaining that monies withheld from them are used not to build up their own equity, but to build up the equity of the preferred stockholder.

Lehigh management argued that a reorganization was the only way to avoid financial collapse.

The protective committe is further questioning the valuation of the assets of the dairy, listed at $19 million.

"The $19 million represents the depreciated book value of the properties, plants, and equipment," a committee press release stated. "Some of the buildings and land included in the sale in areas of Allentown and elsewhere have substantially appreciated in value. Despite this, directors are selling these assets at a 50% discount."

In the proxy statement issued to stockholders prior to the annual meeting, dairy officials cite the Business Corporation Law of Pennsylvania in saying "there are no appraisal rights for dissenting common stockholders or for holders of preferred stock."

"All stockholders have rights," Coleman asserted.

The committee is trying to locate more preferred stockholders and is asking that they contribute $1 per share held to pay costs incurred by the organization. They are further suggesting that shareholdes not respond to the dairy's request to sign and return stock certificates.

Snyder is optimistic about the support the group can generate.

"People who started this dairy counted on this money for their retirement," he said. "I don't see how a jury can turn us down."

He also said several people have expressed interest to him in buying the dairy for "a lot more" than the present valuation.

Robert G. Tallman, counsel for the dairy, said:

"We consider the transaction a proper one. There is no legal basis on any effort to stop the transaction."

He said the signed stock certificates do not become signficant until the time of a distribution of the assets. Stockholders had been told that a distribution would not take place until all pending litigation had been settled, which could be several years.

Tallman also said that should the board receive a bonafide offer for the purchase of the dairy, the matter would be presented to shippers for their consideration.

Glenn Ellenberger is shown above in his earlier days as an agent.

Glenn Ellenberger to be honored at picnic

ALLENTOWN — A family picnic in honor of retiring extension agent, Glenn Ellenberger, has been planned for Sunday, June 1 at the Agriculture Hall of the Allentown fairgrounds starting at 12:30 p.m..

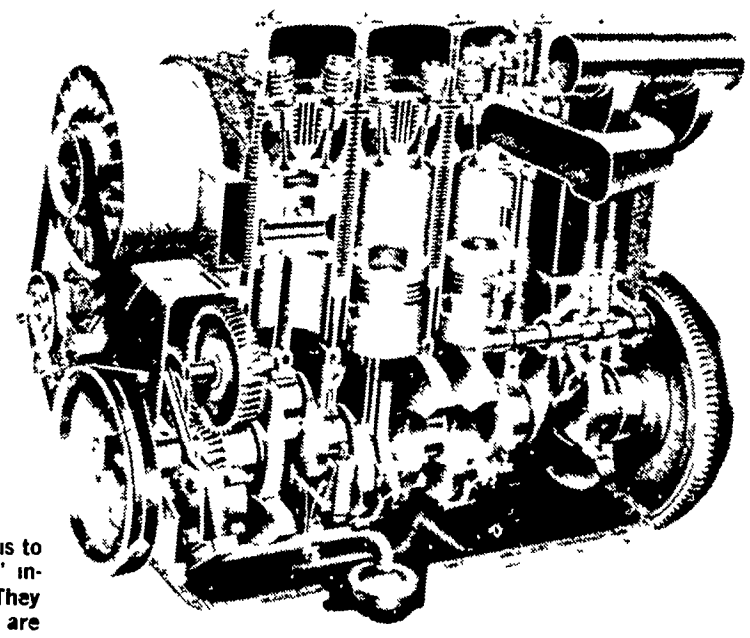
Ellenberger has served as Lehigh County Farm Agent since 1951. He will be retiring in July after 29 years serving the Lehigh area. The afternoon event has been planned as a meal to be served from 12:30 p.m.-2:30 p.m. At 3 p.m. the formal part of the program will begin. The main speaker will be former PA Secretary of Agriculture, Lee Bull.

Interested people are encouraged to send a letter of best wishes and/or congratulations to Glenn to be inserted in a special book which will be presented to him at the picnic. Please use one side of one sheet of paper no larger than 8½x11 inches.

Reservations should be made by May 23. Send $10 for adults and $5 for children 5-12 to: Glenn Ellenberger Picnic, Lehigh County Extension Service, Room 604, Courthouse, Allentown, PA 18101.

All air-cooled engines are NOT created equal

ASK ABOUT STAUFFER'S 5-YEAR ENGINE HEAD AND BLOCK WARRANTY



It's easier to call an engine "heavy duty" than it is to build it that way Many carburated "heavy duty" industrial engines simply don't deserve the title. They consume expensive fuel at an alarming rate: they are prone to break down or overheat and their life expectancy is measured in hundreds of hours If any engine in the world qualifies as heavy duty, it's Deutz Deutz engines are often chosen to power equipment with unit price tags over half a million dollars -- that's heavy duty.

When it comes to cooling efficiency, the Deutz precision-engineered axial-flow cooling air blowers have no equal. This direct approach to cooling (without collants, additives, cavitation) means our engines need only about 60% of the air volume liquid-cooled engines require Combustion efficiency is greatly improved by higher head temperatures and engine life is extended by cooler oil temperatures.

If you think air-cooled engines are prone to overheat, talk to Deutz users in the scorching heat of the Imperial or San Joaquin valleys. There, Deutz engines deliver more than 20,000 hours of trouble-free service before a major overhaul.

There are lots of things that separate Deutz engines from water-cooled and other air-cooled engines Things like blower design, big lube oil coolers, oil-cooled pistons, special alloy cylinder heads, a research and development team of more than 1,000 engineers These are all important advantages Still we say If you can find an engine that uses less fuel than a Deutz -- buy it

York dairy princess contestants to compete June 14

BY PATRICIA GREEK
Staff Correspondent

YORK — A new first lady of the county dairy industry will be chosen on June 14. Five young ladies will be vying for the honor of the York County Dairy Princess at the annual pageant to be held at the County 4-H Center, Bair.

The pageant will begin at 8 p.m. with reigning princess, Carol Druck, R2 Airville, presiding over the festivities.

Contestants are: Angela Eyster, Kathy Neufeld, Tina Neufeld, Melinda Innerst, and Jill Stanford.

Angela Eyster, 16, is the daughter of Mr. and Mrs. Donald Eyster, R4 Spring Grove.

A junior at Spring Grove Area High School, Angela plans to further her education in equestrian studies.

A two year member of the National Honor Society, Angela is a member of the school's marching band, and her church's volleyball team and youth group.

She is also a member of the Central 4-H Dairy Club and has shown her animals for several years. Angela helps to milk the 29 Holstein cows on their farm, owning one cow and calf herself.

Kathy Neufeld, is the 19 year old daughter of Mr. and Mrs. Gilbert Neufeld, Sr., R4 York. She graduated in 1978 from Hamburg High School and worked as a receptionist for one year.

Now Kathy is planning to work at home on the farm, milking 160 Holstein cows. She'll be keeping the barn clean, keeping records on the cows and doing the feeding. Her activities include playing the piano for her church choir, serving as its youth group treasurer and the church council's secretary. Kathy's hobbies include playing sports and just taking walks in the woods.

Tina Newfeld, 18, is also the daughter of Mr. and Mrs. Gilbert Neufeld, Sr., R4 York.

A senior at Hamburg High School, Tina plans to attend Shippensburg State College and major in psychology.

Her activities include being a member of the National Honor Society, girl's track and cross country teams and student council.

Tina, a 7 year member of 4-H, has held the offices of president, secretary, and treasurer in her club.

Melinda Innerst, is the 16 year old daughter of Mr. and Mrs. Jacob Innerst, R3 Red Lion.

A junior at Red Lion Area Senior High School, she has been a member of the Red Lion FFA chapter for three years.

Melinda has held the office of parliamentarian this year and will be the secretary for the FFA chapter next year. She has participated in dairy judging, dairy foods, and land judging. Enjoying softball, Melinda is a member of both the church and the girl's softball teams.

She feeds her family's veal calves and helps to milk their 105 Holstein cows morning and evening.

Jill Stanford, 18, is the daughter of Mr. and Mrs. Leland Stanford, R1 Dillsburg.

A senior at Trinity High School, Jill will be attending Mount Aloysius Junior College majoring in occupational therapy. She hopes to pursue a career in art therapy. A school cheerleader, she is also a member of the band and choir.

Jill has carried several 4-H projects including sewing, cooking and baby beef. She is a member of the church choir and youth group.

The family's herd consists of 36 Holstein cows which Jill helps to milk every other night. She also helps in the fields, baling hay, plowing or whatever needs to be done.

June Boyer, Thomasville, is the county coordinator of the Dairy Princess Program. Admission to the pageant is free.

Soybean loan rate increase awaits House vote

ST. LOUIS, Mo. — American Soybean Association President Allan Aves commended the House Agriculture Committee for its prompt action in approving a bill to increase soybean loan levels to the ASA-recommended $5.02 level.

ASA, citing increased production costs and the difficulty farmers are having in obtaining production loans, recommended the increase April 2. The current soybean loan level is $4.50 per bushel.

Recognizing the efforts of Congressman Dawson Mathis (D-GA) in moving the bill through the committee, Aves said he appreciated the concern the House Agricultural Committee had shown for current difficulties in the farm community.

Aves urged Congress to act on the legislation as soon as possible after May 15 which was the earliest the bill could come before the House for a vote.

"The increase from the current $4.50 loan rate to the new $5.02 rate will provide farmers with a much needed additional source of capital to meet increasing production costs," said Aves. "It also provides some price protection.

"In keeping with long standing ASA loan level policy, we have purposely advocated a level that is only 65 percent of the national average production cost. We continue to believe that any higher loan level would likely encourage excess domestic production and increased foreign competition which in turn, would lower soybean prices."

Deutsch visitors come to Deitsch land

BY SALLY BAIR
Staff Correspondent

LANCASTER — Lancaster countians opened their homes to 254 West German visitors this weekend and managed to build friendships which should last a lifetime.

The West Germans, almost all from West Berlin, arrived last Friday night and will depart this afternoon from the Middletown airport.

The exchange program, arranged by Friendship Force, includes a visit by 254 Lancastrians to the German city. The Americans are likewise staying in homes while they learn to know the people of West Berlin.

The Friendship Force exchange has been bringing together people from different countries since it was founded in 1977 by President Carter.

The visiting West Germans' stay in southcentral Pennsylvania was short, but filled with visits throughout the county and to such places as Hershey, New York City, Niagra Falls and Washington, D.C. Several of the German guests were able to arrange visits with families they had met on previous Friendship Force exchanges with other states.

A visit to this area is not complete without seeing a farm, and some of the West Berliners found themselves staying with local farm families. Although the large metropolitan area of Berlin does include some farms, there were no farmers or agricultural-businessmen along on the trip.

The Josie Buckwalter family, R3 Lititz, hosted Meike and Rainer Draugelattes. They said this city couple was very happy to be on a farm.

"They like living on the farm, and say that farms here are bigger than in Germany." Nancy said.

While sight-seeing has kept them busy, they have observed the feeding operation on this beef farm. Nancy added, "Rainer said 'everything is so clean.' He remarked that the homes are clean and the farms are well kept."

While Meike and Rainer have traveled in the United States before, and although they are from the city, they do not like New York City. Nancy said that Rainer explained "it was too busy", and one must watch one's wallet carefully.

One of the reasons the stay is so compatable, Nancy says, is that the Draugelattes are honest and not shy. "It makes you feel comfortable. They also don't want to inconvenience you in any way and, they thank you for everything you do. They are so dear."

A side benefit for the hosts is the opportunity to see their county as they are showing it to the Germans. Nancy said, "I'm enjoying myself."

For Moses Beiler, R2 Willow Street, the German visitors from Berlin have given him the opportunity to renew his knowledge of Berlin which he and his wife visited several years ago on a bicycle tour of Europe. "We have some limited knowledge of Berlin and we have enjoyed talking abut that," he said. The Germans and the Beilers are communicating in German, English and some Pennsylvania Dutch, so they have had little trouble understanding each other.

"I think this is a good thing, and the planning for it has been very good. Our visitors have been very impressed with Lancaster. They say the people here are superb, but the roads are terrible. Their first desire is to see New York since they have seen it on television."

For the Beilers' guests, the experience of living on a dairy farm is new. Beiler said, "They are very helpful, but they say they never want to farm because it is too much work. They do love being in the country."

He added at first they were afraid of the big dairy animals, but now Hans-Georg helps get them in to feed them. So far he has not tackled the milking. Beiler concluded, "We're having a good time."

J. Mowery Frey, 401 Beaver Valley Pike, Lancaster, said, "I've enjoyed our visitors very much. They are polite, kind and appreciative. We found their reaction to the Amish very interesting, as well as their reaction to all the farms here."

Frey said the first time his visitors saw an Amish buggy they thought driving the horse was just someone's hobby. He took them to visit Amish neighbors and they got a first-hand look at that culture.

For the Tom Williams family in Middletown, Dauphin County, this week

(Turn to Page A37)

Three West Berliners make friends with a calf at the farm of Marvin and Timothy Brown, Littlestown R1. The three visitors are living in Lancaster County for a week with the N. Alan Bair family, through the Friendship Force Exchange. They are, from left: Edith Henke, Barbara Mewis, and Kristine Jackal.

Opinions asked on milk referendum

HARRISBURG — Pennsylvania Agriculture Secretary Penrose Hallowell today told the Keystone Milk Marketing Council, Inc. that the State Agriculture Department plans to initiate a process to establish a referendum for a milk marketing program under the Pennsylvania Agricultural Commodities Marketing Act of 1968.

Hallowell said he was also sending a letter to the state's farm and dairy organizations requesting their opinions toward the referendum proposal.

The Keystone Milk Marketing Council, Inc. is an organization representing leading farm organizations, milk cooperatives and independent milk producers in the state which works to help Pennsylvania maintain a valuable milk industry. The group met in Harrisburg at the Agriculture Building.

"Several Pennsylvania farm and dairy associations have already requested hearings on a milk referendum," Hallowell told the group. "I am assuming broad based support for the referendum in the dairy community. However, to be sure of such support, I have asked the state's farm and dairy organizations to comment on the referendum idea within the next 30 days."

He said that after 30 days, he would call a meeting of representatives of the dairy community, "to develop a proposal for a milk marketing referendum to best serve the interests of Pennsylvania's milk producers.

The Pennsylvania Agricultural Commodities Marketing Act of 1968 establishes procedures for developing and operating marketing programs to promote Pennsylvania agricultural products. Marketing programs can include advertising, sales promotions, research and information services. Such programs are funded by collection of an assessment from affected producers.

Under the law, the Secretary of Agriculture must call a public hearing to discuss proposals for a marketing program, establish an advisory board to assist in the administration of the program and then hold a referendum among producers of the commodity. The marketing program is approved if a majority of those voting, by number and volume, assent.

Apple, potato and red cherry producers currently have marketing programs in Pennsylvania.

Hallowell said he hoped that the 30-day period for comment and future public discussions would generate a consensus in the dairy community.

Berks-Lebanon-Schuylkill FFA small engine contest held

ELVERSON — Berks, Lebanon and Schuylkill FFA students participated in the area small gasoline engine contest recently.

Jerold Fahnestoch, Elco, won the individual competition. The contest consists of a written test on the theories of operation of small gas engines and the use of a selected reference book, also indentification of tools used in engine work and finally locating faults put into engines and correcting them so that the engine will run properly.

Other individual winners were: 2. Douglas Blauch, Northern Lebanon; 3. Mark Garber, Conrad Weiser; 4. Troy Matthew, Elco; and 5. Mark Brehm, Northern Lebanon.

Winners in the team contest were: 1. Eastern Lebanon County; 2. Conrad Weiser; 3. Northern Lebanon; 4. Twin Valley; 5. Cedar Crest; 6. Kutztown; and 7. Annville Cleona.

Eastern Lebanon and Conrad Weiser will represent the area in the PA contest during FFA activities week in June.

TV replacement program

MEDIA — If you wish your children watched less television, but aren't sure what to do with them when the TV is off, Maryetta Dorricott, Delaware County home economist, has help.

She's prepared a program called just that, "What To Do When the TV is OFF" available free to interested groups. The educational and entertaining program takes about 30 minutes to present and all the information you need can be sent to you, along with some ideas for presenting the program to your group. If you're interested in the program, call her at 215/891-2491.

Applications due for taxidermy exam

HARRISBURG — Applicants who plan to take the 1980 Pennsylvania taxidermy examination should file applications with district game protectors prior to May 23.

Applications are available from district game protectors and from the six field division offices of the Pennsylvania Game Commission.

The 44th annual taxidermy examination will be given at the Game Commission's Southcentral Field Division Office at Huntingdon on June 17, 18 and 19.

The examination, which is in two parts, requires half a day to complete.

A $25 fee must accompany the application to help cover the costs of conducting the examination.

There is an additional annual fee of $25 for those who successfully pass the examination and wish to be licensed.

Anyone who practices taxidermy for profit in Pennsylvania must have a permit issued by the Pennsylvania Game Commission. The permit is issued to persons 18 years of age or older who are residents of Pennsylvania and who pass the examination conducted annually by the Taxidermy Examining Board, which is appointed by the Game Commission.

Each applicant must present to the board at the time of the examination five specimens which have been prepared within the past three years. An affidavit that the applicant has personally prepared the specimens must also be presented to the Taxidermy Board.

Specimens to be presented must include one deer head, one small mammal, one upland game bird, one species of waterfowl, and one fish or reptile.

The written part of the taxidermy examination will be on taxidermy methods and procedures, with a few questions concerning the game, fish and federal laws, as they might relate to taxidermy.

The Taxidermy Board will use the following criteria in judging each specimen presented for examination: 1. lifelike in appearance; 2. sewing; 3. large game heads; 4. restoration of color; 5. preservation; 6. cleanliness of specimen; 8. support strength.

NACD co-hosts conference on rural conservation

WASHINGTON, D.C. — The continuing nationwide loss of more than 3 million acres of agricultural land through urbanization and to other uses each year, including one million acres of prime farmland, could foreshadow a crisis in agriculture within the next 10 to 20 years compared to the present energy crisis, some conservation sources believe.

The loss of agricultural land on the national level, coupled with destructive soil erosion with results in the equivalent loss of another 3 million acres of productive agricultural land each year, is expected to have a significant impact on the nation's long range food supply and its continued ability to export food and other agricultural products abroad.

The loss of agricultural land will also hurt the consumer where it hurts the most — in his pocketbook — due to consequent increased costs of production, it is predicted.

In an effect to develop greater public awareness to the problem, and to focus on some of the steps being taken, or needed, to reduce the impact of continuing agricultural land loss, a conference on Rural Conservation — Protecting Our Farms and Villages will take place at the Capital Hilton hotel in Washington, D.C. on June 13-14.

The conference is sponsored by the National Association of Conservation Districts and the National Trust for Historic Preservation. Speakers will include spokesmen for the U.S. Department of Agriculture, the National Agricultural Lands Study, state and local officials, specialists in rural and historic preservation, conservation and environmental organizations.

$2.40 corn loan rate, an American farmer's dream?

WASHINGTON, D.C. — The U.S. House Agriculture Committee recently approved legislation which would boost the price support loan rate for corn by 30 cents a bushel to $2.40 per bushel.

The new rate would apply to 1980 and 1981 crop year corn placed in the three year reserve. All corn producers would be eligible to participate in the reserve under terms of the bill which was approved on a 40-1 vote.

House Agriculture Committee Chairman Tom Foley (D-Wash.) authored the bill. He worked closely with Congressmen Tom Harkin (D-5th Ia.) and Berkley Bedell (D-6th Ia.). They convinced him to set the loan level at $2.40 in his bill, rather than at $2.25, the level already adopted by the Senate Agriculture Committee.

A $2.40 corn loan rate has been a key element of the farm program Harkin has urged to restore corn prices to pre-Soviet embargo levels. Last month he called off his potential "favorite son" candidacy in Iowa's district Democratic Conventions after prodding the Administration into some initial action on farm problems and after winning a promise from President Carter to actively pursue the possibility of raising corn loan rates to $2.40 by administrative action.

"That was nearly three weeks ago," Harkin said. "The White House apparently isn't in any hurry, so we decided to stop waiting on them and do it legislatively."

The bill now goes to the full House for consideration.

14 learn sheep skills

GETTYSBURG — Fourteen shepherds received certificates of accomplishment in a sheep clinic sponsored by the Extension Service, Adams County Sheep Producers Association, and Penn State's Department of Agricultural Education.

The sheep clinic, held on May 10 at Belmont Ridge Farm, was conducted as part of a statewide effort to expand sheep production in Pennsylvania. Basic technical sheep management skills were taught by John H. Schwartz, County Agent, and Dr. and Mrs. Charles Platt, local sheep producers.

Those receiving the certificate of accomplishment were Earl E. Harrison, Emmittsburg, Md.; Rick R. Showers, Biglerville; Virginia, Peggy and Peter Bastien, Fairfield; Kathy and Neal Plumb, Emmittsburg, Md., Deborah Spain, Fairfield; Ken Swick, York Springs; Jo Ann Zeman, Hanover; and Dr. Charles Platt and Barbara Platt, Gettysburg.

Saddle Cinches 4-H Club elects officers

LANCASTER — The Saddle Cinches 4-H Club held their first official meeting at the home of Deanne Kreider, Manheim.

Officers elected by the club for the coming year are: Connie Carr, president; Denise Travitz, vice-president; Alison Heisey, secretary; Sharon White, co-secretary; Angie Heisey, treasurer; Lisa Miller, newsreporter. Leader for the group is Kendy Allen, R4 Manheim.

Members discussed upcoming events such as a trip to Wonderland Farms May 24 and a 4-H gymkhana to be held at Fellenbaums, June 24.

The club's next meeting will be held at Allen's Monday, May 26.

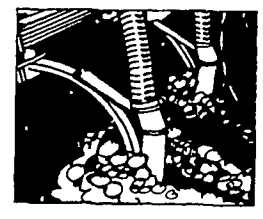
Switch fertilizer tanks to a Calumet liquid manure spreader with soil injector.

Livestock manure is valuable. So it makes sense to keep as much of that value in the ground as possible. A Calumet 2 or 4-shank soil injector does just that. Teamed with a Calumet liquid manure spreader, the injector puts manure as deep as 12 inches. This can help retain four times the nitrogen that's lost with surface application, as well as reduce odors and runoff.



See the full line of Calumet spreaders from 1625 to 4500 gallons, and Calumet 2 and 4-shank soil injectors at —

Wildlife Federation offering conservation vacations in Blue Ridge and Adirondacks

WASHINGTON, D.C. — Outdoor lovers planning summer vacations can now choose between week-long holidays in two mountain retreats — in the Blue Ridge Mountains of North Carolina or the Adirondack Mountains of New York — according to the National Wildlife Federation.

NWF, the nation's largest conservation education organization, will hold Conservation summits at conference centers in the Blue Ridge and the Adirondacks this summer. The Summits are designed for singles, couples, and entire families, with special programs for younger campers.

"Anyone of any age can learn and enjoy at a Summit," said Curt Abdouch, NWF's assistant director of membership programs. "The only requirement is a desire to explore our natural world and the earth's resources."

Summiteers pre-register for up to three workshops a day, in such subjects as nature photography, bird ecology, backpacking basics, and astronomy. Free time is spent playing tennis, fishing, swimming, horseback riding, and enjoying other recreational activities. Evening programs at the Summits feature slide shows, concerts by local talent, dancing, and campfires.

Those who choose the June 21-27 Blue Ridge Summit, which is located east of Asheville, at Black Mountain, North Carolina, will be housed in rustic inns or modern motel rooms. Meals are served family style in the Blue Ridge Center dining room, which overlooks Mount Mitchell, the highest U.S. peak east of the Mississippi.

Field trips scheduled for Blue Ridge Summiteers include visits to the Pisgah National Forest, Great Smoky Mountain Park, the stately Biltmore House in Asheville, the University of North Carolina's Botanical Gardens, local potteries, and the Blue Ridge parkway, to study birds, trees, wildflowers, fungi, insects, and reptiles indigenous to the Blue Ridge.

Other special activities at the Blue Ridge Summit include courses in Appalachian music, art, and history. Evening activities will feature demonstrations of such folk instruments as the mountain dulcimar, musical saw, and jaw harp. Harley Jolley, professor at Mars Hill college in North Carolina, will relate the folklore of the region, and craftsman Jim Gentry will demonstrate how natives shape the abundant resources of the Appalachians into furniture, tools, and fabrics.

Farther north, those who'd like to spend their vacation lakeside may consider the July 20-26 Adirondack Summit, at the Silver Bay conference center 80 miles north of Albany, New York, on the western shore of Lake George. There campers will stay in bunk rooms or private motel rooms and gather for meals at the Silver Bay Inn.

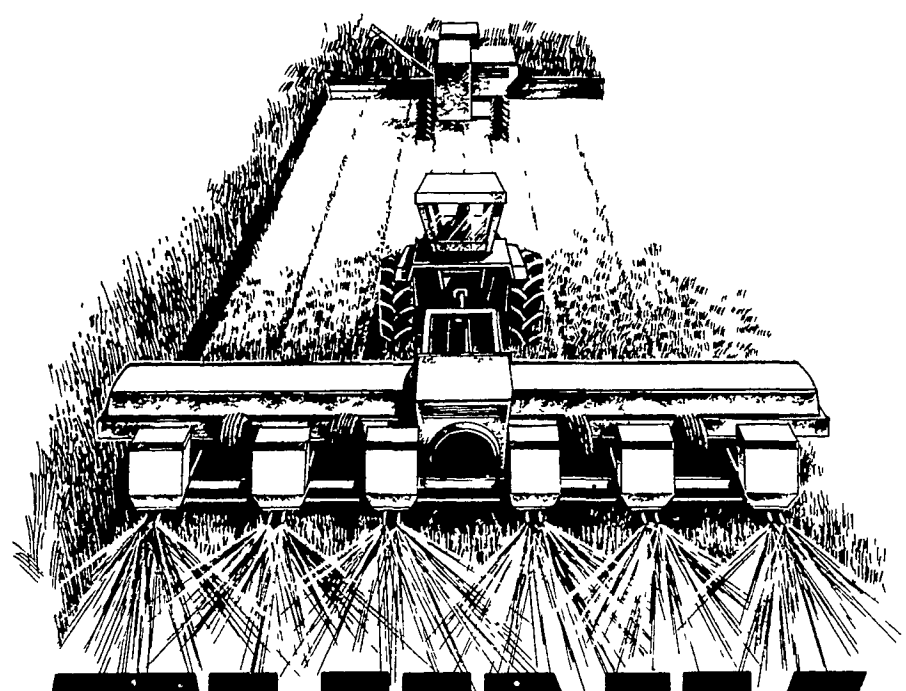
Lake George offers a number of aquatic activities, including swimming, rowboating, canoeing, and fishing. Two field trips have been scheduled for Adirondack Summiteers — a day trip to Fort Ticonderoga and Crown Point, and a half-day backpacking trip to scenic Black and Pharaoh Mountains. In addition, campers can enjoy visits to near-by Lake Champlain, Adirondack Park, and the Adirondack Museum at Blue Mountain Lake.

Professor Louis Ismay will explore with Adirondack Summiteers the history and folklore of the mountain regions. Local woodcarvers Rich and Ellen Butz will deomonstrate the art of wildlife woodcarving.

Babysitting is available at both the Adirondack and Blue Ridge Summits. Younger campers, ages five to twelve, can enjoy a variety of nature-related activities designed especially for them in the Ranger Rick Youth Program, and teenagers can develop outdoor skills on hikes and overnight camping trips in the Teen Adventure Program. Both Summits also provide transportation from nearby airports.

Costs at the Summits vary, according to the type of accomodations and number of people per room. Housing and meals range between $127 and $243 per single adult, and $302 and $551 for a family of four. Tuition is $95 for adults; $50 for teenagers in the adult program; $45 for youths in the teen program; and $40 for children enrolled in the Ranger Rick Youth Program.

For more information and registration forms, write Conservation Summits, National Wildlife Federation, Dept. BA, 1412 16th Street, N.W., Washington, D.C. 20036.



THINK TWICE

Many growers resist the idea of double cropping because of the pressure of time. It's time to think twice. With ORTHO PARAQUAT CL plus a residual herbicide you can actually harvest one crop and plant a second the same day. PARAQUAT is a fast-acting herbicide that kills a broad spectrum of unwanted weeds and grasses. You can plant land treated with PARAQUAT immediately. You plant right into the stubble of the preceeding crop with no fuel consuming plowing or discing.

The savings on fuel are sizeable. You also save on time, labor, and equipment usage costs. For best results, apply PARAQUAT with ORTHO X-77® Spreader.

DANGER: PARAQUAT is highly toxic if swallowed and should be kept out of the reach of children. To prevent accidental ingestion, never transfer to food, drink, or other containers. Read the label carefully and follow all directions, danger statements, and worker safety rules. Restricted Use Pesticide. Use all chemicals only as directed.

Beware the wood tick — his bite is worse than his bark

HARRISBURG — Its tick time again in Pennsylvania and hikers and campers are warned to be on the alert for these insects which can inflict a nasty bite and possibly cause a serious infection.

Gary E. Jones, medical entomologist in the Deparment of Environmental Resources, said ticks become active about this time of the year when the weather begins warming up, and are more abundant in the southeastern portion of the Commonwealth.

Ticks and Rocky Mountain spotted fever have always been synonymous but although there are some 20 species of ticks in Pennsyvlania only two are carriers - the American dog tick and possibly the lone star tick. A third, the brown dog tick, generally becomes a serious pest in the house.

Both the American dog tick and the lone star tick remain active from about mid-April to the end of November, but the brown dog tick lives in the house and may be active all year long.

The American dog tick, once limited to the southeastern and southwestern portions of the state, has expanded its range and is becoming very common except in the mountains and the northcentral part of the state. The lone star tick is limited in range to the Philadelphia area.

Hikers and campers should check themselves and their companions frequently for any ticks. They often get on a person's leg and crawl upwards looking for a place to hide so it helps to keep clothing buttoned, pant legs tucked in socks or boots and shirt tails. Check the scalp since they often hide in long hair.

Usually they can be removed with the thumb and forefinger, or tweezers if available, but be sure to monitor the entire tick is removed. Breaking off the mouth parts may cause infection. Use gloves or cover fingers with a piece of paper to prevent infection when handling ticks.

Berks 4-H Beef Club schedules spring show

READING — On Saturday, May 24, the Berks County 4-H Baby Beef Club will hold their spring show.

The event is to be held at Ken Rose Farms located one block east of Route 222 on Route 73. Arrival time will be anytime after 8 a.m. The show will begin at 10 a.m. Animals should be trained, washed and clipped before the show. Only touchups will be allowed at the event.

Fitting and showing classes will be held. Ribbons will be awarded on the Danish system.

Greg Snyder from the Lehigh County 4-H Club will judge the event. Following the show, Mr. Snyder will present a fitting and showing demonstration.

The show, an educational and fun event, is conducted for the benefit of all Beef Club members. Rain date is May 31.

Chester County Dairy Princess Pageant May 31

OXFORD — On Saturday, May 31 at the Oxford Research Club, Locust Street, five enthusiastic young ladies will vie for the title of Chester County Dairy Princess 1980.

Each of these young ladies are qualified, knowledgeable "dairy" promoters with an active involvement in dairying.

Yvonne Jolene King, 20 year old daughter of Mr. & Mrs. Joseph King, Cochranville, a graduate of Octorara High School is currently a student at Goldey Beacom College. Yvonne was very active in school being a member of student council, National Honor Society, Future Business Leaders of America as well as concert and marching band. Currently while attending college she has made the Dean's list. The King family operates a Holstein dairy farm with a milking herd of seventy-five.

Diane Marie Weaver of Narvon, is the daughter of Earl R. Weaver, Akron. This 18 year old contestant is the herdsman for Robert Campbell. In Ephrata High School, Diane was known for her active roll in FFA, the dairy judging team and her church youth group activities.

Suzanne Yeager, daughter of Mr. and Mrs. John W. Yeager, Phoenixville, attends Phoenixville High School. This 16 year old contestant is very active. She enjoys hockey, basketball, LaCrosse, is a member of the girl's varsity club, treasurer of Tri-Community 4-H Club, and her youth group. Even with all of her activities, Suzanne finds time to help with the Holstein herd of fifty.

Lisa Laffey, Cochranville, is the daughter of Mr. & Mrs. Norman G. Laffey, Sr. A student at Octorara High School, Lisa plans to attend college after graduation. She is active in many clubs including 4-H for 6 years, yearbook staff, and National Honor Society. The family farm is a busy place with a 300 cow Holstein herd.

Elizabeth G. Woolaston, the daughter of Charles T. Wollaston, Toughkenamon, is a student at Kennett High School. Betsy enjoys Manor 4-H Club and serves as vice president of the London Grove 4-H sewing club. The Kennett school band welcomes her as a member. Although, Betsy is undecided as to what to do after graduation, the Jersey herd at home keeps her busy now.

The Chester County Dairy Princess 1980 will attend and participate in the Pennsylvania State Dairy Princess Pageant in September.

The local pageant is open to the public starting at 8:00 p.m. and followed by a reception for all in attendance. Admission is free, plan now to attend.

Berks Blueform winners announced

LEESPORT — County entrants for the 1980 National 4-H Awards Program were judged Tuesday, May 6, at the Berks County Agricultural Center.

4-H members submit a Pennsylvania 4-H Members Record Book, commonly referred to as a Blueform. A Blueform is an organized presentation of what a 4-H member has learned and accomplished through years in 4-H. The Blueform entries are judged on the depth, variety, progression, and values obtained from 4-H projects; activities they have participated in, both in and out of 4-H; and a 4-H story recording progressive growth in learning and maturity through 4-H.

Berks County winning Blueform entries will be sent to the Pennsylvania State University for competition with 4-H'ers from across the state. Winners chosen at the State Level (Keystone Winners) will be interviewed and hopefully chosen for competition at the National Level, which includes a week's trip to the National 4-H Center in Chicago, Illinois.

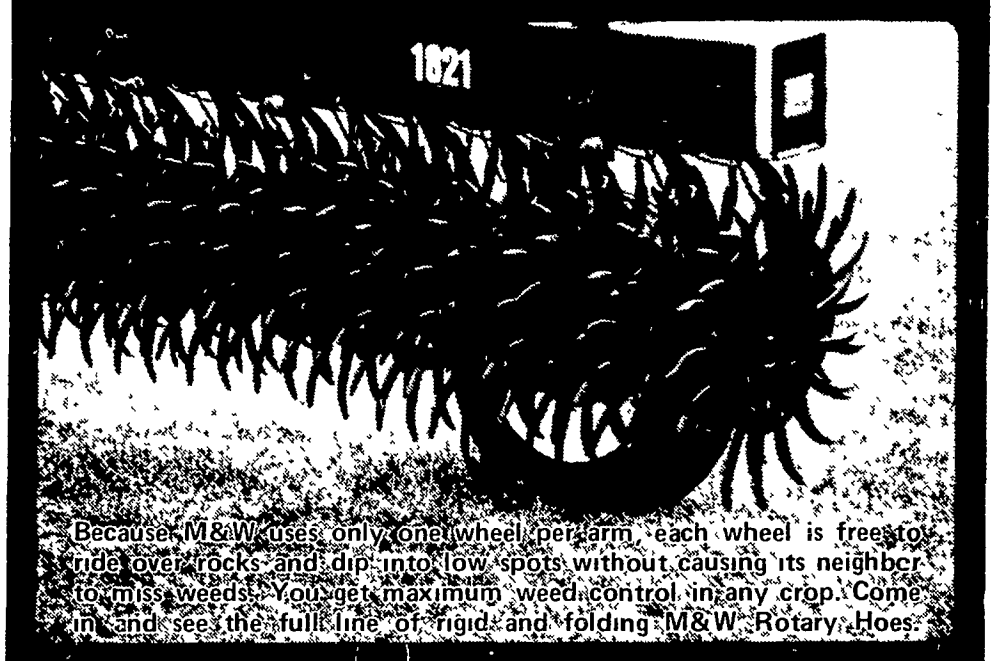
This year's Berks County winners and the project categories are as follows: Danielle Yoder, Tilden Club, citizenship & wildlife; Cheryl Adam, Virginville Club, leadership and swine; Judy Malsbury, Rehrersburg Adventurers, citizenship and food preservation; Keith Shollenberger, Tilden Club, leadership and health; Darlene Dietrich, Baby Beef Club, beef and achievement; Dorene Hertzog, Kutztown Club, consumer education; Scott Miller, Virginville, dairy; Barbara Schroeder, Kutztown Club, foods and nutrition; Jamie Batz, Rehrersburg Adventurers, gardening; Jayne Malsbury, Rehrersburg Adventurers, dairy foods; Allan Rohrbach, Virginville, agricultural; Connie Ohlinger, Northern Berks Dairy Club, achievement; Pamela Keeney, Rehrersburg Adventurers, clothing; and Christine Rebman, Rehrersburg Adventurers, home management.

Other senior entries included Jan Adam, Virginville; Eileen Fisher, Conrad Weiser Clovers; Kara Seiler, Virginville; Cheryl Clayton, Exeter Pony Pals; Terry Snyder, Virginville; and Mark Rohrbach, Virginville.

Junior entries from the Virginville Club were Todd Miller, Lisa Kieffer, Clarence Leatherman, Valerie Rentschler, Gary Rohrbach, Heidi Springer, Lynn Krick, Charles Seidel, Douglass Beck, Henry Seidel, Steven Rohrbach, Brian Blatt, and Kari Bitting. Other junior entrants were Patricia Dreisbach, Northern Berks Dairy and Nannette Coryell, Rehrersburg Adventurers.

Judges for the competition were Duane Physer, Berks Soil Conservation Service; Mary Ann Chelius, Public Relations Director, Boscov's; Paul Schwartz, Berks Energy Management Office; Elizabeth Snyder, Music Teacher; Charles Hawman, Berks Cable T.V.; and Judy Myers, Berks County Intermediate Unit teacher.

THE M&W ROTARY HOE IS ONE STEP AHEAD OF MOST OTHERS



Because M&W uses only one wheel per arm, each wheel is free to ride over rocks and dip into low spots without causing its neighbor to miss weeds. You get maximum weed control in any crop. Come in and see the full line of rigid and folding M&W Rotary Hoes.

Deutsch visitors

(Continued from Page A32)

has become a true international week, with three German visitors in Friendship Force and a couple from England who are visiting just two nights.

Tiz Williams said, "We feel this program and the opportunity to do this sort of thing is much more important than to take a vacation to Bermuda or some where. We love it."

The Williams went to Mexico on an exchange through Friendship Force two years ago, and jumped at the chance to serve as hosts when the Lancaster Exchange was broadened to include the Harrisburg area.

Tom's parents, Mr. and Mrs. Samuel Williams, are in West Berlin with the Friendship Force.

The Williams are hosting three Germans, one of whom is Mary Lou Gluckselig and her 14-year-old son Alex Hartmann. Tiz related that Frau Gluckselig works in intelligence in Berlin and gets up daily at 4:30 a.m., gets her three children off to school and works until 5 p.m. In Germany, shops close at 6 p.m. so there is little time to go shopping.

On her trips around the Dauphin Co. countryside, Frau Gluckselig noticed the sturdy mailboxes at the end of everyone's lane, and decided she wanted to take one home with her. So a trip to the hardware store allowed her to make this unusual purchase. Tiz said Frau Gluckselig complained that her mail is often wet and the mailbox is rusty.

Thomas Mueller, 28, is an electrical engineer, and is intrigued with the Williams' plan to construct a methane generator on their dairy farm. "He is impressed with that," Tiz said.

They have kept a busy schedule including a visit to the Governor's mansion in Harrisburg where the Germans staying with their Harrisburg hosts were greeted personally by Ginny Thornburgh, wife of the Governor.

Tiz, mentioned the one thing her three German guests noted were the large number of overweight people they encountered on their trips.

One day the entourage stayed at home on the farm, working together on projects in the house and in the barn. The men worked on building repairs, including rebuilding some stairs. Tom said they were "building steps to international understanding."

Mr. and Mrs. Robert Bare, 815 Waterfront Drive, Lancaster, are hosting 34-year-old Christine Boker, also from West Berlin. Elva said, "We've learned that we are very fortunate. Christine remembers crossing the border into Berlin from East Germany when she was ten years old."

Elva related that her guest told the Bare's that she lost her father in the war while her mother was pregnant with her. "Christine said that none of her girl friends had fathers as they were growing up."

Elva added that Christine recalled going to farms at night to buy milk because the farmers were forbidden to sell their milk to anyone but the East German government. She also recalled picking up potatoes from fields for food.

Elva said, "Christine is very appreciative and adaptable and eager to see this country. She is very knowledgeable, but she had never heard of the Amish and Mennonites. She found it very interesting, but could not understand that they do not use electricity."

Another surprise for Christine was that her guest family goes to church every Sunday. She admitted that she attends only on Easter and Christmas.

Political discussions have added another dimension to the visit, and Elva said they have learned about the situation between East and West Germany. Christine told them that when her family made its decision to leave East Germany, they came with none of their possessions, at night, and without telling anyone of their plans.

Wayne and Evelyn Brubaker, 1290 Rohrerstown Road, Lancaster, have opened their home to Horst and Barbel Gruen, also of West Berlin. "They love it here," Evelyn says. "They love the countryside and are impressed with how nice the people are."

Evelyn said in a letter exchanged before their arrival, Barbel made it clear that "we want to visit with you" and not rush around touring.

The Gruens made what seems to have been an obligatory trip to Park City, and put in long hours of very carefully selected shopping. Evelyn said, "Barbel is a very alert buyer and they felt things were less expensive here. But they said, 'We would get tired shopping there - small shops are better.'"

Although the Gruens are apartment dwellers, Evelyn said they were very interested in her garden and love the food in this part of the country.

Evelyn summed up her feelings by saying, "This has been very worthwhile. We need more of this. There is an altogether different relationship when you meet someone than when you just read about them in the paper and see them on television.

In our home, we hosted three German visitors, two from West Berlin and one from Gelsenkirchen in West Germany. The three women were very eager to see everything, saying, "We can sleep in Berlin".

Perhaps the most difficult thing for them to understand was the Amish way of life, which they had not heard of before. They found their religious beliefs difficult to understand, but expressed a deep interest in how they maintain their simple lifestyle.

They have heard much about the American way of life, and Barbara Mewis said, "We have heard that it is a plastic society." She explained that Germans think Americans use a lot of credit cards and disposable items. She said her opinions have changed.

Barbara and Edith Henke showed fear of the large Holsteins they saw on a visit to a dairy farm, but Kristine Jockel was unafraid. As a young girl in East Germany she milked cows to earn spending money and worked in the fields as necessary.

Kristine, whose family escaped from East Germany through Berlin before the wall was built, held very definite opinions about the evils of Communism. She still has many relatives living in East Germany and relates that there are few consumer goods available. Kristine's English is limited because as a child in East Germany she studied Russian for eight years.

For Barbara and Edith, it was a great surprise to find that it is not possible to travel from our semi-rural home by bus or taxi. They would gladly have used public transportation to spare us any inconvenience. But we explained it is not possible here, and a car becomes a necessity.

Blue jeans were on my guests' shopping list, with the price being better here than in Germany.

This afternoon, the visitors must say "Auf Wiedersehen" to their newfound friends in Lancaster and return to their native West Berlin. Nevertheless, the road to international understanding has been made smoother by the newly forged friendships and the deeper understanding acquired by both the Germans and the Lancastrians.

The world surely seems a little smaller to these new friends.

PASTURE NUTRIENT BALANCER

As you know good pasture provides an excellent source of protein during the spring and summer months. In fact, lush green pasture may be as rich in protein, on a dry basis, as corn gluten feed or brewers' dried grain Occasionally, some persons become so enthusiastic about the nutritive merits of pasture that they conclude it is fully the equivalent of a protein-rich concentrate This is a considerable exaggeration.

In two important respects the best of pasture differs decidedly from a high-grade concentrate ration. This is in the percentage of fiber (fiber is undigestable and has no feed value) and consequently in the TDN or net energy. Lush pasture will usually contain 18 to 20 percent fiber compared to approximately two percent fiber in ground corn (when both are dried to the same dry matter content.)[1] Since it is impossible to balance rations for grazing animals, energy, vitamins and minerals should always be made available. To insure that the animals nutrient requirements are met during these upcoming months, we recommend that you consider MOPRO 16% Liquid Protein fed free choice

MOPRO 16% Liquid Protein is a High Energy Feed which has been specifically designed to economically carry more cattle per acre while increasing gains on pasture without grain Our stable guaranteed vitamin and mineral package has proven helpful in the prevention of pinkeye, thrush, and ringworm while improving general herd health and conception rates. Good pasture along with MOPRO 16% Liquid Protein supplies the most economical feeding program for grazing animals during the growing season.

Here students Sue Albright, left, and Lisa Mumma both from Manheim, egg the peeps on in their pecking efforts.

School is for the birds

BY PAT KAUFFMAN

MANHEIM — Mary Murphy has hatched up a plan to keep her sixth grade students busy and involved through the last trying weeks of the school year.

Mary teaches a sixth grade class at H.C. Burgard Elementary School in Manheim. For the past four years, she has been teaching a unit on embryology during the last 9 weeks of school.

The unit centers around the 4-H embryology project. And the incubator and the eggs are placed in the classroom by Nancy Meyers, Lancaster 4-H agent. But what Mary does from there is the special part.

Before teaching in Manheim, Mary had opportunity to observe an embryology unit used in the Harrisburg school system. And from her observations of that unit, and a lot of personal input, she has fashioned a teaching unit that encompasses the whole of classroom activity.

Upon entering the room, the visitor notes the busy activity of a cluster of youngsters. The kids are huddled around an incubator containing 14 eggs, each numbered. Mary explains that each student is assigned an egg.

Hatching time was near, and the students were as fretful and anxious as new parents. Each egg was observed for the progress its occupant was making at the job of pecking. And one egg was causing considerable concern due to the blood that was visible. That egg was according to the students, in trouble. Mary reminded the class that death was a part of life, and the observer was made immediately aware of the avenues this amazing teacher uses to direct relevant information into her students minds.

Mary starts her teaching unit 3 weeks prior to the arrival of the incubator. During these weeks, the students work with graphs and charts, learn the terminology connected with the project, and talk about the life cycle of the chick. In addition, they are each required to compare the life cycle of the chick to that of one other animal. Mary says that the project uses all of the skills and subjects normally taught in the sixth grade. And it uses them in a way the kids find fascinating and enjoyable. Therefore, she says, they are more receptive to what they learn.

Once the eggs are placed, the students take turns rotating the eggs and the eggs which are numbered, are assigned to students as 'their' egg. During the hatching process, the eggs are candled daily to determine their progress. And when an egg appears in trouble, the class opens it and discusses the problems that contributed to the loss of the chick. Jars with embryos in all stages of development are on the classroom shelves, and the students compare the vascular system of a healthy embryo to that of the egg with problems.

Toward the end of the three week incubation period, the students show all the symptoms of first time parenthood. Pacing in front of the incubator is not uncommon. And classwork then revolves around writing poems about the chicks, and continuing graph and chart work on the developmental stages.

As soon as the first chick hatches, the group will isolate it from all the others to hatch later. During the last three weeks of the project, the group will observe the inherent behavior characteristics of the isolated peep as opposed to the behavior of the group. And near the end of the three weeks, the youngsters will place the peep that has previously been held in solitary confinement with the group and the class will discuss the behavior characteristics of a group. This they will relate to the problems they will face next year as they enter the junior high. This one aspect of the project alone is valuable to the youngsters because it gives them a chance to vocalize their fears and learn to deal with the problems of being in a new environment.

At the end of the unit, Mary has promised the class a football game. And the youngsters are waiting impatiently. The football game will be played by the peeps. Now while this may seem far-fetched to the average listener, Mary assures all that it can be done. She explains the play starts with a small white football made of a sliver of paper. And she gives a play-by-play of football games held in previous years, so that it all begins to seem believable. But then again...

The atmosphere in the classroom says as much for the program as anything. The students are pacing like expectant parents before the incubator. Those that are not are seated thumbing through large volumes of reference materials or working busily on charts, graphs or poems about the birds. And the sign on the wall of the classroom sums up the light-hearted approach this energetic teacher takes to the task at hand. It says simply, "school is for the birds."

Field work still trailing last year

HARRISBURG — Commonwealth farmers made headway during the week ending May 12, even with traces of rain throughout the week. Farm reporters rated nearly six days suitable for fieldwork statewide. However, southern Pennsylvania farmers only had five suitable days, according to the Crop Reporting Service.

Field activities included fixing fences; spreading lime, manure and fertilizer; discing; plowing; spraying; pruning fruit trees; cutting asparagus; setting cabbage plants; planting corn, potatoes, alfalfa, oats, soybean and sweet corn.

Statewide, reports of fuel supplies were mostly adequate to surplus. LP gas was rated 95 percent adequate and five percent surplus. Diesel fuel and gasoline were both rated at 93 percent adequate and seven percent surplus.

Statewide, soil moisture is rated mostly adequate. Soils in all areas were reported approximately equal, at 84 percent and 86 percent adequate moisture.

Plowing is 77 percent complete, behind last year's 85 percent. Spring plowing stands at 80 percent done in the north, 79 percent in the central area and 68 percent done in the south.

Oats are 84 percent sown, compared to the 90 percent sown in 1979. The percentage of oats sown varies from 80 percent in the south, to 86 percent in central counties and 90 percent in the south.

Potato planting is still lagging at 49 percent, behind last year's 63 percent. The northern counties report about 25 percent complete, with central counties standing at 66 percent planted and the southern section of the Commonwealth reporting a little better than 50 percent planted.

Corn planting, now at 30 percent, compared to 38 percent complete last year at this time and an historic average of 29 percent. Progress of corn planting is 24 percent in the north, 30 percent in the central counties and 39 percent planted in the southern area of Pennsylvania.

Soybean planting statewide stands at 10 percent, compared to seven percent in 1979. However, the major portion has occurred in the northern counties where 21 percent of the crop is planted. Central and southern counties report less than five percent complete in soybean planting.

The winter grains continue mostly in the pre-boot stage. However, barley is 27 percent booted, the same as last year and six percent headed which compares to 12 percent in 1979. Wheat is 13 percent booted compared to last year's 30 percent.

Alfalfa hay stands are reported in 2/3 good and 1/3 fair condition, with insect and spraying activity increasing. First cutting of alfalfa is beginning. Clo-tim stands are 2/3 good and 1/3 fair condition. The amount of feed being obtained from pasture is mostly average.

Peaches are reported at 73 percent in or past full bloom which compares to 83 percent last year. Cherries are reported at 82 percent in or past full bloom, the same as last year. Apples are 55 percent in or past full bloom, slightly behind the 62 percent in 1979. Reports of scattered frost last week may have hurt some spots, however, there were no serious reports at this printing. Good progress was reported for vegetable planting of sweet corn, cabbage and green peas.

Wear protective gear while operating your tractor: safety shoes and bump cap, respirator when spraying or if conditions are dusty, ear protectors if tractor is cabless.

Gypsy moth damage could increase tenfold

HARRISBURG — Gypsy moth caterpillars are expected to chew their way through 10 times as many acres this year as they did last year, according to the state Department of Environmental Resources.

The outlook on the number of acres expected to be defoliated by gypsy moths in Pennsylvania in 1980 was made by James O. Nichols, chief of DER's Division of Forest Pest Management in Middletown.

Nicholas said the number of acres defoliated in 1979 by gypsy moth caterpillars dropped to 8,552 in 11 counties, considerably below the record high of 1,296,550 acres defoliated in 28 counties in 1977.

Nicholas said he expects an increase in the number of acres defoliated in 1980. "But how high? A 10-fold increase would not be a surprise; even a 25-fold increase is possible;" he said.

In response to requests from residents and county governments, DER this year plans to spray approximately 27,000 acres of severely infested forested residential and recreational land in 14 counties. This is more than double the 10,941 acres sprayed in 1979, Nichols said.

A contract for the spraying has been awarded to Agrotors, Inc., of Gettysburg, and Helicopter Applicators, Inc., of Myersville, Md., on a joint venture bid, Nichols said.

The spraying program, expected to get underway early in May, will cost $199,000, with the money coming from the state, county, and federal governments.

The spraying program will involve use of Dylox 1.5 oil insecticide and Dipel 4L insecticide.

Nichols said Dylox has been rated safe to people, pets, property, fish, wildlife, and honeybees. Dipel is a biological-type spray material which will be used on 900 acres to test its feasibility for more widespread use as alternative to chemical sprays, he said.

Nichols said the gypsy moth problem was almost non-existent in the state last year because of the success of biological control efforts in non-spray areas. He said these were principally parasitic flies and wasps that prey on the caterpillars.

However, Nichols said when the moth population gets too low, parasitic insects disappear since they depend on gypsy moths for survival.

"Then the moths begin to rebuild," he said.

Last year, for the first time since 1968, no defoliation was recorded in Wayne, Pike, and Monroe counties in the Poconos, he said.

However, Nichols said another "significant increase is occurring in southern Monroe County, where the last heavy outbreak occurred in 1972 and 1973."

He said this may indicate a seven-year cycle between outbreaks in specific locations.

Nichols said evidence indicates nearly all gypsy moth infestations will collapse after two years of severe defoliation in a particular area. The collapse is due to starvation, disease, and parasites introduced into the area, he said.

Quicker collapses can be anticipated eventually as a result of the biological efforts, he said.

Nichols said interfering with these collapses by widespread chemical spraying of uninhabitated forests "invites perpetual problems." Spraying, he said, will not completely eliminate all gypsy moths and within a year or two the remaining insects "will repopulate to destructive levels."

However, evidence has shown that relatively small-scale programs, such as the one to be carried out this year, do not interfere with the overall gypsy moth collaspe in an area, he said.

Counties and acreage to be sprayed in this year's program are Carbon, 42; Centre, 1866; Chester 1749; Cumberland 2469; Huntingdon, 513; Juniata, 1935; Lackawanna, 516; Mifflin 1908; Monroe, 7098; Montgomery, 867; Perry, 7365; Pike, 36; Wayne, 393; and York, 195.

Select shrubs for shady areas

LANCASTER — People who have lawns with more shady than sun-basked areas can still have a choice in landscaping decisions by selecting shrubs that tolerate the shade.

Plants that are established in suitable areas require little maintenance and enhance the beauty and contrast around the home.

Before selecting shrubs, consult your local nursery for species that grow best in your particular area. The following descriptions are of some of the more common shrubs that will do well in shady areas in Southeastern Pennsylvania:

Aralia

Five-leaf aralia is a deciduous shrub that grows from 8 to 15 feet high. It is valued for its shiny foliage and because it withstands city conditions.

Warty Barberry

Warty barberry is an evergreen shrub that grows to a height of 4 feet. It is valued for its golden yellow flower and is chiefly used for hedges.

Gray Dogwood

Gray dogwood is a deciduous shrub that grows 6 to 15 feet tall. It is valued for its white flowers in June and its white berries. Gray dogwood is used in shrub borders and as a screen.

Mountain Laurel

Mountain laurel is an evergreen shrub that grows anywhere from 8 to 20 feet high. It is valued for its large clusters of pink and white flowers. It is used chiefly in woodland plantings and does well in moist acid soils.

Rosebay Rhododendrun

Rosebay rhododendrun is an evergreen shrub that grows 15 to 20 feet high. It is valued for its hardiness and is used as a screen or an ornamental shrub.

Mapleleaf Viburnum

Mapleleaf viburnum is a deciduous shrub that grows in height from 4 to 6 feet. It is valued for its ability to grow in shade and its pale pink color in fall. It is used chiefly in woodland plantings.

For further information on shrubs for shady areas, send 30 cents to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Ask for U.S. Department of Agriculture, Home and Garden Bulletin No. 142.

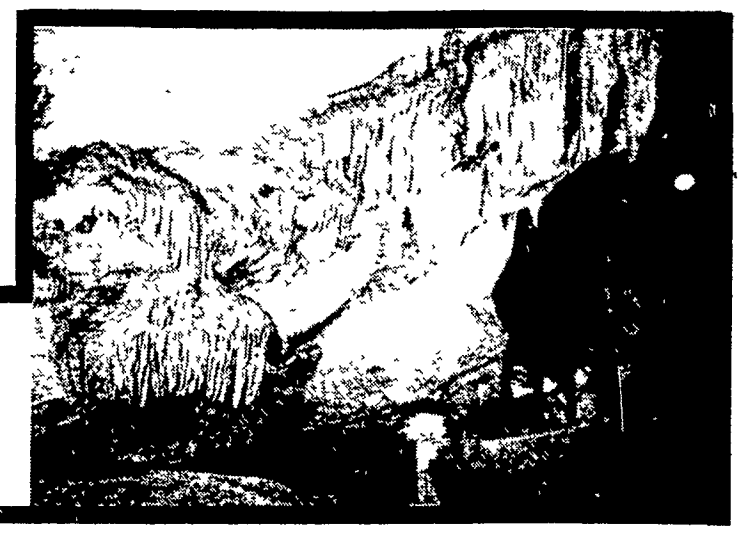
BOAT TOUR OF UNIQUE PENNS CAVE America's All-Water Cavern



VISIT 3 TOP FAMILY DAIRY FARMS

DAN SCHRACK & FAMILY, CLINTON COUNTY

In 1979, Dan was the top alfalfa grower in the state. Dan farms 700 acres and milks 210 cows. Dan raises all his own replacements and has 240 head of young stock. He presently processes feed through eight 2070 HARVESTORE structures for haylage and high moisture shelled corn. See Dan's 6219 SLURRYSTORE.

JOE & GLADYS HARTLE, CENTRE COUNTY

Joe was the 1979 Pennsylvania Master Farmer. The Hartle's 245-acre farm has a tie-stall barn and a herd of 66 cows. The 1979 herd average was 20,500 lbs. milk and 776 lbs. B.F. The milking cows are on a feeding program of haylage, corn silage, and baled hay. In 1979, the Hartle's spent less than $8,000 for off-farm feed purchases.

RICK & EVAN HOLMAN, CENTRE COUNTY

The Holmans have a 60-cow herd on their 145-acre farm. They have 50 head of young stock. The 1979 herd average was 19,130 lbs. milk and 707 lbs. B.F. They spent less than $9,000 for off-farm feed purchases. The feeding program consists of haylage, corn silage & high moisture corn according to production and 40% supplement.

Finish 10 days sooner on 32 pounds less feed.

Weight Lifter™ puts the amino acids in balance.

Wayne® Weight Lifter™ feeds are different from ordinary protein formulations. They balance the amino acid requirements precisely. So your pigs get the right amount required to grow into strong, efficient hogs.

And reduced amino acid excess means no costly protein wastes. **Just 15% protein savings.**

Research and field tests show Weight Lifter improves hogs' efficiency, resulting in 7.4% better feed conversion and 9.1% increase in average daily gain. That means hogs should be ready for market 10 days sooner on 32 pounds less feed.

Weight Lifter fits your feeding system.

Use Weight Lifter for your breeding stock, weaned pigs and finishing hogs. It's the convenient feeding program that reduces your feed inventory and labor.

Get on the Weight Lifter Program. It's proven to increase hogs' efficiency and reduce protein costs.

Trusts save $1000's when settling estates

BY SHEILA MILLER

LITITZ — In last week's column we began the complex look at an estate planning tool called a trust.

We learned that a trust can be used to see that a person's estate can be transferred in special ways to a wife, children, or grandchildren, and that it is a legal tool for cutting he cost of inheritance taxes.

We also heard that inflation will be doubling the value of farm assets in the next ten years if it continues at its present rate.

With the increase in value goes an increase in taxes unless a plan is developed to avoid them.

We looked at the current legislation and found that farm women need to take a closer look at the titling of assets and documenting their unpaid contributions to the successful farming operation, Otherwise, unless the wife can prove she helped in the purchase of the farm and its equipment, most officials assume everything should be in the husband's estate.

This week we will be checking out the Tax Reform Act of 1976 and inflation a bit closer.

The 1976 legislation set up a taxation system which was originally designed to help the small businessman and the farmer. It allowed for a marital deduction when a spouse's estate was settled which permitted half of the adjusted gross estate—or $250,000, which ever was higher—to be exempted from taxation.

At the time, this seemed like the federal law makers were taking a logical step in helping to preserve the small farm and business. Then inflation reared its ugly head and threw a monkey wrench into the works.

What happened was that a farm's assets could not exceed the $500,000 mark in order for the 1976 Act to be of any use.

According to R. Darrell Ford, of Estate Archetypes, Inc. in York, "inflation has grabbed a hold of the small farm and pushed it over the $500,000. The 1976 law which you have been hearing about over the past four years, I predict, is no longer of any benefit to most farmers".

Even if the farm is worth only $500,000, what happens to it after the second spouse dies. We already said the first surviving spouse would be able to claim a marital deduction on 50 percent of the adjusted gross estate of the deceased.

Now the surviving spouse dies, and for the second time

in that generation the estate is hit with taxes, both federal and state, and this time there are no marital deduction exemptions.

To avoid this double taxation, Ford recommends that a trust be investigated and set up on an individual operation basis. "For $200-$300 of legal fees for drafting an alternative plan, a farmer can save several hundred thousand dollars on a million dollar estate."

Trusts save $1000's

(Continued from Page B2)

"Some people say that whatever we have left after taxes to pass on to the children is more than we started with, and as long as the children aren't involved in the business, they can afford that luxury," said Ford.

But, he recalled a case where 52 head of dairy cattle were put on the block in order for the children to come up with slightly less than $100,000 to meet the estate settlement obligations. As a result, the children lost an integral part of their productive farm operation, and suffered a financial hardship until they could replace the cattle they were forced to sell.

This type of estate settlement ordeal, Ford said, is like raising an elephant in the basement. "By the time it's grown, you either have to tear down the house or dismember the elephant to get it out. You can't sell off the livestock, equipment, and inventory to meet the tax obligations or the farm is no longer operational."

To avoid this dilemna, Ford said that a trust can be set up to maximize the marital deduction exemption. He recommended that the following statement be included in the estate plan:

"In the event of my death, pay out an amount of property to my wife (or, husband), when taken into consideration everything she owns jointly, that would exactly qualify the marital deduction, paid in dollars or in kind." The rest of the estate would then be placed in trust for the surviving spouse's use until death. It then would pass on to the children without being taxed a second time.

By doing this, Ford pointed out, the surviving spouse is saved the ordeal of hearing differing opinions from children, relatives, salesmen, and other well-meaning people, on what to do with the property. "It's a trying time for a widow or widower—it's a time when they are least likely to be equipped in making a decision because of the trauma of dealing with death."

Ford summed up his feelings on the value of a trust as an estate planning tool when he spoke of a case involving a farm couple we'll call Mr. and Mrs. Corn.

Mr. and Mrs. Corn had a successful farming operation somewhere in Pennsylvania. When Mr. Corn died, the couple was somewhat prepared for they had a will.

When the Corn's bought their farm in 1952, it cost them $20,000. Over the year's, the farm saw new equipment and more cattle call it home.

When Mr. Corn died, the gross value of his estate came to $1,145,000, including the value of the real estate, livestock, inventory, cash on hand, life insurance, market securities, and interest.

In settling the estate, Mr. Corn's executor took off the necessary tax exemptions for Mrs. Corn, including rights-of-survivorship and marital deduction, and now the taxable estate came to $551,000.

Mr. Corn's estate taxes amounted to $191,000.

Since Mr. and Mrs. Corn did not have the legal tool, the trust, working for them, the remainder of the estate, after taxes, passed totally to Mrs. Corn. When she died the following year, the estate taxes due on her estate came to $360,000, since there was no longer any marital deductions or rights of survivorship.

Ford pointed out that if the Corn's had set up a proper trust, it could have made a difference in the amount of taxes the estate had to pay. Although the trust would not effect the estate taxes on Mr. Corn, Mrs. Corn's tax costs would have been reduced from $360,000 to $182,000, a savings of $178,000.

Elvin Byler, a Lancaster attorney also recommends a trust for easing the sting of inheritance taxes. He said that a trust can be set up to pay all the earnings of the whole value of the estate to the surviving spouse, while setting up half of it for the children.

Or, he added, the trustee (the person appointed to manage the funds) could be instructed to pay the principal, any interest accrued by the property in the estate, to the spouse to meet the maintenance needs. "You can set it up with the right to withdraw $5000 each year, and what's left in the estate still won't be taxed when the surviving spouse dies."

Byler told of a farm family's experience with the powers of a trust. He said that the husband died leaving assets of $120,000. Half of the assets had been put into a trust, and half of them went to his wife. The farm itself, worth $88,000,

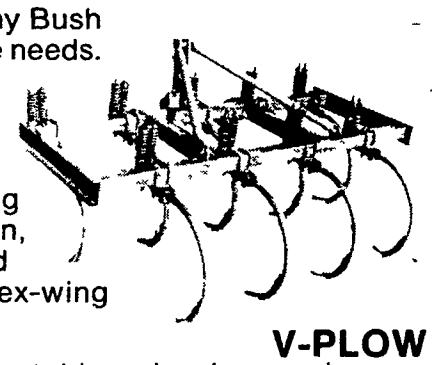
SEE HOW THEY RUN!

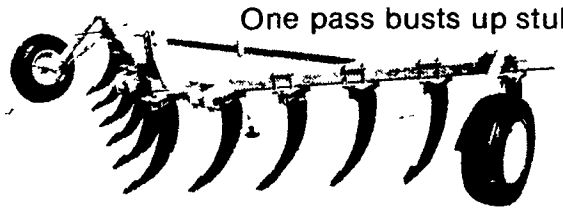
When you see how Bush Hog® tillage implements run and the quality jobs they produce, you'll be convinced **you** need Bush Hog! Thousands of farmers already know why Bush Hog has a reputation for quality, rugged engineering and top performance. The Bush Hog offset and tandem disc harrows, chisel plows, V-plows, field and row crop cultivators in operation on their farms prove themselves season after season.

See for yourself how Bush Hog tillage implements run on neighboring farms or ask your dealer for a demonstration. When you do, you'll know why Bush Hog is the answer to all your tillage needs.

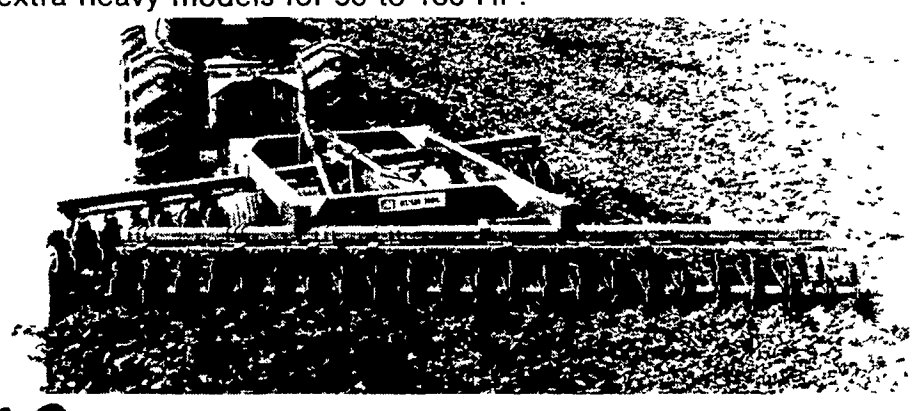
CHISEL PLOW
Chisel action leaves top residue to protect against wind and water erosion while mixing and loosening soil for greater moisture absorption, faster growth. Available in two and three-bar, lift and pull, rigid and flex-wing types, 5' to 30' widths.



V-PLOW
One pass busts up stubborn hardpan and opens the way for increased yields. Available in 3 to 11 shanks for 60 to 175 HP. Exclusive Bush Hog shank pulls easier to plow more acres with less fuel. Shanks available in 26" or 32" lengths.



MODEL 245 Here's 12' to 18'6" of penetrating power in a rigid, offset harrow. Available in standard, heavy and extra-heavy models for 95 to 150 HP.



BUSH HOG®
"It's not a Bush Hog if it doesn't say Bush Hog"

COMPARE! BUSH HOG ALWAYS COMES OUT THE WINNER.

Hormones keep cows cool

COLUMBIA, Mo. — Some day high producing dairy cows may receive a dose of "anti-stress" hormones before a heat wave or other stressful situation to keep their milk production from suffering or to aid in recovery from the stressful event.

This is what University of Missouri-Columbia animal scientists hope to prove from research they are conducting for a three-year study of heat stress on dairy cows.

According to Harold Johnson and Mary Bober of UMC's dairy husbandry department, this research is taking a two-pronged approach. The first is a short-ranged reduction in heat stress artificially. This means using fans, shade and shelters.

The longer range approach is the study of hormones and how they affect stress resistance and how stress affects them.

Johnson said that heat stress can significantly reduce a dairy cow's milk production.

"When the temperature stays above 90 degrees in the day with high humidity and above 70 at night you begin to see production losses.

"Your high producing cows are affected most.

"A cow that is producing 60 to 70 pounds a day may lose 5 to 10 percent of her production capabilities in a heat wave."

Johnson and his colleagues have found that cows lose certain hormones associated with milk production when exposed to heat stress while other stress hormones increase.

They hope to discover whether it will be possible to replace the hormone losses and decrease the hormone gains so the cow can be restored to its thermal norm which is about 70 degrees This should help dairy farmers reduce production losses caused by stress.

A cow may not recover its normal production for several weeks after being exposed to heat stress.

UMC researchers have found that five hormones in cattle are sensitive to heat and stress. These are triiodothyronine (known as T-3), thyroxine (T-4), prolactin from the pancreas, growth hormone from the pituitary gland and insulin.

"What we don't know is if body heat affects lactation or if body heat affects the hormones which affect lactation. This basic information is essential for implementation of corrective anti-stress practices."

Johnson said that heat is being used as a "control stress" during research but a long-range goal is to apply discoveries in this area to other stresses, such as those caused by transportation, fear and poor management.

This is the second year of the study the dairy husbandry department is working on in cooperation with the U.S. Department of Agriculture and UMC's department of agricultural engineering.

Trusts save $1000's

(Continued from Page B3)

was put in trust for the children.

The wife survived her husband for five years. When she died, the farm was sold for $400,000.

This amount, said Byler, went entirely to the children. "Not one penny of inheritance tax was paid on the $400,000 because the parents had a properly written will. Since the farm was in trust, it was shielded from the estate taxes. The only problem was the widow had to deal with the trustee, who was looking after her financially, for five years."

Byler cautioned against naming a child as the trustee in order to save the trustee fees charged by a bank or attorney. He said not only is it risky, because a child might turn against a parent since paying for their well-being would make the inheritance smaller, but because it puts the child in a tough spot.

The Lancaster attorney also explained the surviving spouse cannot be the trustee, although they can be one of a panel of three trustees. "The surviving spouse cannot vote at all when it comes to making payments to themself, and as one of a panel of three trustees, they can be outvoted."

One question that always pops up when discussing trusts and estate plans is how are the values of the farms decided. Since most of the worth of a farm estate is tied up in the land, who decides how much it is really worth in order to successfully plan an estate?

According to Richard Dennison, of the Pennsylvania Farmers' Association's legal services, the land "is appraised on an agricultural value provided it has been farmed by the decedent or a lineal descendent of the decedent for 5 of the 8 previous years before death, and that it will be farmed for 15 years by lineal decendents."

If the farm is sold or farmed by someone other than a son, grandson, father, grandfather, then the government tacks on a roll back tax which would have to be satisified for a clear title.

"If you use family farm appraisal, you'll have to have two appraisals: highest and best use and family farm appraisal," said Dennison. "There will be a 15 year lien against the property on the highest and best use tax, but the estate will only pay the tax based on family farm use. The highest and best use difference will be the lien recorded at the courthouse."

Estate planning is not an easy task at best, and there are millions of rules and regulations that come to play at a time when most people are not in the frame of mind for straight thinking.

But, said Ford, with functional planning, it's possible to have your cake and eat it too. With a trust as a tool, you can get income to the people you want to have income, and can minimize inheritance taxes, too.

In next week's issue of **Lancaster Farming** we will study the estate settlement procedure and what makes a good executor.

Leave young wildlife alone

HARRISBURG — The Pennsylvania State Game Commission is renewing its annual plea to persons sympathetic to wildlife to leave wild youngsters in their natural habitat

They ask that people avoid encouraging or enticing wildlife to congregate in areas where the creatures become troublesome.

With many young birds and animals in the field and forest at this time of the year, persons finding the tiny creatures may innocently believe the animals have been deserted or orphaned This is not usually the case

The parents, frightened by the approach of humans, have taken cover a short distance away. They will return to take care of their offspring as soon as they are alone.

Of equal concern are animals fed or otherwise attracted to particular locations, usually to be viewed by humans. Special problems are created by those who feed bears, inducing the cute, cuddly creatures to come to or remain in a certain area.

Later, these animals become a nuisance, constantly showing up for handouts, upsetting garbage cans, roaming through towns, climbing trees, or frightening residents

New Jersey 4-H clubs

COUNTY 4-H DAIRY JUDGING CONTEST HELD

FLEMINGTON, N.J. — The annual Hunterdon County 4-H Dairy Judging Contest drew eleven contestants from throughout Hunterdon County.

Karen Long, 15, Clover Hill, took first place in the senior division, followed by Jim Nelson, 17, Pittstown; Bob Hoffman, 17, Fairmont, Jim Stamets, Milford and Jeff Nelson also of Pittstown.

In the junior division, Mark Bodine, Stockton, was first. The top club award will go to the Milford 4-H Dairy Club, represented by the Nelson brothers and Stamets. Karen Long is a member of Mt. Airy Dairy Club, while Bob Hoffman comes from Fair Valley Community Club.

The 4-H'ers were required to judge a total of six classes of four cows each, starting with two classes of Brown Swiss at the farm of Mary Frances Bortz in Washington. They then judged a class of Aryshires at the Apgar farm in Asbury, followed by three classes of Holsteins at the Beatty farm in Bethlehem Township. David Douglass was the official judge. Karen Long, Jeff and Jim Nelson, Bob Hoffman, and Jim Stamets will represent Hunterdon County at the Annual State 4-H Dairy Judging Contest to be held July 9.

ACME LUNCHEON

CLEMENTON — On Tuesday, June 10, at 12:30 p.m. at the Camden County Extension Building, an Acme Luncheon will be held. Proceeds will benefit 4-H programs in Camden County.

For a donation of $3 you can enjoy a full luncheon, receive discount coupons good at Acme/Supersaver Markets and get all types of door prizes, states Donna MacNeir, 4-H program associate.

Tickets are available from the 4-H office on a pre-sale basis only from now thru June 1.

Acme prepares the complete meal using high quality food items. For ticket information call the 4-H office, 609/784-1001.

FOOD POTPOURRI

CLEMENTON — Teen 4-H members from Camden County presented a lively four-part food-nutrition program at the Camden County Extension Building recently.

Designed to inform 4-H leaders and members about up-to-date techniques, four members, Nancy Brekke, Dawn Donaldson, Jaelyn Rearick, all of Cherry Hill and Alexandra Ewan of Cedar Brook, each gave a food demonstration.

Nancy Brekke, an eight year 4-H member, presented wok cookery using techniques of stir-frying.

Dairy Foods, types and use, were discussed by Dawn Donaldson, who has been in 4-H for seven years.

And Jaelyn Rearick showed how bread affects and contributes to health. Jaelyn, in 4-H for seven years, has been active in the yeast bread program.

Alexandra Ewan demonstrated preparation of freezer jam. She has been a member of Simmer and Sew 4-H Club for five years.

Each girl is a state finalist for Club Congress, a national 4-H award event, held in Chicago, annually.

The four Camden County 4-H'ers took part in preliminary judging for the South Jersey region. They are now preparing for the statewide evaluation, which will select one 4-H member to represent each project area. The state winners receive expense paid week long trips to 4-H Club Congress in November; where they will meet state winners from all 50 states.

Nancy Brekke is a finalist in the food-nutrition program, Dawn Donaldson in dairy foods, Jaelyn Rearick in breads, while Alexandra Ewan is a finalist in both food preservation and sheep.

POMONA GRANGE 4-H CLUB MEMBERS

FLEMINGTON, N.J. — The Pomona Grange of Hunterdon County held a special meeting to honor seventeen 4-H club members from throughout Hunterdon County at the Hickory Grange in Jutland. The David H. Agans Memorial Award for outstanding 4-H leadership was presented to Michael Novak, 17, of Sand Brook, Delaware Township.

Following a covered dish dinner attended by over 60 people, an informational program about the Grange and 4-H was presented under the direction of Mrs. Samuel Haldeman, Pomona Lecturer. The program included a talk by Michael Millhime, 11, of Ringoes, about what Junior Grange means to him, and a slide talk by Barbara VanderBerghe and Michael Novak, Hunterdon County 4-H Queen and Escort about the 4-H Program in Hunterdon County. The awards were then presented by John Benedik Jr., Pomona Master.

Certificates of Merit in recognition of their accomplishments in the 4-H Program were presented to: Debbie Cerrato and Thomas Hoffman, Califon; Karen Ling, Delaware Township; Gloria Jakubco, Susan Pruchnicki, Robert Riccioni and Ericka Zipfel, Flemington; Karen Osmun, Glen Gardner; Jackie DeVries and Jacqueline Lewis, Lebanon; Donna Homulak and Michelle Yontz, Pittstown; Virginia Lawreck, Brad McFall and Tammy Woske, Readington Township and Allison Macomber, Stockton.

CLEAN UP CLUTTER AND CLEAN UP ON A REAL GOOD BUY

Here's the riding mower that keeps working after the grass stops growing. With an International® Cadet rider and lawn sweeper you pick up leaves and debris all fall.

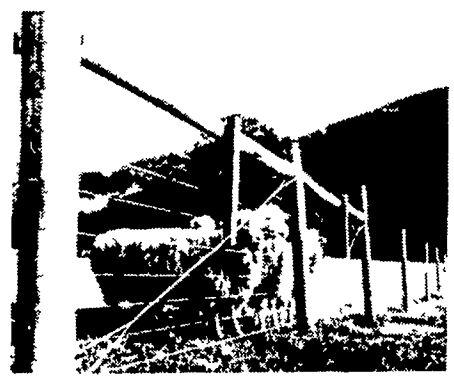
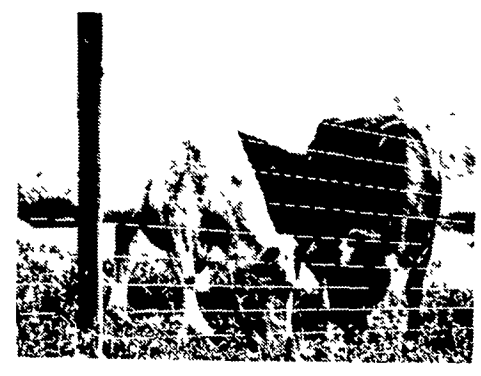
HIGH-TENSILE WIRE FENCING FOR CONTROL OF CATTLE, SHEEP, HORSES, HOGS, DEER, DOGS, COYOTES & RACCOONS





This fence is constructed with 10 strands of smooth, 12½ gauge HIGH-TENSILE FENCE WIRE - wire so strong (200,000 psi minimum ultimate tensile strength) and so durable (Type III galvanized) it is doing much to revolutionize farm and range fencing.

SECURITY WITH ECONOMY - Although new in this country, high-tensile wire fencing has been performing well on the vast ranches of Australia and New Zealand for 30 years. HIGH -TENSILE FENCE WIRE is twice as strong as barbed wire, easier to handle and safer for livestock. A ten-wire high-tensile fence costs about the same as a five-strand barbed-wire fence and 30% less than a woven-wire of equal height; but it lasts longer and looks neater with less maintenance than either of them.

ALL-PURPOSE VERSATILITY - High-tensile fencing uses the higher strength of the wire, so that - once up and stretched to 250 pounds minimum tension - each strand of High-Tensile wire withstands over 1,000 pounds of livestock pressure or low- temperature contraction without losing its elasticity. Tension is maintained by seasonal adjustment of permanent in-line wire strainers. Sheep do not like the wire's stiffness, and neither do horses; and cattle that have charged high-tensile fences have bounced back with no damage to their hides but no wish to try again.

ELECTRIC FENCES - High-Tensile Wire Fence also lends itself to electric fences, and various designs have been erected which turn away deer, dogs, coyotes and raccoons - even bears.

Moore takes hard look at red meat market

UNIVERSITY PARK — H. Louis Moore, livestock marketing specialist at Penn State, reports the financial position of cattle feeders and hog producers has deteriorated sharply in recent weeks.

Though beef production was down about 5 percent in the first quarter of 1980, pork production increased 21 percent and poultry production increased 9 percent.

Livestock prices have decreased because of huge total meat supplies and a weakening general economy — which has reduced consumer purchases of many items.

Pain for Cattle Feeders

Fed cattle prices in recent weeks have averaged $11 per hundredweight less than a year earlier.

Uncertain market conditions have made cattle feeders reluctant to sell the animals now finished and hesitant to purchase new feeder cattle. In mid-April, beef carcasses averged 650 pounds, up 15 pounds from a year earlier.

Markets have never been more uncertain than at present, and projecting for the future is risky.

High interest rates and increased input costs are discouraging feeders from putting cattle in feedlots, and this has caused a depressing of feeder-cattle prices. Adding uncertainty is the unknown influence of the 380,000 cattle in feed lots that can't be marketed for some time because of DES implants.

With a recession now upon us, it will be difficult for cattle prices to recover substantially in the weeks ahead. Some price improvement is expected, but prices aren't likely to move beyond the high $60's until after mid-year.

Inventory Reduction Stops

The drop in cattle numbers observed over the past four years has stopped—but just barely.

It is estimated that U.S. cattle numbers on last January 1 totaled 11 million head, up just 100,000 head from 1979. Rebuilding is likely to continue only at a slow pace in 1980, because the high costs of financing a major expansion program will be beyond the resources of most farmers.

As more cows and heifers are held for breeding, the culling rate will be reduced and total beef supplies will be below year-earlier levels through 1980.

It Finally Happened

Sheep numbers on farms on January 1, 1980, totaled 12.5 million head, up 2 percent from the record low (12.2 million head) of January 1979. This was the first increase in sheep numbers since 1960.

During the 19 years of decline, numbers fell by 63 percent. Due to sharply reduced production, lamb prices increased during most of the 1970's.

Per-capita consumption of lamb dropped to 1.6 pound in 1979, while the average retail price of lamb was $2.46 per pound.

Ouch

With hogs selling at less than $30 per hundredweight, all producers are hurting.

Basically producers are sending a $20 bill along with each hog that goes to market. That is about how much cash costs are not covered at current market prices.

Prices have been low since the year began, but they really fell apart after the release of the pig crop report in late March.

While producers indicated in December that they would not increase farrowings in the December-February period, they did in fact increase farrowings by 3 percent. With the mild winter, producers saved 7.17 pigs per sow. The result was a pig crop 7.5 percent larger than that of a year earlier.

This insures a very large hog slaughter for the rest of 1980, but the magnitude of increase over a year earlier will drop as the year progresses. Slaughter in the first quarter was 21 percent above the high levels of January-March of 1979. Slaughter in the second quarter will probably increase 11 percent and third-quarter slaughter will increase about 6 percent when compared with the same periods in 1979.

The sluggish economy, large cold-storage holdings of pork, and large supplies of poultry will prevent prices from increasing substantially during 1980. Prices may return to near $40 for the seasonal peak in July, but producers can expect hog prices to average only in the mid to upper $30's for the second half of the year.

Meat Consumption

Meat consumption on a per-capita basis in 1980 will be up about 4 pounds from 1979 and near the record of 1976 and 1977. Lower-priced pork and poultry are being substituted for beef by economy-minded consumers.

In 1979, the average per pound retail price was $2.26 for beef and $1.44 for pork. The difference will be even greater in 1980. In February 1980, the average retail price of beef was $2.34 and $1.33 for pork.

A differential of $1.01 per pound can be a powerful influence on buyer habits.

HEAVY RAINS MEANS HARD, CRUSTY GROUND

How Will Your Corn Grow Through This?

WHAT YOU NEED IS A M&W ROTARY HOE

FROM BINKLEY & HURST BROS.

MODEL 1815

Perfect for the average size farm, the model 1815 Rotary Hoe is 184" wide to accommodate 4-40" rows or 6-30" rows. Fifty-two wheels, each mounted on its own arm, stay on the ground. The standard 3-point hitch and parking stand makes attachment a quick, easy job A safety screen protects the operator from flying dirt The rugged 4" square tubing frame and one piece cast arms are designed for years of service. Gangs can be raised for row crop skip

MODEL 1815 IN STOCK **$1992.00**

NEW WESTGO 4 ROW, 3 PT. HITCH DANISH TINE CULTIVATOR
Set Up **$1285.00**

SIMPLE IS BETTER

IH 1190 MOWER CONDITIONER IS SIMPLE & EASY

★★★ Header-mounted conditioner rolls crush & crimp to save leaves, promote fast drying.

★★★ "Over-The-Top" frame design allows an unrestricted hay flow.

★★★ Patented roll separation lets you clear slugs without leaving the tractor.

★★★ Adjustable 44" diameter reel feeds crop gently to the conditioning rolls.

★★★ Every drive component is fully accessable for easy servicing.

NEW IDEA FARM EQUIPMENT · BUSH-HOG · ONTARIO

J I Case Needs a Few New Dealers

We are looking for enterprising businessmen who understand agricultural equipment retailing "We" being the J I Case Company Founded in 1842, Case now has over 3 000 dealers world-wide and an unsurpassed reputation for product quality, reliability and current growth

If you think that the farm equipment business requires involvement with many different product lines you'll find Case an interesting exception As a Case Tractor Specialist you con centrate on one major product line, agricultural tractors and related tillage tools, because Case builds nothing but tractors for the farm market

Case Dealers sell twelve basic tractors 43 to 300 horsepower Five models are under 90 horsepower, four are the exciting new 90 series 108 to 180 horsepower and our three big four wheel drive tractors lead the booming 4WD market

High potential marketing areas are available now Profitable Case light construction and outdoor power equipment contracts may also be available As a Case Tractor Specialist, you would benefit from liberal financing policies, attractive consumer terms and time-proven Case Rental Systems

Case produce and policy advantages, when combined with your own aggressive sales and management abilities, will afford you the opportunity to realize an excellent return on your investment

YORKSHIRE SERVICE BOARS
15 September Boars $225 & UP

Our boars have proven they are high in economic values. Our SPARTAN boar received the sire of the year award. Our KICK boar produced the most efficient pen of purebred hogs, spring test (1976) 2.96 lbs. feed per/lb. gain. 1979 our HUSTLE boar sired the highest indexing boar, highest indexing pen of Yorkshire, the highest selling, the leanest, most efficient pen of Yorkshires (2.63 per lb gain), the soundest pen with an average score of 7.4 and had an average daily gain of 1.92. These pigs were all put on feed as small pigs and were in competition with hogs of all other breeds.

FARM & HOME REAL ESTATE
Smoketown, Pa.

Experience has proven again and again there is much more to selling or buying a farm than just saying yes when the man asks you. There are, of course, financial details, but don't forget, the emotional and physical details too. These are **important** and if not considered carefully, can cause problems later.

We at Farm & Home Real Estate recognize this and want to assure you of professional help in all 3 categories.

We have many rural and farm properties in the Central PA area and also members of the Multi-list service of the Lancaster area. This means greater exposure for you when you list with us.

Try us you'll like us
— many others have!

BUYING A TRACTOR...OR SELLING A FARM...

both have more in common than first meets the eye When you are purchasing farm equipment, you compare various makes and models, as well as the service of the dealer and the reliability of the manufacturer to make certain that you are getting the most value for your dollar. Likewise, when selling a farm, you want to make certain that you are getting the most value for the commission dollars you are spending. AT KISSINGER, LEONARD & ASSOCIATES Farm and Land Department, we invite you to compare the complete line of services provided including a comprehensive advertising program and full time sales associates who sell only farms and land and are thoroughly knowledgeable with the most modern farming practices and agricultural lending requirements There is a difference! If you would like more information without any obligation, please call any of the Farm and Land Department Sales Associates listed below.

Owner: Owen Martin, Hagerstown, MD

JET STREAM ties together many desirable qualifications - a strong pedigree, an outstanding predicted difference, and an exceptional type transmitting pattern

JET STREAM daughters have real dairy quality with flat, clean bone and well-attached, high quality udders Look for him to be an improver of center support, teat size and shape, and fore and rear udders

His flatbone characteristics set to the leg, width of rump and width of pelvic and thigh area along with his dairy strength makes him a fine mating for ELEVATION and ASTRONAUT daughters A cross that should produce outstanding results

JET STREAM's second crop daughters are outstanding The number of daughters in his production proof now totals 4208 and his daughters classified more than tripled The dairymen milking **JET STREAM's** are very pleased with some two-year-olds milking over 90 lbs of milk per day You can see why they are using him, again! You should too!

JET STREAM semen is available from your NEBA-Sire power professionals. Contact them today. Phone 717-836-3168 or 717-836-3127.

Soak that label, stomp that carton — refunding's become a local mania

BY SUSAN KAUFFMAN
Staff Correspondent

What is it that has taken hold of sensible homemakers' minds and energies and turned their thoughts to trash? Why do some respectible ladies, when they see an empty detergent box lying on top of a trash pile, feel waves of emotion overtake them to urge them, to tempt them almost to the breaking point, to retrieve someone else's discarded carton? Why is it that in some homes the Easter Bunny brought certain kinds of chewing gum the wrappers of which have already been removed? Why have some seldom-used mailboxes suddenly become stuffed week after week with postcards and letters?

All of the above mentioned symptoms are part of a growing national consumer movement called refunding. For some time, shoppers have been using coupons entitling them to reduced prices for products at the store at the time of purchase. But there is a second, more complicated and more time consuming, step in the ongoing progress to help cut costs called refunding.

Refunding is the process by which a manufacturer will send cash or coupons to a consumer after the consumer has proven purchase for particular items. At first the refunding programs where relatively simple. With the increasing popularity of the program, however, qualifications and specific details have become more and more demanding. Refunding is a means by which companies share their advertising monies with the consumer. They ask in return that the consumer try their product. To show that the consumer has tried the product, the companies ask that certain portions of the packaging or certain information be sent to a specified address. Generally, a specific form also has to accompany the proof of purchase by a certain date.

Refunding requires a good deal of organization on a large scale operation which could result in a homemaker buying practically everything at reduced prices. The whole process from selecting what to purchase each week at which stores, saving forms, coupons and proof of purchase items such as labels, box tops, box bottoms or ingredient panels and putting all the requirements together and into the mail takes planning and time, but to many a homemaker it has become a fascinating and rewarding challenge.

To aid the individual shopper in her quest for the best possible number of refunds coming her way, individuals have joined together in small groups and formed clubs. A recently organized refunding club held a meeting this past month near Quarryville, Lancaster County. Many of the members or prospective members were not totally informed about refunding and had invited an editor of a refunding newsletter, Janet Scotten, from Leola, to explain more details involved in refunding.

Mrs. Scotten, an operating room nurse at a Lancaster hospital, has been involved individually in refunding for some time and has only recently begun her publication of existing refunding offers. One paragraph of her introductory remarks highlights what refunding is all about.

"Be BOLD! BOUNCE around the store and be GLAD to try new products. GLORY, it pays to FLICKER around the HALLS of the store and HUNT'S for HYGRADE national brand products. The companies will CHEER and TICKLE you with a CARNATION or some ROYAL reward." Later she adds in her statement, "I can't PROMISE INSTAMATIC SUCCESS but if you do a TOP JOB you can save a BIG BATCH and PAMPER yourself."

Most refunders advise using a separate savings account so that one can actually see the amount of return she is getting. Since the refunds are usually in small amounts at a time, Mrs. Scotten warned that if the checks are spent as quickly as they come back, one would lose perspective of the total. If the refunds are deposited in an account, the growing sum can be surprising.

Once a shopper has made up her mind to start refunding seriously, she can be encouraged by the rewards coming her way. These rewards can be in several forms. A cash refund, a free coupon for a product, coupon for a certain amount of money off the purchase price of a product or a free gift are the usual rewards.

Refunds are good for brand name products only. A store brand may have a lower purchase price, but after refunding for a national brand name product, the brand name may prove to be the best buy, Mrs. Scotten explained. Using coupons at stores which honor double cents off increases the amount saved even more.

Often refunders will stock up on non-perishable items such as paper products and canned goods when there is a particularly good savings at the time of purchase. Then they remove the refunding proof of purchase qualifiers, process them with the required form and mail them in to the clearing house for the refund. Other refunders buy items one or two at a time, save the qualifiers as they go along, then send in the form and qualifiers before the expiration date of that particular refunding offer passes.

Immediately it becomes apparent that organization plays a big role in refunding. Cents off coupons, forms, proof of purchase qualifiers, cash register tapes, envelopes and postage all have to be filed and readily available when refunding. Many refunders have litterally boxes and boxes of coupons, forms and collections of labels, cartons, box tops, pull tapes from frozen juice cans and whatever else the manufacturer may require.

Mrs. Scotten flattens all her cartons then presses them under her son's lifting weights so that the cartons will fit into a filing box taking up much less room. She organizes her coupons and forms by expiration dates, her labels and Universal Products Codes by alphabetical order of the name of the product, to make it easier for her to collect the separate pieces of each particular refunding offer.

Refunders warn new-comers to start organizing their "trash" early, otherwise they may wait until they have several boxes full of cartons and box tops to handle all at once and then end up being discouraged. Several local refunders say they do this endless task of sorting and filing while watching television or while waiting for a load of wash to finish thereby putting their time to double use.

Homestead Notes

If by this time, you've decided refunding is not for your household — you don't use name brands or your family has particular tastes, that you do not use packaged, prepared foods much or do not have the time for such nonsense, you might consider testimonials given at the refunding club. One homemaker said she used double cents off coupons the week before for the first time in her life and had the checker return to her $14 in cash. Another lady said she sends an average of seven or eight letters off each week worth $10 to $30 each week.

Janet Scotten, editor of Trash Is Cash, Leola, explaining details of refunding to group in Southern Lancaster County.

Others nation-wide save up for vacations or with remodeling projects in mind. But Mrs. Scotten warns that the picture often depicted of a refunder going to the store, filling a shopping cart and only paying out a sum less than a couple of dollars is unrealistic. "If you saved up all your free coupons, went with double cents off coupons and selected only certain products this could be possible once in a great while," she clarified. Usually the refunder can save less dramatic sums. But doing so consistently over a longer period of time, the total is still rewarding.

"Many people ask me how much I spend to get a refund," Mrs. Scotten said. "I never buy a product I won't use just to get a refund, but if I need paper towels I will use the cents off coupons that I have cut from the newspaper for a national brand and stock up when they are on sale. Sooner or later there will be a refund offer on them. I've heard people say they don't cook for a large family so they wouldn't be able to send for many refunds. There are refunds on products that almost everyone uses — shampoos, deodorants, toothpaste, batteries, pain relievers, light bulbs, even diapers, dog and cat foods."

Mrs. Scotten gave some tips on getting started refunding. "To get a refund from a company you need to send a form or write a note if a form is not required plus send along some qualifier. "You can find forms on supermarket shelves on specially marked packages and on tags hanging on bottles. "Forms can also be found in newspapers and magazines. They can be exchanged, not sold, in clubs, round robin groups which are a closed group who share by way of mailing or by answering ads in the classified sections of the newspaper."

She went on to explain that whatever the company requests for a particular refund—the box top, box bottom, front or back label, Proof of purchase seal, the UPC (Universal Product Code, all those lines with numbers underneath), net weight statement, the ingredient panel, the entire box or the cardboard backing needs to be saved. Often the qualifier is the part you usually throw away when you open the product, such as the tear off strip on boxes or frozen juice cans, or the inner seal on a jar of instant coffee or tea. What may be the qualifier today may not be a qualifier in another refund offer months from now so save everything, she advised. "Cut labels from soup cans, soak labels from jars and plastic bottles and flatten boxes."

"Most refunders use the simplest method, putting them in alphabetical order in cartons for the large items and expanding folders or large envelopes for the smaller items." Also save all register tapes. If you need to circle the purchase price of an item it is not necessary to send the entire tape unless the form requires it. Sometimes you may just need to tract a name on a plastic container that has no removable seal or label. You may need a weight and price sticker from a meat or bakery products or a wrapper from a package of hot dog buns. "When I get a qualifier I clip it to the necessary form and keep it in a separate box," she added. "Read the form carefully and be sure to send exactly the qualifiers requested. Be patient, most forms advise you to allow at least six weeks before expecting the refund. The money you make is up to you. The more refunds you send, the more checks you will receive and remember that your trash is cash," she concluded.

Samples of qualifiers people collect are left to right: tear strip from fabric softener, spray can plastic cap (usually asked to cut out triangular shaped piece to send in with form), UPC symbol on bottom of cake mix box, cereal box back with cents off coupons and refunding form, tuna can label and circled cash register tape.

Junior Cooking Edition

When the weather is rainy and there's nothing to do, or when the day is sunny and the family chores take up lots of mom's time, why not encourage your junior to experiment with one of the recipes shared here today. Family meals are made more interesting, and there's a special feeling of pride when a junior cooks something special

DELICIOUS FUDGE

4 cups white sugar
1 teaspoon vinegar
2 tablespoons corn syrup
2 squares chocolate or 2 tablespoons cocoa
1 cup evaporated milk
1 pint marshmallow creme
1 pint peanut butter
1 teaspoon vanilla

Combine sugar, vinegar, corn syrup, chocolate and evaporated milk. Cook to a rolling boil and boil 3 minutes. Remove from heat, add marshmallow creme and peanut butter. Spread in a buttered pan. Cool and cut in squares.

Gwen Eberly, Age 10, New Holland

MINTS

1 pound confectioners sugar
¼ pound melted butter
a little milk
a few drops of spearmint flavor
food coloring if desired

Mix the sugar, butter, flavor and coloring in a bowl and add enough milk to make a dough. Roll the dough into balls and flatten with the bottom of a glass.

Gwen Eberly, Age 10, New Holland

ICE CREAM DESSERT

60 Hi-Ho crackers, crushed fine
½ cup butter or margarine, melted
1½ cups milk
2 packages instant vanilla pudding or any flavor
2 quarts vanilla ice cream (softened)

Mix crackers and melted butter. Line a dish or pan. Add pudding to milk. Beat 2 minutes. Let set a few minutes. Add ice cream to pudding and beat. Mix well. Pour into prepared dishes. This may also be frozen.

Judy R. Burkholder, Age 10, East Earl

CHEESE CAKE

1 small box lemon gelatin
2 packs graham crackers
½ cup melted butter
½ cup sugar
1 can evaporated milk
1 cup confectioners sugar
1 8-ounce package cream cheese

Make gelatin as directed. Crush the graham crackers and add the melted butter and sugar. Mix and pack into an oblong cake pan, except about ½ cup of the mixture to be used as topping When the gelatin starts to set, whip the milk and add the confectioners sugar and cream cheese. Mix with the gelatin and pour into the graham crust. Sprinkle the remainder of the graham mixture on top and chill.

Naomi Zook, Lebanon

ORANGE TAPIOCA

4 cups water
1 cup sugar
½ cup minute tapioca
1 6-ounce can frozen orange juice.

Bring water, sugar and tapioca to a boil. Take off heat and add juice. Stir together and let cool Garnish with orange slices.

Miriam Zook, Lebanon

Recipe Swap

Whether you're cooking for 5 or 500, the barbecue sauce recipe we've received from Genevieve Voneida will help you turn out perfect barbecued chicken. In addition, we have a luscious recipe for Black Magic Cake that would be the perfect dessert for a chicken barbecue. Why not try both the next time the weather's warm and sunny and it's just too nice to stay indoors.

BARBECUE SAUCE

No. of People	5	10	50	500
Water	½ cup	½ pt.	1 qt.	2½ gal.
Vinegar	1 cup	1 pt.	2 qts.	5 gal.
Butter	¼ lb.	½ lb.	2 lb.	20 lb.
Salt	Dash	1 oz.	¼ lb.	2½ lb.

Genevieve M. Voneida, Muncy

BLACK MAGIC CAKE

2 cups all purpose flour
2 cups sugar
¾ cup cocoa
2 teaspoons baking soda
1 teaspoon baking powder
½ teaspoon salt
2 eggs
1 cup black coffee
1 cup milk
½ cup salad oil
2 teaspoons vanilla

Preheat oven to 350° F. Sift all dry ingredients together into a large bowl. Add the eggs and liquids and stir until the batter is smooth (batter will be thin). Pour into a well greased 9x13 inch baking pan. Bake 35 minutes or until done. Cool in a pan. Top with buttercream frosting or your family's favorite frosting.

Mrs. Harold E. Moyer Sr., Robesonia

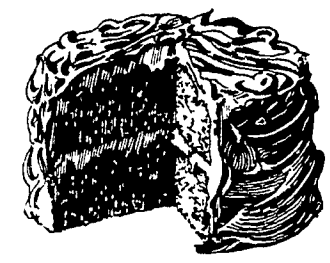
Home On The Range



Let the wholesomeness of whole grain help you survive the grind

The water sloshes over the water wheel as the huge wheel turns the cogs, and belts slap slap as they transfer power from the water to the grindstones. The stones whir as the grain filters from the grain bins overhead, through the stones and to the floor beneath where it is bagged as whole grain flour.

This scene while commonplace not a century ago has been all but lost today in the scurry of supermarket carts through aisles of refined flour. But occasionally the country cook likes to add the flavor and rich aroma of whole grain baking to her table, and some families are using more whole grains for the healthful simplicity they offer. So on today's page we're featuring whole grain recipes to try and enjoy.

RHUBARB SHORTCAKE

1½ cups shortening
¾ cup sugar
1 egg
½ cup milk
1½ cups sifted flour (1 cup of whole wheat flour and ½ cup of refined flour may be substituted)
¼ teaspoon salt
¼ teaspoon soda
¾ teaspoon baking powder
¼ cup chopped nuts

Cover rhubarb with boiling water. Let stand 5 minutes, drain. Cream shortening and sugar, add egg and beat well. Sift dry ingredients and add alternately with milk. Fold in rhubarb and nuts. Bake in an 8-inch greased square pan at 350° F. for about 40 minutes. Serve warm with rhubarb sauce or milk.

Rhubarb Sauce

Cover 1½ cups of rhubarb with water and bring to a boil. Add ½ cup sugar and 1 tablespoon flour. Cook until thick, stirring constantly Add ½ tablespoon butter.

Mrs. Warren S. Martin, Ephrata

RALSTON BLACK BREAD

3 cups Ralston instant cereal
4 cups flour
2 tablespoons sugar
3 teaspoons soda
1 teaspoon salt
4 cups water
1 cup molasses
1 cup floured raisins (optional)

Mix ingredients and pour into greased loaf pans. Bake 2½-3 hours at 250° F. Store any not used immediately in the refrigerator in a plastic bag

Kay Chapman, Benton

Mass marketing and whole grains usually do not go hand in hand. Many whole grain cooks buy their flour at local mills or self-service facilities.

RYE SQUARES

1 cup rye flour
1 cup rolled oats
2 cups chopped nuts
1 teaspoon baking powder
1 teaspoon salt
4 eggs
1 cup honey
½ cup oil
1 teaspoon vanilla

Combine the first five ingredients. In a separate bowl, beat the eggs and add the honey, oil and vanilla. Mix thoroughly. Add the wet mixture to the dry mixture and stir well. Pour into a well greased pan and bake at 350° F. for 30 minutes Cool and cut into squares

Martha Smucker, Lancaster

CREATE-A-WHOLEGRAIN MUFFINS

¾ cup milk
¾ cup bran cereal
1 egg
¼ cup vegetable oil
1 egg
¼ cup molasses or honey
¼ cup firmly packed brown sugar
1 cup Quaker Oats
⅔ cup all purpose flour
1 tablespoon baking powder
¼ teaspoon salt, if desired

Combine milk and bran cereal in medium-sized bowl Add egg, oil, molasses and brown sugar mix well Add combined remaining ingredients, mixing just until dry ingredients are moistened Fill 12 greased or paper-lined medium-sized muffin cups 2/3 full Bkae in preheated 400°F oven about 15 minutes Makes 1 dozen muffins

Create your muffins using this basic recipe, and then try your own For a dinner muffin, use leftover cooked corn Or substitute chocolate milk for whole milk for a flavor twist Other variations to try substitute ¾ cup unprocessed bran for bran cereal; substitute ¼ cup light or dark corn syrup for molasses, add ½ cup raisins, blueberries, chopped dates, apple or nuts; or sprinkle batter in muffin cups with cinnamon or peanuts

PUMPKIN NUT BREAD

1 cup all-purpose flour
2 cups whole wheat flour
1 teaspoon salt
1 teaspoon baking powder
1 teaspoon baking soda
½ teaspoon cinnamon
½ teaspoon ginger
½ teaspoon nutmeg
4 eggs
2 cups sugar
2 cups strained pumpkin
1¼ cups melted butter
1 cup chopped nuts

Preheat oven to 350° F. Sift dry ingredients together 2 times. Beat eggs until thick, adding sugar gradually as you beat. Stir in the pumpkin, then the melted butter. Beat in dry ingredients and mix well. Fold in the nuts. Pour into 2 buttered and floured bread pans Bake 1 hour or until a toothpick comes out clean. Makes 2 loaves.

Mrs. Carl S. Bacon

WHOLEGRAIN CRUNCH COOKIES

¾ cup butter or margarine
1 cup firmly packed brown sugar
½ cup granulated sugar
1 egg
¼ cup milk
1 teaspoon vanilla
1 cup all-purpose flour
½ teaspoon salt
½ teaspoon soda
2½ cups Quaker Oats
¾ cup wheat germ
½ cup chopped nuts

Beat the butter, sugars, egg, milk and vanilla together. Add the combined flour, salt and soda; mix well Stir in oats, wheat germ and nuts. Drop by rounded teaspoonfuls onto greased cookie sheet. Bake in preheated 375° F. oven 10 to 12 minutes or until lightly golden brown. Makes about 4½ dozen cookies.

Variations: Substitute 1 cup unprocessed bran or bran cereal for wheat germ; substitute ½ cup sunflower seeds for nuts and add ½ cup raisins; substitute 1 cup raisins for nuts; substitute ½ cup shredded or flaked coconut for nuts; or add ½ cup chopped dates, dried apricots or prunes.

Janet Gehman, New Holland

WANTED: RECIPES!

JUNE DAIRY MONTH

In June, Lancaster Farming will feature dairy recipes for the entire month. Here is your chance, whether or not you are actively involved in dairying to send in your favorite recipe using milk, cheese, or any other dairy product.

Home on the Range is your recipe column and we need your recipes to fill it. Only three weeks remain before the close of the first dairy recipe issue, so don't delay, mail that family recipe today. Deadlines for dairy month will be May 31 - June 21.

Special gifts have been chosen for each person whose dairy recipe we use It's our way of saying thank you to you and to the dairy industry Your small amount of time will be well rewarded

Send your recipe to Home on the Range, Lancaster Farming, Box 366, Lititz, PA 17543 Don't forget to include your name, and complete address.

Reminder Memorial Day Cookout Recipes Deadline is May 17

HONEY BROOK MOLASSES

• BAKING MOLASSES • TABLE SYRUP
• BLACKSTRAP MOLASSES
• CLIP & SAVE FOR YOUR RECIPE FILES:

PEANUT BRITTLE

2 tbsp butter
1 cup sugar
½ cup Honey Brook Baking Molasses
¾ tsp Baking Soda
2 cups roasted peanuts

Melt butter in saucepan Add sugar and Honey Brook Baking Molasses Mix well Cook over medium heat, stirring frequently, to 300° or until syrup, when dropped in very cold water, becomes brittle Remove from heat Stir in soda Quickly add peanuts Pour into 2 large, greased cookie pans Lift edges and stretch candy as thin as possible when cool enough to handle. Break into pieces. Makes 1¼ pounds.

On being a farm wife - And other hazards

Joyce Bupp

Disking is for daydreamers. And since I can very easily slip into a daydreaming state, disking falls among my top-ranked farm jobs.

What's especially neat about running the disk is that it makes you feel that you've really accomplished something without concentrating all that much mental or physical effort.

Just climb up onto the tractor seat, pushbutton the horsepower into roaring sound, throw'er into gear, throttle up, hit the hydraulic lever to lower the blades — and away we go!

Behind the rotating, clanking rows of sharp steel circles, soil turns over dark brown, rich and moist. Its wholesome, earthy fragrance blends with the pungent bouquet of diesel fumes, recently-spread manure and just a light lingering whiff of the clump of garlic I hit back along the fence row.

Early evening, both the farmer and I agree, is our favorite time for field work. Overhead, the amphitheater of Heaven is a crystal clear deepening blue. Off in the distant western sky, a few tiny cloud puffs glow golden, then orange, fading to pink and into a majestic lavendar, as the sun beds down behind the horizon

Contour strips undulate across the hill, the heads in the barley fields changing from a sunwashed chartreuse to more solemn nighttime garb of kelly green. Dampness suddenly weighs and cools the air, collecting in the lower curves of the field and chilling fingers and ears in the hurry to finish a few last trips around.

In the gathering dusk, a parade of black and white heifers troop single file up through the adjoining meadow, arriving with clock-like timing each night for their evening rations of forage and grains. Gathering patiently before the closed gates, they group into small clusters, spending the interim in gossip of sweet clover and errant fence jumpers

Darkness hurries now as the last uneven corner of soil is turned Heat from the throbbing engine flows back across the tractor hood and warms my cheeks Lights in the milking parlor are warm and welcoming, with their cheerful yellow glow out beyond the house. Fritz, having trotted beside the equipment all evening long in ever-loyal dog companionship, pants with tired legs and drooping tongue.

Ears ring with the sudden silence when the motor dies and the noisy train is stilled at the end of the field Another bit of Spring work is complete. And for now, daydreaming time must come to an end

Camden County holds 4-H public presentation event

CLEMENTON, N.J. — Camden County 4-H'ers talked their way through the annual public presentation event held at Overbrook Junior High School.

The 4-H'ers planned a presentation from one of these categories: speech, dramatics, demonstrations or illustrated talk. Ribbon scores were given to each participant.

The public presentations are an opportunity for 4-H'ers to gain poise in front of groups, while learning the correct components of forensics. Judges for this event were Linda Hanna, Donna MacNeir, Helen Andress, Claire Eagan and Eleanor Gillfillan.

4-H'ers who participated and received excellent ratings were Jaelyn Rearick, Kelly Galloway, Emily Lines, Laurie Feller, Jessie Miller, Kelly Behrens, all of Cherry Hill; Lisa Post and Terry Gilson of Collingswood, Margaretann Ewan, Jim Ewan, and Alexandra Ewan of Cedar Brook; Karen Valvardi, Erial; Karen Paolello, Bill Paolello, Carol Paolello of Blue Anchor; and Donna Spreng, Chews Landing.

Receiving very good ratings were Sandy Trotter, Collingswood, and Harold Ewan, of Cedar Brook. Joyce Paolello received a citation in the prep division.

Those 4-H'ers who are at least 14 years of age and received an excellent rating will represent Camden County at the state presentations held at Cook College, Thursday, June 26. Representing Camden County will be Jaelyn Rearick, Alexandra Ewan, Karen Valvardi and Donna Spreng.

Ida's Notebook

Ida Risser

My family has several birthdays in the month of May.

As you read this my mother will just have reached her 85th birthday. She recently moved to a retirement community and we are endeavoring to empty her large house.

In attempting to comply with her wishes and not have sale, we are now in the process of turning six more houses into ones that are as crowded as her home was. Some things we find are pleasant surprises, some are gruesome and some are interesting.

One such item was a black stationery folder, badly battered, which held a few letters from a soldier in the Civil War. The letters would probably mean even more to a member of this boy's family-McIntyre descendents

It appears that when Franklin McIntyre wrote home from Plymouth, North Carolina to his mother, his main concern was to urge his family to write to him and to find out where his brother Samuel was stationed. He talks of standing picket duty and the shooting the "rebs" like he did rabbits in the fields of home. He tells his mother not to worry as he is a brave boy and mentions that he was in the hospital with the measles

There is a brother Enos Diller McIntyre and he feels two from one family is enough in the war In his letter dated April 6, 1864 he stresses to his mother that he doesn't drink whiskey and that he has plenty of soft bread and fresh beef to eat.

There is also a newspaper clipping with the letters which states that William Weidler McIntyre died Feb. 16, 1876 aged 15 years, 5 months and 12 days.

Considering the present unrest in our world, such letters certainly give us reason to pause and pray for peace

Limousin sale nets over $100 grand

COLUMBUS, Oh. — A total of $105,160 rolled in for the 98 lots sold at the Eastern Limousin Breeders Assoc Spring sale, held Saturday, May 3

Buyers from nine states helped push the sale average up to $1073.

Steven Linkinogger of Tariff, W.V., bought the top seling bull, Nordic Kelsey XIM 38K for $3400. This fullblood bull was a July 1978 son of Essor and consigned by Nordic Farms LTD, Campbellville, Ontario.

Nordic Farms also had the second highest selling bull at $3350. It was an April 1979 fullblood son of Golden Rod and was purchased by Walnut Hill Farm, Charleston, W.V.

A total of 16 purebred bulls averaged $2094

Indian Trail Farm, Trail, Oh., purchased the top selling purebred cow for $3000. She was a March 1976 daughter of K&D Beau Everest KDS 2E and had a Gendarme bull calf at side.

Gordon Briggs of Gambier, Oh., had the top selling open purebred female. This December 1978 daughter of Espoir sold to Don Faidley, Colfax, IA for $1125.

The 29 open purebred heifers averaged $888. Seven bred 75% heifers averged $750. Thirteen open percentage heifers averaged $595.

Fawley Farms, Lynchburg, Oh., had the top selling percentage bull. He was a Marc 1978 son of Bold Type and sold to C.H. Birney of Jewett, Oh. for $1410.

The 22 percentage bulls averaged $762 Many of these bulls were eleven and twelve months old.

Farm Women Societies

Lancaster Co. Society 1

Lancaster County Society 1 met at the Brunnerville Fire Hall for the Mother-Daughter Banquet.

Sarah Brubaker sang three solos. Two from the Sound of Music and one hymn. Amy Fyock gave a recitation-"Slow Poke" about a turtle. Barbara Moore gave "Memories of YesterYear". Special music was sung by members of Society 1. Nancy Noll sang a song that she composed "I Thank My God For Mother."

Ann Shreiner gave a slide presentation accompanied by music and prayer. The meeting was closed by the whole group singing the theme song, "Brighten The Corner Where You Are."

The next meeting will be held Saturday, June 28. It will be a family picnic held at Donegal Mills Plantation.

Lancaster Co. Society 13

Lancaster Society 13 met in May at the home of Laura Denlinger with Ethel Landis and Dorothy Landis as co-hostesses.

Roll call was answered by telling your favorite rose. Mrs. Denlinger showed slides of former Farm Women activities and homemaker's camp.

A contribution of $10 was given to Youth for Christ.

The next meeting will be held Friday, June 13, at Edie Gehman's, Ronks, with Dorothy Leaman as co-hostess.

Lancaster Co. Society 19

Lancaster Society 19 met in the home of Alta Miller, Den-Mil Road, recently. Elsie Huber assisted in serving refreshments as the members and guests arrived.

Yvonne Geib presented a devotional period reading from Timothy and Proverbs, and a poem entitled - Nobody Knows But Mother. Each member answered roll call by telling their maiden name

S. Jane Parker, Lancaster, who operates The Goodie Shoppe in her home, demonstrated the preparation and decoration of petit fours.

Contributions were approved to the American Heart Association, Dairy Princess Contest and YMCA. A trip to Duke Gardens was discussed and finalized for May 31.

Progress of the group's Advocate program was reported. The purpose of this activity is intended to bring happiness to another designated individual each month.

The next meeting is planned for Saturday, June 14 in the home of Lucetta Long.

York Co. Society 1

York Group 1 held its May meeting at the home of Mary Smith.

Roll call was answered by giving a remembrance of the club's recent trip and the name of a spring flower.

Martha Sloat entertained the group with readings of poems which she wrote. And Iva Craft displayed and described handmade afghans.

Michelle Rohrbach accompanied by Lisa Aldinger played two flute solos.

The next meeting will be held at the home of Ila Strong on Wednesday, June 4.

York Co. Society 35

York Group 35 met at the home of Lois Rohrbaugh recently.

A program on silk flower arranging was presented by Vicki Rohrbaugh.

The members of the group enjoyed a bus trip to the Williamsburg Pottery Outlet in Virginia recently. And the refreshment committee for the York Truck Rodeo, to be held in June at the York Fairgrounds, met to establish plans for the event.

The picnic committee for the group's entertaining made arrangements for the annual picnic.

The group's next meeting will be held at the home of Vicki Rohrbaugh, Thursday, May 22. The program will be on drying plants and flowers and each member should bring a garden plant for roll call exchange.

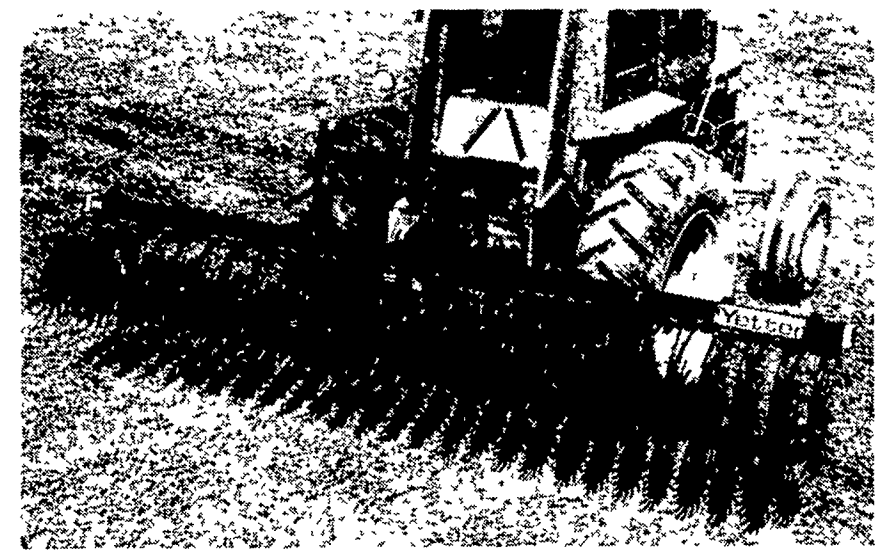
THE **Yetter**
TOOL BAR ROTARY HOE



THE YETTER 3400 SERIES ROTARY HOE IS ONE OF THE MOST FLEXIBLE AND VERSATILE ROTARY HOES ON THE MARKET TODAY!

—FEATURING—

■ **WHEEL AND BEARING ASSEMBLY** -Yetter's Rotary Hoe features 21" diameter wheels They are riveted for durability and turn on sealed ball bearings There are 16 rugged teeth per wheel Each spoon-billed tooth is hardened drop-forged, and self-sharpening

■ **SPRING-CUSHIONED ARM ASSEMBLY** - Independently spring-cushioned arms permit the 3400 to follow the contour of any field insuring rock and obstruction protection. Section mounting brackets are ¾ inch and designed to endure the most abusive field conditions

■ **ARM AND WHEEL ASSEMBLY** -Yetter engineers designed this hoe so there is only one wheel per arm, rather than two or more The result is greater flexibility and less stress on the arms Each arm is made of high strength ductile iron. Wheel spacing is 3½"

IF YOU ARE LOOKING FOR AN EFFICIENT HOE THAT FEATURES QUALITY AND RUGGED DURABILITY, THEN YOU WANT THIS YETTER 3400 SERIES ROTARY HOE

Know over-spending's six danger signals

UNIVERSITY PARK — At what point are you spending more than your income should allow? Or, when is it time to stop charging and start saving?

These are questions that you should be considering with every credit purchase you make. If you are not careful you may end up deep in debt without realizing until it is too late, says Marilyn Furry, family resource specialist at Penn State.

More and more families are using credit to keep up with inflation and this, says Furry, can lead over spending to the point where there isn't enough income to pay the bills. Each month becomes more difficult than the last. However, according to Furry, there are several warning signals that can avert financial disaster.

The National Foundation for Consumer Credit has listed six warning signs of impending credit disaster. Answer these six questions and rate your credit standing.

Do you charge small day-to-day expenditures, such as groceries and toiletries, because you don't have the money to pay for them?

Have you recently postponed paying a bill until next month due to lack of funds to cover it?

Do you have to borrow money to pay fixed expenses, such as quarterly tax payments, insurance premiums, even loan installments?

Are some of your telephone calls or letters from creditors demanding payment of overdue bills?

Do annual payments on long-term debts amount to more than 20 percent of your annual income?

Are you unable to say exactly how much money you owe on installment and other long-term debts?

If you answered no to all of these above questions, you are in good financial shape.

If you answered yes to two of the questions you have potential problems.

If more than three of your answers were yes, you are already in trouble.

If you are having financial difficulties, Furry advises you to work out a budget and stick to it. If you cannot make all of your payments in a given month contact some of your creditors and make other arrangements. Don't just skip some payments.

Finally, if you still find yourself in trouble you should consider some kind of financial counselling, she said.

The U.S. is the world's leading cheese producer. Output reached 1.7 million tons last year, according to the Department of Agriculture.

For the first time, U.S. cotton exports may exceed domestic use this year, predicts the Department of Agriculture.

Ex-Dairy Princess weds Lititz farmer

Twilla F. Brubaker, the daughter of Mr. and Mrs. Harold Brubaker, Manheim, and the 1977-78 Lancaster County Dairy Princess (second runner-up in the Pennsylvania Pageant) was married Saturday to H. Dale Rohrer, who is employed farming on the farm of his parents, Mr. and Mrs. Clinton F. Rohrer, Lititz. The ceremony took place at Erisman's Mennonite Church, Manheim. The couple will reside at 750 Doe Run Road, Lititz.

Ladies Have You Heard?

By Doris Thomas

Lancaster Extension Home Economist

STORE IT RIGHT

It's time for the seasonal switch of clothing and accessories. Simplify the task and go through closets and drawers room by room. Use one box to collect garments to be discarded or given away and another to hold items that need cleaning and repair.

Soil weakens fibers, so put everything away absolutely clean and dry.

Launder washables. Have non-washables dry cleaned Hang garments. Place in garment bags or plastic bags. Fold items to be boxed; pack with tissue in between to reduce wrinkling. Sprinkle moth crystals or use moth balls when storing woolens.

Label boxes with contents for easy access. Keep sweaters, jackets handy for the first chill of fall Store gloves, scarves, and hats together.

Wash boots, shoes and handbags made of synthetic materials with a sudsy sponge Rinse and dry. Use a special leather cleaner and polish on leather. Stuff boots, shoes and bags with paper to retain their shape. Store in boxes Old socks make good protective shoebags.

With closets and drawers empty, it's a good time to freshen them. Wash, paint if necessary and devise new space dividers. Reline drawers with paper or vinyl Now you're set to unpack and stock warm weather apparel and accessories

Involve Children in Energy Conservation

Energy conservation is not a "for adults only" activity Youngsters can do a lot to save energy, too. Parents can set the best example for their children by making some basic facts available to them and by practicing what they preach.

Water seems to hold a fascination for children. They tend to have a heavy hand on the faucet when getting a drink of water or when brushing their teeth.

Children can be taught to fill a glass with only as much as they intend to drink and to turn the water off when brushing their teeth. Teach youngsters to turn faucets off completely to avoid drips. If height is the problem, make or buy a stool so the children can reach the faucet adequately.

When it comes to bathing, a little water can go a long way with children. Small youngsters can take a tub bath together to save water.

Another energy weakness children are prone to is standing in front of an open refrigerator while deciding what to eat. This wastes electricity by causing the refrigerator to work harder, and if you have an old-style manual defrost refrigerator with the freezer inside the unit, it will cause ice to build up rapidly during the summer months.

Teach children to think about what they want before they open the door. If they don't know what they want, perhaps they aren't really hungry.

Be creative in thinking of ways to save energy in your home. If your children like cool drinks on hot summer days and perpetually head for the ice trays in the freezer, try filling an ice chest with enough cubes to last the day. You will save energy in your freezer and will be setting a good example for your children on how to conserve

You can cut down on the number of drinking glasses used in a day by marking each child's cup with his or her name. One cup per child each day can go a long way toward saving you or your dishwasher time and energy.

Be patient when trying to teach children energy conservation and keep in mind that you may serve as their most prominent example of how to conserve

Watch for danger signs of debt

YORK — Are you paying only the minimum amount due each month on your charge accounts? Or waiting longer and longer to pay bills?

These are just a few warning signs that you may be getting in over your head, says Joan Lamberson, home economist. Overuse of credit is like an illness that creeps up without your realizing what's happening.

Easy credit, combined with inflation, has made many families especially vulnerable. Now the credit situation is tightening, and many retailers are requiring larger minimum monthly payments, and lowering customers' credit limits.

Lamberson recommends that consumers be alert to danger signs of debt and take action. If you notice you are making minimum payments on charge accounts, discipline yourself to make larger installments. Don't make any more purchases until your account is paid up.

If you have accounts all over town, close as many as possible.

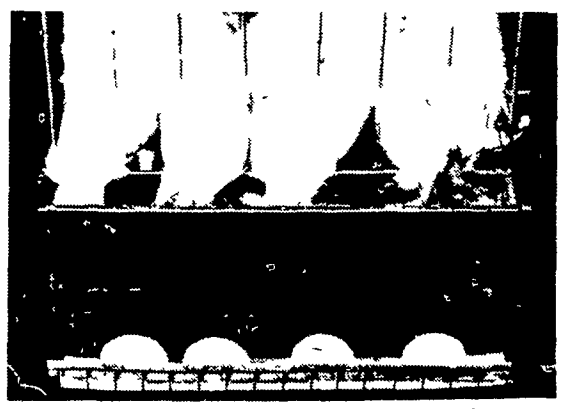
CHORE-TIME®

BUILT TO LAST!

LEADERS IN REVERSE CAGE RESEARCH & DEVELOPMENT

PYRAMID CHORE-TIME™

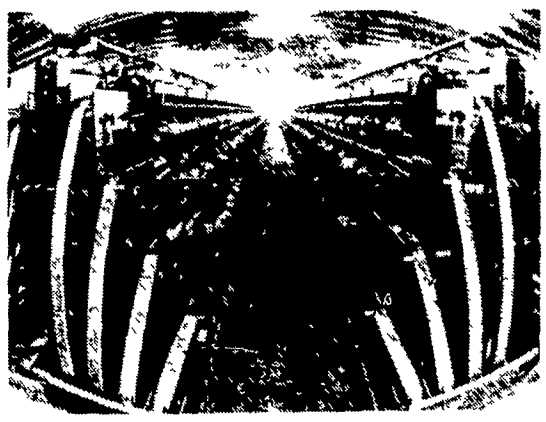
REVERSE CAGE LAYER SYSTEM



LESS BIRD STRESS

The system has been designed for bird **comfort!**

Each bird has her place at the feed trough Each has easy access to water Obstruction to light and the flow of air have been greatly reduced, providing more uniform ventilation and lighting for every bird Combined with Chore-Time's automatically controlled air inletting system, you get a layer house environment designed for bird comfort and the resulting better production



Not only the physical shape of the feed trough, but the operation of the feeder has been engineered to reduce feed waste The trough shape cuts down on feed loss from "raking" and "billing," while the feeder has been specifically designed for Chore-Time's programmed and performance feeding concept

★ LET US SHOW YOU A REVERSE CAGE SYSTEM IN OPERATION

The Air System With A Mind Of Its Own

Until now, most ventilation systems had one drawback. Air inlets had to be opened and closed by hand.

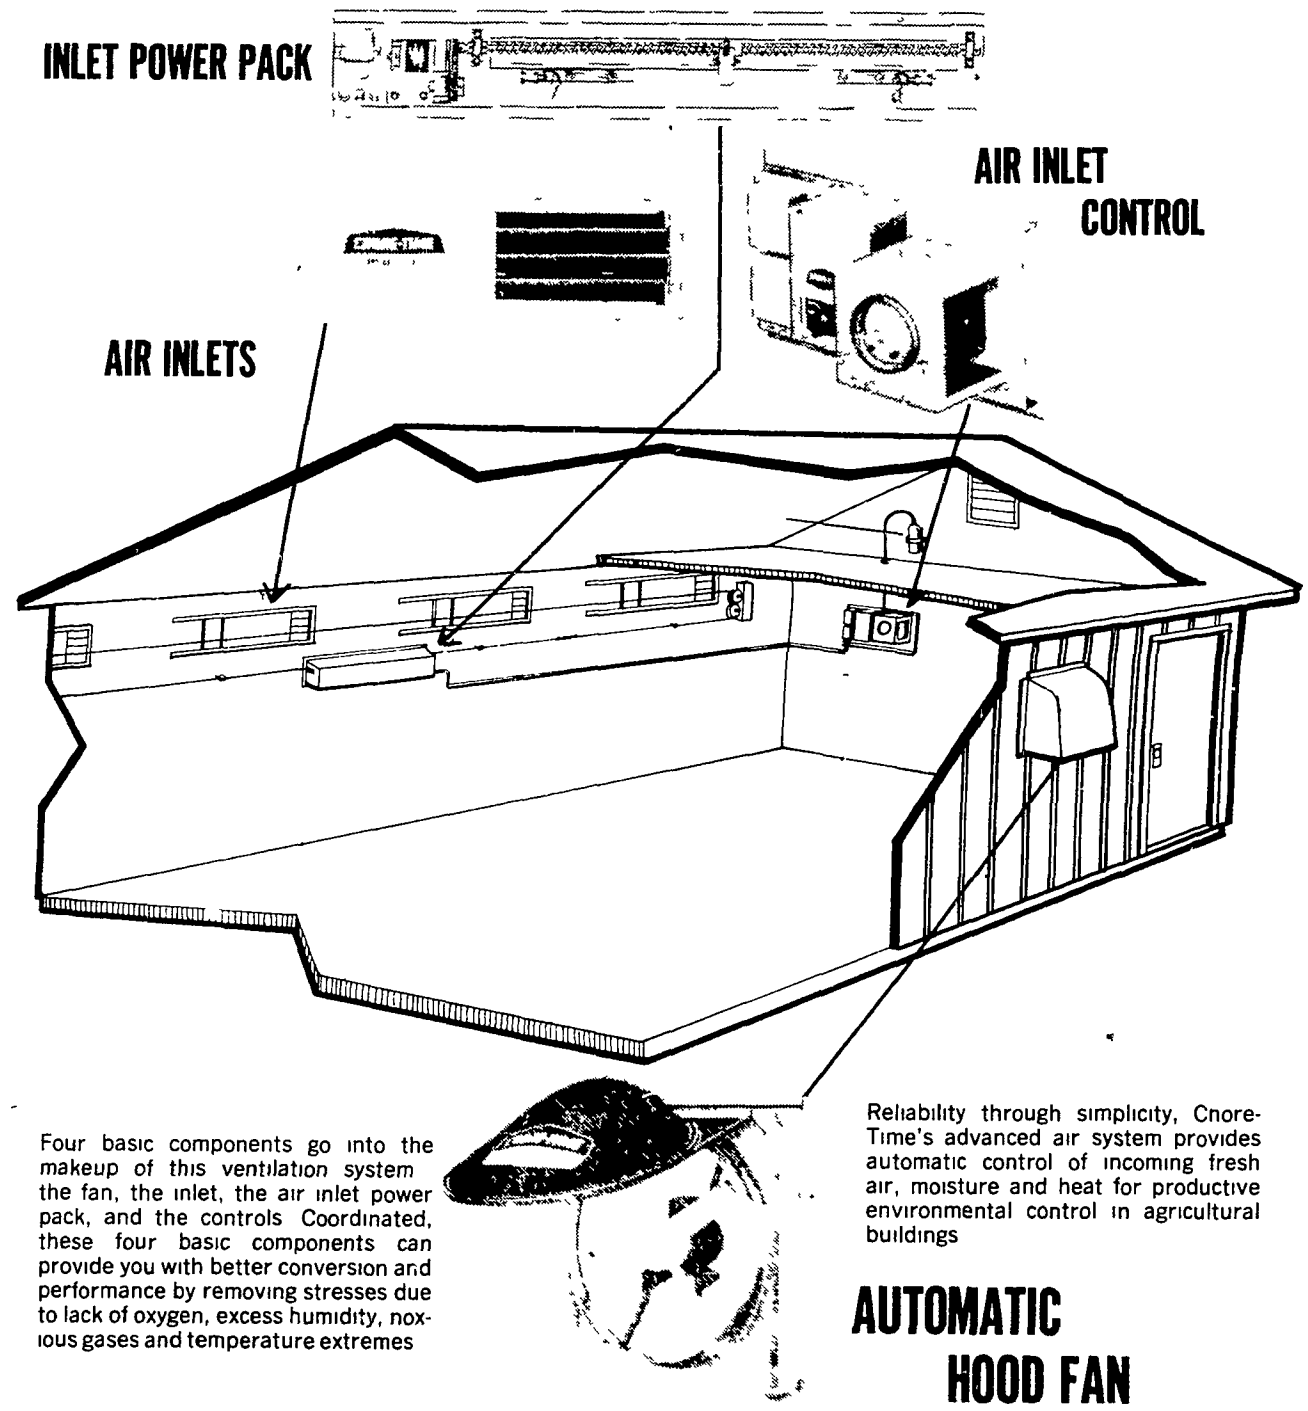
This was time consuming — and pretty much a matter of guesswork

Now, Chore-Time has eliminated this problem.

The Chore-Time system has a mind of its own and adjusts inlets — in conjunction with fan operation — to maintain air pressure at a constant, preset level.

This provides a degree of air and moisture accuracy never before possible in poultry and livestock buildings.

The new inlet control (pictured) is just one of many exclusive features that make Chore-Time air systems number one in performance and reliability



Four basic components go into the makeup of this ventilation system the fan, the inlet, the air inlet power pack, and the controls Coordinated, these four basic components can provide you with better conversion and performance by removing stresses due to lack of oxygen, excess humidity, noxious gases and temperature extremes

Reliability through simplicity, Chore-Time's advanced air system provides automatic control of incoming fresh air, moisture and heat for productive environmental control in agricultural buildings

Farm Talk

Jerry Webb

It's Spring, the time when young men's fancies normally turn to thoughts of love, or at least that's what the poets think.

Believe me, young farmers think about a lot more than that. Their thoughts are more apt to be on farmland and what they can grow on it.

In fact, they've been thinking about farmland for several months, doing what they can to line up the acres they need for a successful year. Farmers, young and old, have been bidding against each other over the past few months for much needed land that costs too much to buy and probably even too much to rent.

Those rumors heard in coffee shops and farm meetings this Spring about $100 an acre rentals are probably true. Around here that may seem like a lot of money, but in the Midwest that's actually cheap.

The latest survey of farmland rental rates, reported in Successful Farming magazine, is downright shocking. Throughout the Midwest, farmers are paying $100 and more per acre to rent corn and soybean ground.

The highest figure reported was a truly outrageous $180 an acre in Illinois. Granted, it's good land, but it's hard to see how that farmer will make ends meet in 1980.

Other samplings -- and these aren't just idle gossip, -- give reports from farm bankers ranging from as low as $50 an acre for dryland in Nebraska to $150 in Iowa and Illinois.

It's hard for me to see how a farmer can pay $150 to rent an acre of ground that will produce 135 bushels of corn that will sell at considerably less than $3 a bushel.

An Indiana banker says good farmers in his area can make a profit paying $100 to $120 an acre for land. But anybody paying more than that in his words "is probably farming for the experience unless he has a specialty crop." And for the marginal operator, the figures even $100 an acre is too much.

An Illinois Production Credit Association specialist agrees with that, pointing out that in view of skyrocketing production costs this year, farmers will find it extremely difficult to make a profit above $120 an acre.

An Iowa PCS banker says $150 an acre is an extremely high land rental. He figures $110 an acre production costs and interest, $35 to $40 for machinery depreciation and interest -- that comes to $150 plus the $150 for the land rent, equalling $300. With those kinds of costs he says a farmer needs $2.30 a bushel for corn to break even. And that leaves nothing for labor, management and profit.

So how do local farmers compare? They're paying anywhere from $50 to $90 an acre for their corn and soybean ground and with good management are getting those 130 bushel yields the Midwest farmers are talking about. With irrigation and top production know-how some are doing a lot better. But it's still a real question for a lot of eastern farmers whether they should be paying $75 or $80 an acre for ground when their farming history shows their average yields are no more than 100 bushels per acre.

It's hard to compare that good deep central Illinois farmland with some of Sussex County's drouthy acres. About all a farmer can do is look at the history of crop production in his area.

How many years has he been hit by a drought? What have his average yields been and what are his production costs? Then look at the going land rents and make a decision

Obviously, the decisions have all been made for 1980. And as the Indiana banker pointed out, some farmers may be farming for the experience.

For them this year's experience should include the true worth of a rented acre. Before another year rolls around, they should know exactly how much they can afford to pay. And regardless of what rented land is going for, they need to know what it's actually worth to them.

There's a tremendous difference between paying too much to buy an acre of farmland and paying too much to rent it. The buyer almost always comes out ahead because of spiraling land prices and mind-boggling inflation. The renter doesn't have that opportunity. If he pays too much rent, he just loses money.

So what's a farmer to do if the going rate seems to be more than he can afford? Perhaps take another look at his production practices. Find a way to increase yields so that he can make a profit. Switch to higher value crops Double crop so the rent is spread over more income. Look for ways to cut costs and perhaps most importantly, consider cutting back -- giving up those high-priced rented acres that don't really make a profit.

It takes good records to know all that and it's not too late to set up the kind of record system that would let a farmer know on a per field basis the profitability of his operation.

People who go to diet doctors often have a wait problem.

Cindy Ann Lupey new Dauphin Dairy Princess

HARRISBURG — Cindy Ann Lupey, daughter of Mr. and Mrs. Tehodore Lupey, Lnglestown is the 1980 Dauphin County Dairy Princess. Crowned May 9 in the mall of the Colonial Park Plaza, Cindy will begin a year of promoting milk along with the assistance of Alternate Dairy Princess, Tammy Renee Yost. Tammy is the daughter of Mr. and Mrs. Vernon Yost, Hershey.

Cindy, a seventeen year old student at Central Dauphin East High School qualified as a contestant because she owns dairy animals even though she does not live on a dairy farm. Much of her experience with the dairy industry has come by way of helping the Miller family show their award winning Holsteins. Cindy owns a junior yearling and a calf at present Presently studying in the business curriculum at Central Dauphin East, Cindy hopes to become a veterinarian's assistant after completing her formal schooling.

Retiring Dairy Princess Debra Cassel, left, crowns 1980 Dauphin County Dairy Princess, Cindy Lupey with alternate princess, Tammy Yost, right.

The new Dauphin County Dairy Princess has been very active in many school and community organizations including the Dauphin County Dairy 4-H Club, Blue Mountain Horse Riders Club, Cheerleading and the Manada Gap Full Gospel Mission Youth Group.

Upon being selected as the new dairy princess, Cindy said, "I'll try and do my best to promote my product - milk."

Crowned by out-going Dairy Princess Debra Cassel before a crowd of Friday evening mall shoppers, Cindy and the alternate princess Tammy Yost had the opportunity to meet the public and answer questions about the dairy industry

Tammy also owns dairy animals while not actually living on a dairy farm herself She has spent a lot of time since she was very young on her uncle's farm near Hershey Her seven year old cow took the first place Junior Pennsylvania ribbon in Harrisburg last year. She has shown in many dairy shows while participating in the Lower Dauphin 4-H Dairy Club and the Lower Dauphin FFA Chapter.

Other activities which Tammy has supported in the past are the Dauphin County 4-H Council, the yearbook staff and booster club at her high school and activities of the Shell's Lutheran Church.

Tammy aspires to attend college in the Fall of 1981 to study dairy science.

Master of Ceremonies for the evening Mall program was John Harris, Dauphin County Extension Agent. Co-ordinators for the contest were Daisy Cassel and Pat Miller Judges who spoke with the contestants in private interviews as well as evaluated them during the public program were dairyman Robert Pardoe Jr , Milton; Sue Beshore, New Cumberland and Susan Kauffman, Peach Bottom.

The miniature golf display provided by the Atlantic Dairy Association attracted many youngsters to the milk production displays and the magic cow was also on hand to meet the consumers.

Berks Co. Farm Women Board

The May meeting of Berks County Farm Women Board was held recently. Clyde Myers, county agent gave a presentation on the 4-H Community Center which will begin construction in 1981.

The group was asked to contribute to the fundraising underway for the 4-H Center.

Ho-down profit from this year was $460 which will be given to the Berks Campus of Penn State.

Berks Heim needs various items such as afghans 54x72 inches, yarn and terry cloth booties. While the bingo held at Berks Heim went well, more help could be used in November.

Hamburg State School extended thanks for the green thumb sale success. And the group decided not to participate in the Berks Expo.

This year's youth project will be for grandchildren. Each group must have 3 volunteers at the Berks Heim picnic for one hour each on June 8.

A little out of the Way But a lot less to Pay

Oxford FFA honors Hayes and Hostetter

BY SUSAN KAUFFMAN
Staff Correspondent

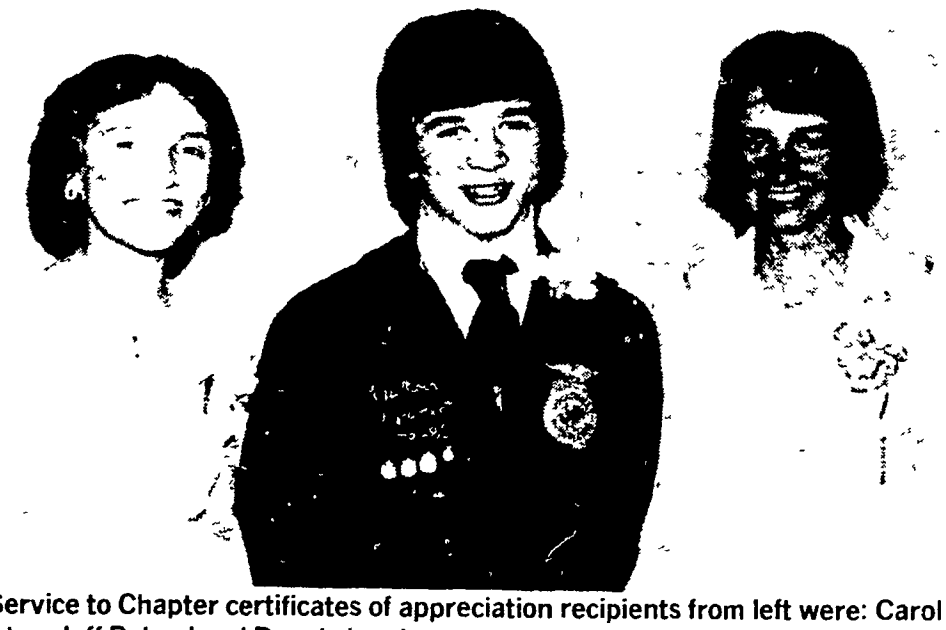
OXFORD — The Oxford Chapter of the Future Farmers Of America invited their families and guest to their fiftieth anniversary banquet last week. Held in the High School cafeteria, the banquet was highlighted by the presentation of a number of awards to members and community residents as well. The Oxford chapter is one of the oldest continuing FFA chapters, having begun two years after the national organization first started.

Receiving the top awards for the year's work in agriculture related fields of study were Star Chapter Farmer award winners; Charles Hayes, son of Mr. and Mrs. Phil Hayes, and Bernie Hostetter, son of Mr. and Mrs. Wilmer Hostetter. Charles also received recognition for the Dekalb Award, state recordbook contest gold medal placing

(Turn to Page C17)

DeKalb award winner, Charles Hayes, is shown with his certificate. Hayes also was honored as a Chapter Star Farmer.

Bernie Hostetter



Service to Chapter certificates of appreciation recipients from left were: Carol Carter, Jeff Roland and Bonnie Lamborn.

Star Greenhands are pictured from left: Arnold Davis, Bonnie Browning and Charles Shelton.

Oxford FFA

(Continued from Page C16)

and dairy products foundation pin. Hayes also served as the student advisor for the local chapter this year, his senior year at Oxford. He also served as student advisor on the county level.

Hostetter, also a senior at Oxford, served as vice-president of the Oxford chapter this year. He received a bronze medal on the state level for his recordbook this past year and has numerous other awards in his FFA experience.

Star greenhand recipients were Arnold Davis, Bonnie Browning and Charles Shelton. Special Service to Chapter certificates of appreciation went to Bonnie Lamborn, assistant secretary of the chapter; Carol Carter, chapter treasurer; and Jeff Roland, chapter president. Bonnie, a junior, also received recognition for a silver medal in state recordbook competition. Carol, also a junior, was awarded a public speaking foundation pin for her work in the parliamentary procedure team this past year. Jeff was cited for a crop production foundation pin and a silver medal in state recordbook competition this his senior year.

Among the many members who were commended for their achievements in the FFA program at Oxford under the direction of Mr. Kenneth Thompson and Mr Scott Gold were the following foundation pin winners: agri mechanics — Mike Cabrera, Steve Brown, David Ham and Jerry Townsend; shop safety — Harvey England and Alvin Miller; public speaking — Bonnie Browning, Lisa Rash, William Wylie, Carol Carter and Bonnie Arrowood; swine production — Joe White, Gordon Gates, Lori England, Steve England and Jeff Roland; horse proficiency — Sue Dougherty, Tracy McKinley, Sandy Peterson, Nancy Yarnall and Thomas Culberson

Dairy products — John Hostetter, John Sallander, Robert Parry, Kenneth Reson, Alan England and Charles Hayes; diversified livestock — William Wylie and Tim Siple; vegetable production — Bonnie Browning; sales and service — Sue Dougherty, Valerie Weaver and Alan England; crop production — Clarence Monger and Jeff Roland; poultry production — Charles Astle; home and farm improvement — Pat Boyd and Terrance King; agriculture processing — Danny Luoto, Mike Willis, Thomas Culberson and Alan England.

State recordbook contest winners from the chapter were seniors Charles Hayes, gold, Kenneth Pierson, silver; Jeff Roland, silver; and Bernie Hostetter, bronze. Junior recordbook state placings went to Charles Astle, gold; Bonnie Lamborn, silver; and Robert Parry, bronze.

Sophomore state recordbook recipients were William Wylie, bronze; Thomas Williams, bronze; and Daniel Osborne bronze.

Out of school recordbook winners were Alan Mason, gold and Ed Breckbill, gold.

Honorary memberships for life were presented to two community residents who have especially helped the local chapter. William Hostetter and Joel C. Brown were cited for this award for the time and attention they have given the various members in the past.

Officers of the Oxford chapter for the 1979-1980 school year are: president, Jeff Roland; vice-president, Bernie Hostetter; secretary, Bonnie Arrowood; treasurer, Carol Carter; student advisor, Albert Brimmer and Charles Hayes; reporter, Valerie Weaver; sentinel, Bob Parry; chaplain, Charles Astle; parliamentarian, Tim Siple; assistant secretary, Bonnie Lamborn; assistant treasurer, Bill Wylie; and student advisor on the county level, Charles Hayes.

Chapter sweethearts are Carol Carter, Bonnie Arrowood, Bonnie Lamborn and Valerie Weaver.

FFA sweethearts from left are: Carol Carter, Bonnie Arrowood, Bonnie Lamborn and Valerie Weaver.

Senator blocks move to limit price support loans

WASHINGTON, D.C. — Senator Herman E. Talmadge, chairman of the Senate Committee on Agriculture, Nutrition, and Forestry, succeeded in removing a provision from the 1981 budget resolution that would have placed severe restrictions on future farm price support programs.

On Wednesday, May 8 the Senate unanimously approved an amendment offered by Talmadge to exempt farm price support loans and related programs from a provision in the Senate version of the budget resolution that would make all government loan programs authorized by law dependent on separate and annual appropriations by Congress.

Farm price support loans are not now subject to the appropriations process but, when authorized by Congress, are made as necessary to producers by the Commodity Credit Corporation of the U.S. Department of Agriculture. CCC crop loans have been the government's principal mechanism for supporting farm prices since the 1930s.

Talmadge told the Senate the proposal of the Senate Budget Committee to make such crop loans subject to the Congressional appropriations process would "cause a fundamental shift in our agricultural price support programs and result in an administrative nightmare."

"If the appropriations committee appropriated less money than needed to carry out commodity price support loans at the authorized levels, a number of questions would immediately arise: Who receives the loans and who does not?; Do wheat farmers receive price support loans while corn producers do not?; Would the secretary of agriculture be required to prorate the funds available for making loans?".

Talmadge said the loan provision recommended by the Senate Budget Committee is not related to the effort to balance the Federal budget and that his amendment "would not increase the 1981 budget one dollar."

"Under the financing procedure dictated by the resolution, commodity price support loan programs would no longer be a guarantee against unreasonably low commodity prices, and the ability of Congress to respond quickly in an emergency would be eliminated," Talmadge said.

"This section ignores why certain of our agricultural programs are entitlement programs — they are designed and funded in a manner that protects farmers against unpredictable events such as the weather, fluctuating economic conditions, or a grain embargo," he said.

The Talmadge amendment would exempt from the loan provisions of the budget resolution agricultural price support and related programs of the type in operation on January 1, 1980, which are funded through the Commodity Credit Corporation.

Delaware County announces Spring Fair winners

MEDIA — Delaware County 4-H held its annual Spring Fair recently at Granite Run Mall, here.

According to Nancy Harrold, 4-H assistant, featured at the fair were a club poster contest, a demonstration and public speaking competition, a talent show, a fashion show, a hockey exhibition, club displays and individual project competition.

The annual poster contest, in which the public does the judging, was won this year by the East Lansdowne Bonnie Bugs 4-H Club. The poster was made by 4-H member Kim Smith. The club will receive a free ice cream party as a prize. Champions and reserve champions in individual competitions were as follows: Indoor Gardening — living plants, Carolyn Smith, Lansdowne and Kelly Warder, Trainer; dry arrangements, Debbie Roman and Michelle Tate, Trainer; corn husk dolls, Anita Carr, East Lansdowne and Drew McNally, Havertown; peanut plants, Drew McNally and Marianne Repetto, Havertown; herbs, Nancy Parket and Amy Parker, East Lansdowne; seedlings, Joan Redden, Holmes and Kathy Boeleau, East Lansdowne; basket arrangements, Maria Henwood, Havertown; and Impatiens, Amy McNally, Havertown and Norman Redden, Holmes.

Clothing— Start Stitching, Debbie and Terri Bonhage, Havertown; jiffy sewing, Dianne and Kristin Stinger, Springfield; gathered skirt, Lisa Rice and Mary Ellen Hissins, Havertown; pattern with a skirt, Mary Beth Kean and Michelle Repetto, Havertown: school outfit, Beverly Bonhage and Susan Lynch, Havertown; and Create With Fabric, Denise Cahill and Joanne Brady, Havertown.

Foods — Jams and Jellies, Carmen Jones and Joewana Freeman, Chester; Tricks for Treats, Elsie O'Donnell and Lisa D'Ambrosia, Springfield; and All Together With Foods, Mattie Adams and R. Gerald Jordan, Chester

Electricity — Electric Lamp, Michael Jerdon, Upper Darby

Public Speaking and Demonstration Competition — The following members received cash awards — public speaking, Deidre DeLang, Upper Darby; Junior Demonstration, Valery Christiansen, Coleen Carr, and Amy and Nancy Parker, East Lansdowne; and Senior Demonstration, Jackie Brown and Dawn Getty, Ridley Township.

POURED SOLID CONCRETE WALLS are far stronger than block!

- Manure Pit Walls
- Hog House Walls
- Chicken House Walls
- Concrete Decks
- House Foundation Walls
- Cistern Walls
- Barnyard Walls
- Concrete Pit Tops
- Silage Pit Walls
- Retaining Walls

POURED CONCRETE WALLS ARE FAR STRONGER THAN BLOCK!

You get about 40% more concrete for your dollar with a poured solid concrete wall as compared to a hollow core block wall

A poured solid concrete wall weighs about 50 lbs more per cubic foot! Far denser What s more poured solid concrete walls are monolithic there are no joints!

This is why laboratory tests show poured solid concrete walls have many times the flexural and compressive strength to withstand the side and down pressure caused by earth wind water and building loads and the materia densit, to resist water penetration

Best of all thanks to modern and efficient construction techniques all heigths and thicknesses of poured solid reinforced concrete are competitively priced

Let Balmer Bros Do YOUR Next Concrete Project!

Milk production highest in 14 years

SOUTHAMPTON — "The U.S. dairy industry produced more milk last year than in any year since 1965. Milk production in 1979 totaled approximately 123 5 billion pounds, up 1.3 percent or 1.6 million pounds from 1978," James E Honan, General Manager of Inter-State Milk Producers' Cooperative, announced to the membership.

"In the Phildelphia-Baltimore-Washington Federal Milk Marketing Order 4 area, the total Class I sales fell 20,000,000 pounds from March 1979 to March 1980," continued General Manager Honan. "For the same areas, total milk production went up 10,000,000 pounds.

Consequently, Honan added, "your market's Class I utilization fell from 57.2 percent to 51 6 percent from March, 1979 to March, 1980." Other items included the following·

Increased production per cow made up the slack. Production per cow was up 2 percent or about 234 pounds in 1979.

Each cow in the U S produced an average of 11,474 pounds of milk That's 1,334 gallons, or a year's supply of fluid milk and cream for 40 Americans — from just one cow

States with the largest milk production last year were Wisconsin, 1,722 million pounds; California, 1,041 million pounds; New York, 888 million pounds; Minnesota, 718 million pounds; and Pennsylvania, 664 million pounds

Production of many manufactured dairy products also increased last year There were 2 19 billion pounds of American type cheese produced in the U S. in 1979, 5 5 percent more than in the previous year and a record high for the second straight year Production of all types of cheese, except cottage cheese, totaled 3 71 billion pounds, also up 5 5 percent Americans consumed approximately 17 9 pounds of cheese each in 1979, 3 4 percent more than the year before.

Butter production dropped only slightly; it was down .9 percent to 985 million pounds. Per capita consumption of butter remained about the same as in 1978. There were 30 million fewer pounds of creamed cottage cheese produced last year, for a 2.8 percent drop to 847 million pounds. However, production of lowfat cottage cheese was up 2.6 percent over 1978, totaling 155 million pounds.

Less nonfat dry milk for human food also was produced The year's 907 million pounds was down 1.4 percent from 1978. Manufacture of frozen products also declined overall last year. While ice cream production was up slightly, totaling 818 million gallons, production of ice milk, at 294 million gallons, was down 4.6 percent. Sherbet production dropped 8 percent to 45.8 million gallons.

Mary Jo Depp named regional 4-H agent winner

UNIVERSITY PARK — Mary Jo Depp, Jefferson County extension agent on Penn State's Cooperative Extension Service staff, has been named regional winner in the Search for Professional Excellence Contest sponsored by the National Association of County Agricultural Agents.

Depp will represent Extension agents in the Northeastern United States at the annual meeting of the county agents association in Oklahoma City, Oklahoma in August. She will present a paper on her 4-H and youth programming in Jefferson County.

"Mary Jo is one of 20 Extension agents in the United States who will share their professional expertise with fellow agents," points out Joseph Macialek, extension community resource development agent and state program chairman.

The 4-H and youth category includes extension programs that have resulted in the enhancement of skills, leadership potential, social development, or economic well-being of youth.

Pre-emergence tank-mix combination controls both grassy and broadleaf weeds

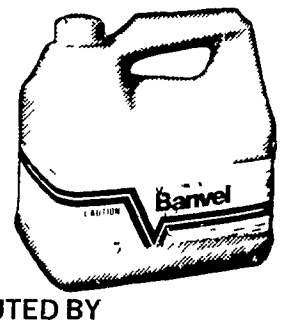
Banvel®+Lasso®*

a giant first step toward total weed control in field corn

Successful on millions of acres where corn is the major crop, the Banvel + Lasso herbicide combination can give you "near perfect" (90-100 percent) control of a wide spectrum of grassy and broadleaf weeds, when used according to label directions.

Banvel + Lasso herbicide is compatible with most fluid fertilizers. It needs no incorporation. There is no carryover.

Take a giant step toward total weed control. Call about the Banvel + Lasso combination. Remember, the "near perfect" herbicide is the one you build...starting with Banvel herbicide...from Velsicol.



*The combination is effective on all major soil types except light sandy soils Lasso is a registered trademark of Monsanto Company

To achieve best results be sure to read understand and follow the label

Could 1980 be the year of the grasshopper?

TO STOP A GRASSHOPPER:

SOMEWHERE IN THE WEST — The air is still and cool at dawn. Newly grown grasses and weeds in multi-shades of green cover a vast, silent range.

The soil is uniformally moist and the temperature perfect: hordes of newly-hatched grasshoppers — called nymphs — sluggishly emerge from their buried egg capsules. Already hungry, they stretch their legs and climb the nearest blade of grass to begin feeding.

This scene will be repeated countless times across hundreds of millions of acres of western rangeland this Spring and Summer.

Grasshoppers compete with humans for food, fiber and forage. During some years, when grasshopper populations are low and grass is plentiful, humans and grasshoppers coexist peacefully.

"Grasshopper populations tend to be cyclic," said L.C. Keenan, newly selected staff officer for the U.S. Department of Agriculture's Animal and Plant Health Inspection Service. "Grasshoppers are usually present in economically damaging numbers in relatively small localized outbreaks somewhere in the west every year."

USDA defines economically damaging as 8 or more grasshoppers per square yard — that's 38,720 per acre.

One female can lay up to 200 eggs — only two need to hatch and survive to become adults for the population to remain the same as the year before. One grasshopper per square yard over an entire acre — 4,840 grasshoppers — together will eat 12 pounds of dry grass a year.

Every few years or so," Keenan said, "conditions are perfect for a widespread outbreak like the one in 1979. We had them during the dust bowl years of the 1930's and again in the late 1950's Populations are usually high for 3 to 5 years — the middle years are the worst — then populations decline drastically. The decline is usually due to natural controls, principally unfaorable weather, but also due to predators, parasites and diseases."

If the weather is dry and warm, more grasshoppers hatch. Cool, wet weather deters the hatch. The ideal conditions for a grasshopper outbreak are a cool, moist early Spring, followed by a hot Summer and a late Fall, Keenan said.

After drought and grasshoppers hit the great plains in the early 1930's, Congress granted funds for organized grasshopper control on both range and cropland. The insecticides used then were mostly arsenical compounds. Aerial application began generally in the late 1940's using chlorinated hydrocarbons like aldrin and dialdrin.

In 1952, a federal-state task force recommended the federal government drop its cropland treatments because newly developed chemicals and improved application equipment made it possible for growers to control cropland grasshoppers on their own.

Cooperative grasshopper control was developed in the 1940's. Under the program Keenan said, the rancher or farmer pays a third of the cost, the federal government pays another third and the states that participate pay the final third. If a state does not participate, the rancher or farmer must pay two-thirds

"We expect a major outbreak again this year in 17 western states," Keenan said "And we estimate the total program costs per acre to be $1.70 — that's about 57 cents per acre from each rancher."

The timing in applying insecticide is critical, Keenan said Carbaryl and malathion are most effective when the grasshoppers are immature. Toxicity for carbaryl is 10 to 20 days and 2 to 5 days for malathion. Neither is harmful to animals or humans when properly applied, but bee hives must be removed from areas that will be sprayed.

During the 1979 outbreak, 7 million acres were treated at a cost of $5.6 million to the federal government During the outbreak, some areas recorded 60, 100 and even 200 grasshoppers per square yard.

We'd like to control grasshoppers without chemicals," Keenan said "However, we find there's a gap between the public's concept of where they think we are in developing biological controls and where we really are."

One pathogen USDA is currently studying is Nosema locustas, which is Latin for "grasshopper sickness."

"Nosema is a grasshopper disease, "Keenan said, "that occurs naturally in 2 to 3 percent of all grasshoppers The disease affects different species differently. As far as we know, Nosema only affects grasshoppers. When conditions are right, Nosema controls the pests naturally. We're trying to develop the technique to artificially rear Nosema, then put it in a bait.

"Actually, we're in the trial and error stage with Nosema," Keenen said. "Nosema is not yet in commercial production. The only Nosema we have is that produced by USDA scientists. Even if a firm began commercial production tomorrow; they could produce only enough to treat 100,000 out of several million acres this year.

"And Nosema is very fragile," Keenan said. "In its present form it's not something you're going to be able to buy and store from year to year or season to season. It has to be produced and used almost immediately. And it's expensive to produce."

"Nosema is an exciting approach to grasshopper control and it may have possibilities," Keenan said. "But it has a long way to go before it can be produced commercially and used routinely for control "

Keenan said scientists are also working on Entomophthora grylli — a fungal disease of grasshoppers. "This is a 10-year program," Keenan said. "It's a long way down the road."

Keenan added this year USDA will compare Nosema with malathion on a test plot in Arizona. "We'll run the test on a 40,000-acre plot notoriously infested with grasshoppers. This will help us evaluate how effective Nosema is."

Research for more effective and ecologically acceptable alternatives for controlling grasshoppers will continue, Keenan said. "For now, we've got to manage grasshoppers with what we've got."

Pa. Angus farm shows reserve champ heifer

BY SHEILA MILLER

FREDERICK, Md. — Stonylonesome Farm, Stahlstown, was the only Pennsylvania exhibitor participating in the Eastern Invitational Show and Sale to walk away with a championship.

Their February, 1978 heifer, Blackbird SL 771, was the reserve grand champion heifer at the Angus show held last Sunday.

The daughter of Blackbird SL 698, out of Contact of Wye, stood first in her class. She went on to be tagged the Junior champion heifer.

The show's reserve grand champion heifer will be traveling to Somerville, Ohio, joining the other registered Angus cattle at Maebill Angus Farms, the volume buyer at Monday's sale. William and Mae Huber bought the heifer for $1800.

The Huber's made sure Blackbird had a fitting traveling companion. They also bought the reserve grand champion bull, Sayre Great Horizon, for $3900.

The April 1979 bull was consigned by Sayre Farms, Phelps, New York. He was sired by Sayre Great Heritage and was out of Blackbird 441H of Sayre.

Sayre Farms, for the second year in a row, exhibited the grand champion bull. This year's champ, Sayre Vanguard is a March 1979 bull sired by Sayre Patriot out of Scaara 4691 of Sayre. His 365 day actual weight was 1120 pounds, with a hip height of 51 inches.

A two-thirds interest to this bull and full possession was purchased by Gibralter Cattle Co., Cape Girard, Missouri for $24,000.

The grand champion cow at Sunday's show was exhibited by Mar Lee Farms, Woodsboro, Maryland. Marlee Maggie Linette 1098, a daughter of Linebacker of Wye, sold to White Hall Farm for $3800.

The reserve grand champion cow, Harmony Jaunty K 3285, was exhibited by Harmony Grove, Lawrenceville, Virginia. She sold to Maebill Angus Farms for $3280.

At this year's sale, 63 lots were sold for a total of $106,735, an average of $1694. This was down from last year's sale where 52 lots brought $95,900, an average of $1844.

This year there were 7⅔ bulls sold for an average of $4533. Bad news again—bulls sold better in 1979 when 6 bulls averaged $2163.

There were 55 female lots at this year's sale, averaging $1309 a piece—a drop from a year ago when the 46 lots averaged $1803.

There were consignors from eight states at this year's show and sale, including New York, Maryland, Pennsylvania, Connecticut, Maine, Virginia, New Hampshire, and New Jersey.

The show results are as follows:

Bull Class 1

1. Sayre Farms; 2. Rishels Edlyn Farm, Glen Rock.

Bull Class 2

1. Sayre Farms; 2. Sugar Loaf Farm, Staunton, Va.; 3. Brookline Farm, Queenstown, Md.

Bull Class 3

1. Zeuswyn Farm, Culpeper, Va.; 2. Harmony Grove

Bull Class 4

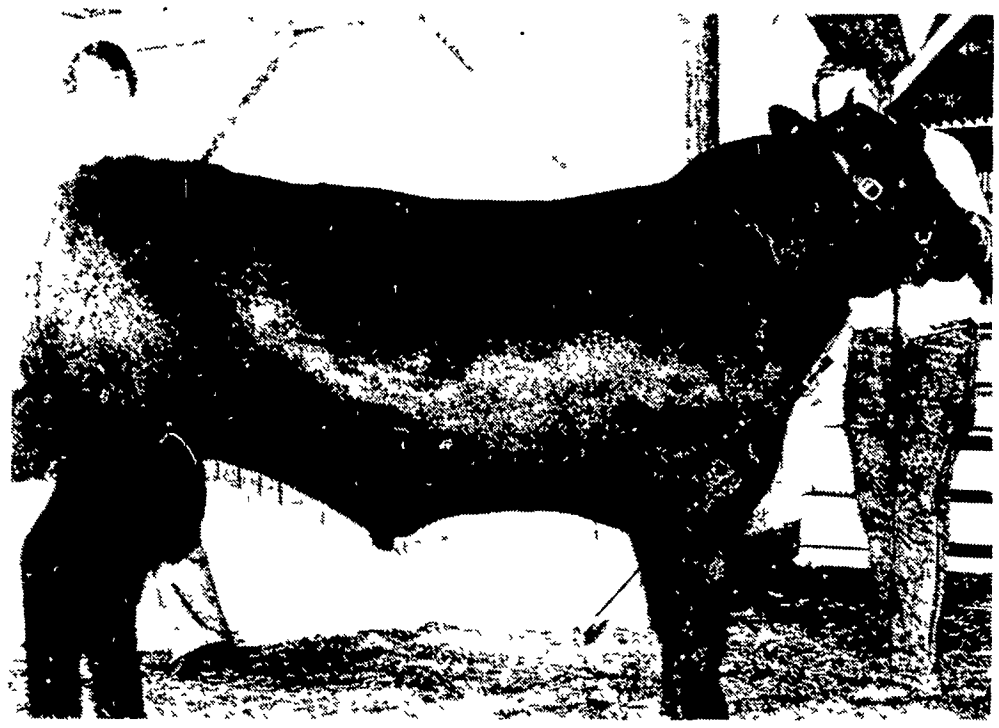
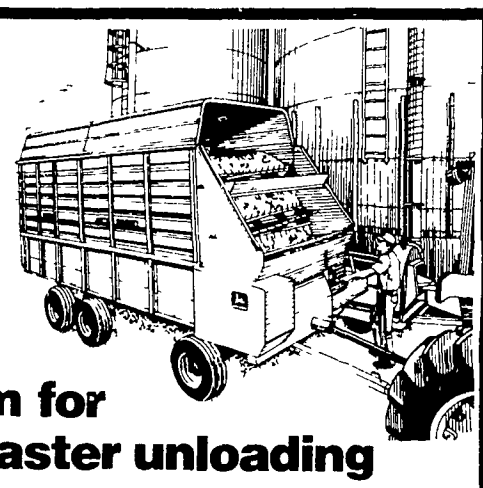
(Turn to Page C22)



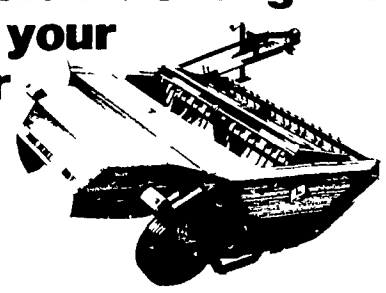
Sayre Vanguard was tagged the grand champion bull at the Eastern Invitational Angus show on Sunday. Mark Richardson, manager of Sayre Farms, Phelps, New York, and Greg Krueger, at halter, brought the bull to the Maryland show and sale. Two-thirds interest in the champ sold for $24,000.



A new drive system for even faster unloading

The new John Deere 714A and 716A Forage Wagons can now unload faster than ever Top speed has been increased to 11 5 feet per minute to keep your silage-making operation running smoothly Capacities of 593 and 677 cubic feet mean fewer trips to the silo See the 714A and 716A today

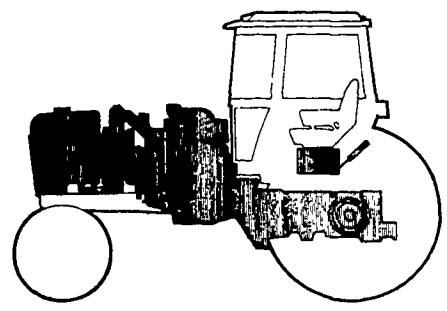
The 7¼-foot-cut 1207... maneuverable enough to conquer your irregular hay fields



Crooked fence lines uneven terrain steep hillsides – they can steal your haying efficiency Tackle them with our 1207 Mower/Conditioner – the compact machine with big-capacity features Adjustable roll pressure platform float platform stabilizer flotation tires tucked close to cutterbar side-to-side and front-to-back balance all combine to conquer small irregular fields

THE NEW IRON HORSES

MORE HORSES MORE IRON



More strength throughout from more iron within

The drawing above gives you a good idea of where John Deere engineers concentrated their efforts when this whole line of tractors was redesigned As you can see practically everything but the paint was beefed up in the revision

Stop in and we ll 'walk you through" the iron story on the tractor size of your choice 90-hp 4040 110-hp 4240 130-hp 4440 155-hp 4640 or 180-hp 4840 We've got all the facts on the NEW IRON HORSES — the tractors with more horses and more iron

Tent caterpillars will soon be munching

WASHINGTON, D.C. — It happens every spring. Some trees that have just sprouted new leaves lose them all to hordes of hungry tent caterpillars.

A single web of tent caterpillars, containing more than 150 insects, can strip a healthy but unlucky tree, according to the National Wildlife Federation.

"Tent caterpillars are the larvae of a fuzzy, reddish-brown moth," explains the National Wildlife Federation. "The moths never eat, living only a few weeks— just long enough to mate and lay eggs—but their offspring are devastating."

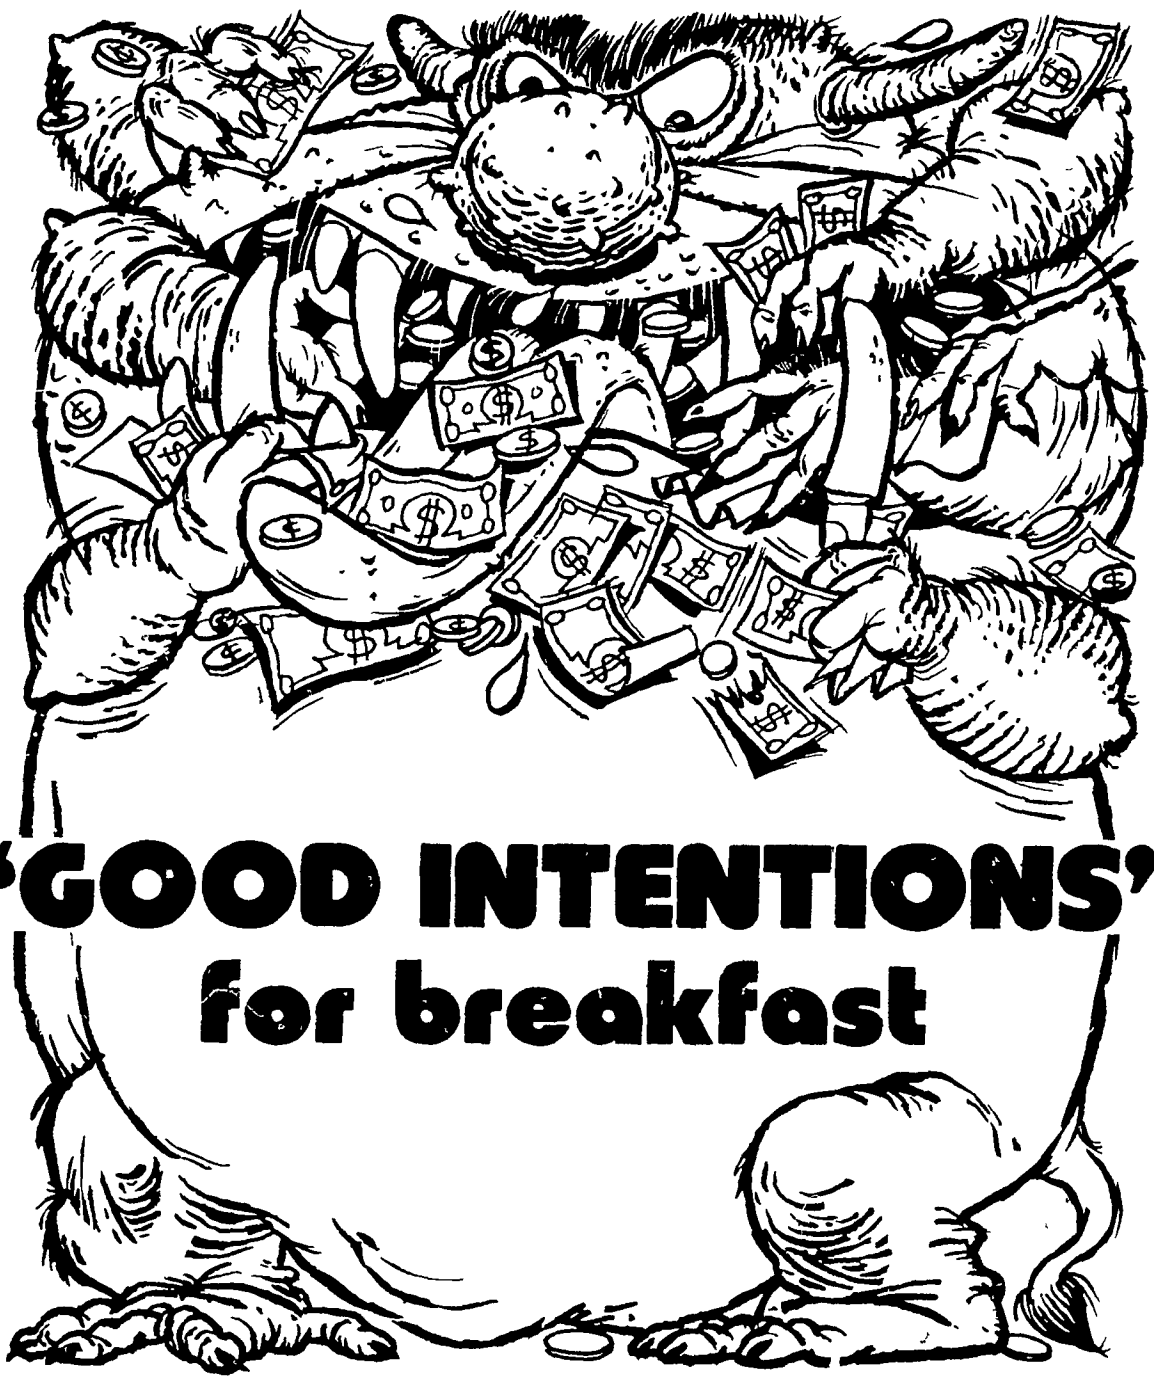
The female moth lays her eggs in a ring around a tree twig—often a wild cherry or apple tree. Then she covers the eggs with a bubbly liquid which soon hardens into a shiny, weatherproof covering that protects the eggs all winter.

When tent caterpillars hatch in the spring, they gather at a forked branch of the tree and begin to form their tent-like web with silk from glands in their mouths. "The web acts like a tiny greenhouse," says NWF, "storing heat and keeping the insects warm in chilly weather. It also keeps them dry during rainstorms and shades them from the bright rays of the sun." As the caterpillars grow, they add onto their tent, so it, too, gets bigger.

Tent caterpillars stuff themselves on leaves for almost six weeks. Then they crawl away from their food tree and find a protected place to spin their powdery cocoons. In two or three weeks they change into the moths often seen fluttering around street and porch lights in midsummer.

It's an unfortunate cycle for many trees, but a vital one for the birds and parasitic wasps that feed on tent caterpillars. So while control of the caterpillars is sometimes necessary, naturalists oppose wiping them out completely, says NWF.

Inflation eats



"GOOD INTENTIONS" for breakfast

Get a savings plan that really works!

Plan now for the amount of money you know you'll need next year . . . get a CLUB! Don't wait for taxes and other big expenses to take a crippling bite out of your budget all at one time.

COUPON SAVING is a proven method of reaching savings goals. We all realize how difficult it is to put a little money aside for saving each week. It's so easy to put off saving this week with a promise to add a little extra next week.

As the months roll by, your coupons will serve as an ever present "reminder" so that when tax, vacation or education bills are due — you'll have hard cash instead of "GOOD INTENTIONS."

Set your savings goals now, whether they be for taxes, that all-important education, a big ticket item which will need to be replaced or, saving to guarantee that well-deserved vacation can actually be taken.

Relying on "GOOD INTENTIONS" can be hazardous to your budget.

COUPON SAVING REALLY WORKS!

Just as a reminder that you can pay your club through the Round-the-Clock Tellers . . . one of our 7" plush and cuddly owl mascots can be yours very economically when you open your CLUB.

Supply is limited, so don't delay — open your club today!

Philadelphia chapter wins area judging contest

DOYLESTOWN — The Philadelphia Chapter of the Future Farmers of America had the top place team at the Southeast Area FFA Livestock Judging Contest, held recently at Delaware Valley College.

Teams from Upper Bucks, Western Montgomery, and Lehigh County FFA's competed against the Philadelphia four. They judged classes of beef, sheep, and swine despite the rain that tried to dampen the teams' enthusiasm.

The team from Lehigh County had a score that ranked second to the top team. Western Montgomery came in third, with Upper Bucks falling into fourth place.

The first place team at the Southeast Area Livestock Judging Contest was the Philadelphia Chapter FFA, left to right, Allan Downing; Brian Godfrey, Jamal Hampton, and Aaron Weilerstein.

The top scoring individual was Cheryl Wessner, of Lehigh County FFA. She was also the high scoring individual in oral reasons.

Two Philadelphia Chapter team members came in second and third in the contest. They were Aaron Weilerstein and Jamal Hampton, respectively.

Fourth place individual in the contest was Ronald Haas, of Lehigh County; and Brian Godfrey, of the Philadelphia chapter was fifth over-all.

Twenty FFA members participated in the contest.

The top scoring individuals were, from left to right in order of placing, Cheryl Wessner, Lehigh Co.; Aaron Weilerstein and Jamal Hampton, Philadelphia Chapter; Ron Haas, Lehigh Co.; and Brian Godfrey, Philadelphia Chapter.

Thomasville 4-H Clubs announces dates

DOVER — President Carol Haskins conducted the monthly meeting of the Thomasville 4-H Club.

Several forthcoming events were discussed including the petting zoo at the Hospital Fete, blue forms for national awards and Rural Life Sunday, May 18.

Hege Raastad, Dover High School A.F.S. student from Norway presented a slide program.

The next meeting will be Tuesday, May 27 at 7:30 p.m. at the 4-H Center. Reported by Beverly Eisenhart.

York Firm gets Governor's Award

HERSHEY — Charles G. Summers, Jr , Inc., a New Freedom, York Co., vegetable canning firm, has been presented with the Governor's Export Award. The award was presented on Sunday, May 4 at the Pennsylvania International Trade Conference.

The Governor's Export Award, a new award, is presented to Pennsylvania companies which have demonstrated excellence in the development of international trade through exporting.

"Charles G. Summers, Jr., Inc. deserves recognition for increased exports of canned vegetables by 1,285 percent since 1974," said Penrose Hallowell, Pennsylvania Secretary of Agriculture. "They have shown the value of actively pursuing overseas markets."

In 1974 the New Freedom firm exported 1.27 percent of their gross sales. In just five years they raised their exports to 10.23 percent of their gross sales. Exports for the firm have grown from $120,613 in 1974 to $1,059,428 in 1979.

Company representatives said they believe their success is due in large part to personal contacts made in export countries. Visits to the export countries gave them a better understanding of the consumers, marketing habits, label requirements and the development of a successful promotion compaign aimed at their export customers, they added.

Charles G. Summer, Jr., Inc. exports canned vegetables to Kuwait, Saudi Arabia, Quatar, the United Arab Emirates, Bahrain, Oman, Liberia and the Bahamas.

VVND task force ends alert

ALEXANDRIA, Va. — USDA officials have removed the federal quarantine on a commercial aviary in Alexandria, Va., and have ended the task force set up last month to eradicate an outbreak of exotic Newcastle disease, VVND.

Richard Rissler, director of the task force for USDA's Animal and Plant Health Inspection Service, said state and federal veterinarians have almost completed eradication activities that began early in April, when exotic Newcastle disease was diagnosed in a young yellow-naped Amazon parrot that had died in a Camp Hill, Pa., residence shortly after purchase from the commercial aviary of Kevin Smith in Alexandria, Va.

Investigations by federal and state veterinarians showed many birds exposed to the diseases, as well as additional infection at the Smith aviary.

Rissler said the federal quarantine is being lifted from the Smith aviary as it has now been 15 days since all birds in the aviary were destroyed and the premises thoroughly cleaned and disinfected. It is now considered safe for the facility to resume operation without danger from the original disease outbreak, he said.

Since confirmation of the disease by laboratory diagnosis on April 7, federal and state veterinarians have traced the movement of infected or exposed birds. Nearly 2,100 birds at 120 different locations in 13 states and the District of Columbia have been destroyed to prevent the spread of this potentially disastrous disease into commercial poultry operations. Owners of these birds were paid $87,000 in indemnities to compensate them for their losses.

Yodel and away we go — to the rodeo

BUCK — The Keystone Rodeo Company galloped into the Buck Saturday for an exhibition of bucking, roping and riding.

Opening ceremonies, one of the more colorful events, were welcomed by the crowd as riders in matching gear and swirling flags galloped through figure eights and formations to thrill the spectators

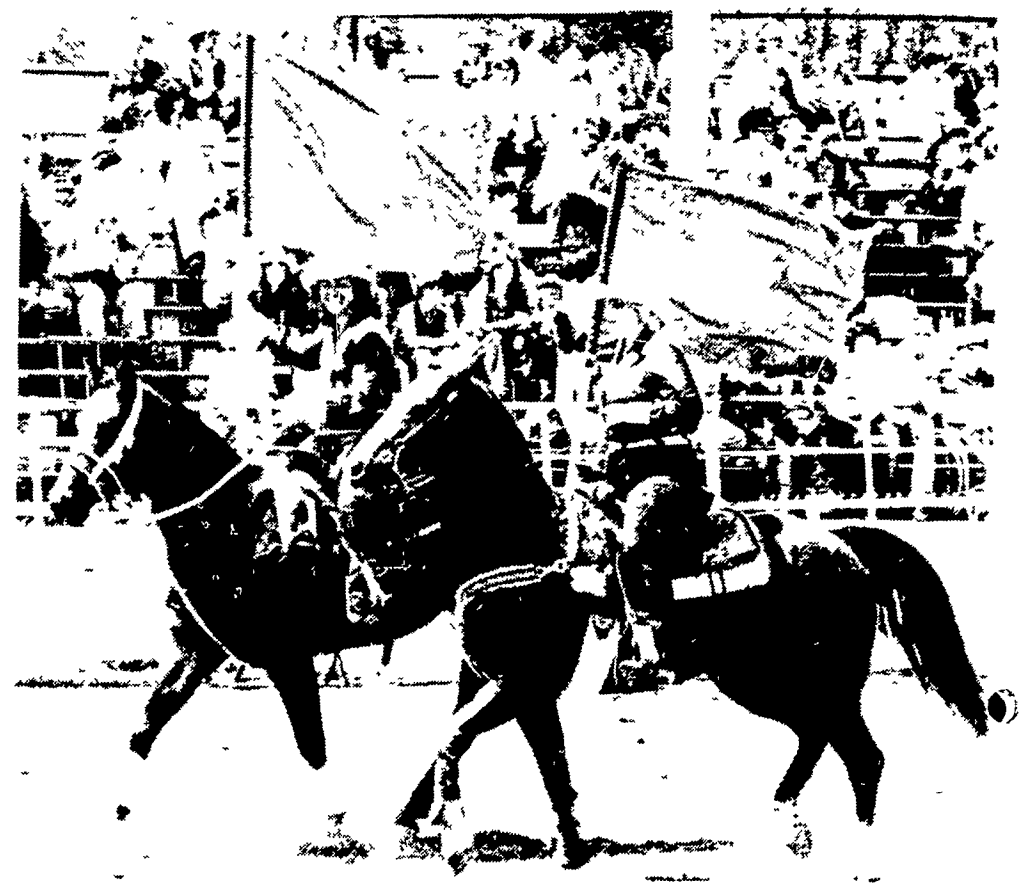
New animals and old rodeo s.andbys provided excitement for the crowd as the cowboys dusted off their gear and welcomed in the 1980 rodeo season. While the action was planned for the ring, the spectators got a little action of their own.

During the bucking horse event, one of the new animals stormed out of the chute, hurled his rider with fury and blew through the gates at the far end of the arena like a tornado. Several spectators were flattened during the mount's exit, and one ambulance attendant was injured. Jan Carson, the girl who rides the Brahma bull, suffered lacerations of the head, and Sam Swearingen a broken foot in the mishap.

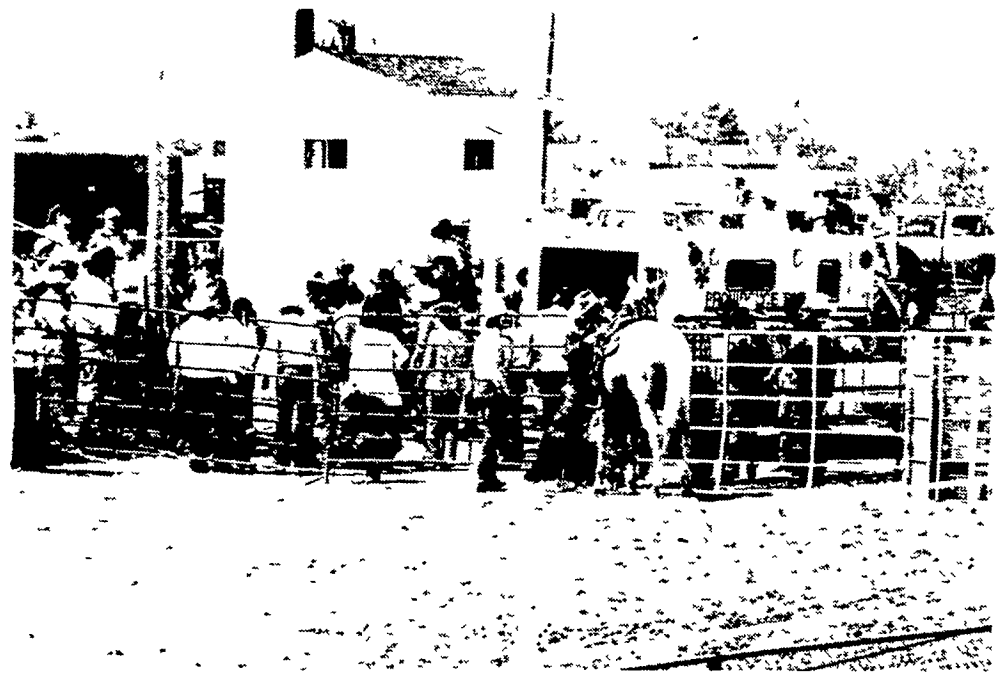
After the excitement settled down in the stands, the rodeo continued with Keith Isley, the rodeo clown provided some risky but necessary assistance to riders entangled in gear when they were thrown

Michael Rhineer Jr. thrilled the youngsters with his trick roping, and a trick riding team rounded out the afternoon's events.

High bucking horses and bulls were the highlight of the afternoon session as the rodeo started its 1980 season. Here the rider sticks with the horse's swell.

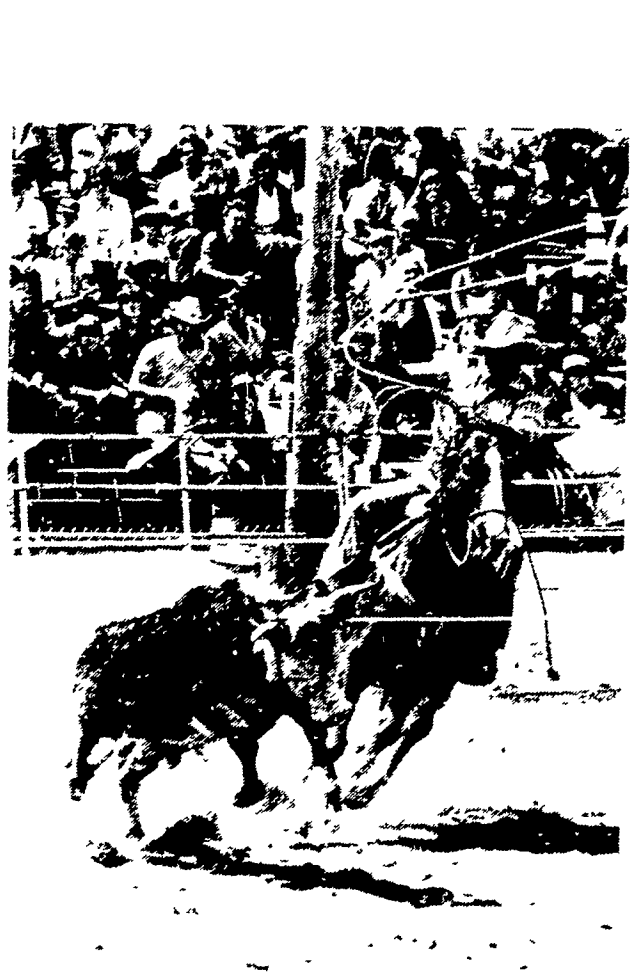


One of the more colorful aspects of the rodeo is the opening ceremony where riders and flags around the ring.



One of the bucking horses making its debut on the rodeo circuit crashed through these steel gates and injured spectators, requiring a call for ambulance attendants.

Janice Barrett give the crowd a flashy demonstration of trick riding.



Calf roping is always one of the crowd favorites. Saturday's event proved no exception as riders tried their luck at catching fleetfooted calves

Keith Isley, the rodeo clown, came to the rescue of several riders during the afternoon, then leaped into the stands

Mike Rhineer Jr. made a dramatic entrance to entertain the crowd with trick roping.

Maryland losing agricultural land

WASHINGTON, D.C — A recent study by the National Agricultural Lands Study indicates that the state of Maryland has lost an average of 78,000 acres of agricultural land to other uses between 1967 and 1977. About one-third of the land was prime farmland. The study showed cropland in Maryland decreased from 1 9 million to 1 7 million acres over that period, pastureland increased from 457,000 to 486,000 acres while forestland decreased from 2 7 to 2.1 million acres.

The current acreage of prime farmland in Maryland was reported at about 1.3 million acres with about 814,000 acres currently in cropland use. The potential for new cropland is limited, the NALS study observes, with some 145,000 acres having a high potential and 382,000 acres a medium potential for conversion back to agricultural land. These potential agricultural acres are currently in pastureland, forest land and in other uses.

If Maryland continues to lose its prime agricultural land at the current rate, it will lose an additional 575,000 acres, or 44 percent of its total by the year 2,000, less than 20 years away.

Conservation district officials in virtually every county in Maryland reported that the conversion of agricultural land in their area was "a serious problem."

Montgomery County Soil Conservation District officials estimated that some 20,000 acres of agricultural land had been lost through conversion over the last five years, and another 20,000 acres idled because of development, with 33 percent of the total being prime farmland. Loss of an additional 15,000 acres in both categories is projected over the next five years.

Baltimore County SCD estimated that 9,000 acres have been lost, 1,000 bypassed, with an additional 9,000 acres to be lost or put out of production within the next five years. Twenty percent of ag land lost was prime farmland.

Carroll County SCD officials said that the problem was "very serious" It was estimated that 15,000 acres have been lost over the past five years, with another 7,500 to be lost within the next five years. Seventy-five percent of the land lost was said to be prime farmland.

Prince George County SCD officials reported that 8,000 acres were lost with 2,000 idled over the past five years. It is estimated that 7,000 acres will be lost and 10,000 acres idled within the next five years. Fifty percent is said to be prime farmland.

Howard County SCD officials reported 10,000 acres lost and another 10,000 acres idled over the past five years. A study indicated that 71.7 percent was prime farmland. About 5,000 acres is projected to be taken out of agriculture within the next five years.

Anne Arundel County SCD officials estimated 4,500 acres lost and 5,000 idled since 1975, with 3,500 projected for conversion and 20,000 acres to be idled within the next five years.

Harford County SCD officials estimated 7,000 acres lost and 500 idled since 1975, with 3,500 to be lost by 1985. Fifty percent of the land lost is prime farmland

Queen Anne's SCD officials estimated 3,000 acres lost and 1,500 idled since 1975, with 6,000 acres to be lost or idled by 1985. Seventy five percent of land lost is prime farmland.

Calvert County SCD officials estimated 5,000 acres lost and 4,000 idled since 1975, with 8,000 acres to be lost or idled by 1985. Twenty percent was said to be prime farmland.

Other county estimates included: St. Mary's 6,500 lost or idled; Charles County 9,000 acres lost or idled; Talbot, 3,500 acres lost or idled; Wicomico, 1,000 acres lost or idled; Garrett, 4,000 acres lost or idled. Caroline and Dorchester counties reported the problem as slight. The Cactoctin SCD and Frederick SCD in Frederick county said the problem was slight, although the Frederick SCD estimated that up to 7,000 acres of agricultural land could be lost by 1985.

Among impacts cited by most of the local conservation districts were farms going out of business; prime farmlands being lost; increased soil erosion; increased water pollution; and cost of public services going up.

Freezing rhubarb is simple this way

LITITZ — Rhubarb is one of the simplest products to freeze according to Greta Vairo, home economist. To freeze rhubarb, trim and wash stalks. Cut stalks into one to two inch pieces, for ease in future use. Place in a covered flat pan in the freezer until frozen throughout. Pack in moisture vapor-proof bags and return to the freezer. By using this method, you can remove as much as you need at a time.

Are U.S. farmers getting their fair share?

WASHINGTON, D.C. — Do American Farmers receive a fair return for their investments, hard work, and high risks?

Considering that they feed and clothe hundreds of millions throughout the world, some farm folk may doubt that they're receiving a fair reward. And a quick glance over the 1970's seems to bear out their suspicions.

Except in 1973, when total per capita income in the farm sector reached 110 percent of that for the nonfarm sector, farm people consistently received a smaller per capita income than nonfarm people.

Without income from nonfarm sources, many small-scale farmers would fall into the Government's official poverty category. For most years during the 1970's more than half the farm population's income came from nonfarm sources.

Such figures have raised Congressional eyebrows in Washington. So, as the 1981 Farm Bill debate nears, policymakers are taking a hard look at farmers' finances as they seek ways to relieve the stresses on America's largest and most successful industry.

While at first glance the farmer appears to be underpaid, complexities lurk beneath the surface.

A recent study by USDA's Milton H. Ericksen and A.L. Frederick of Kansas State University provides an overview of major financial considerations that face policymakers.

Per Capita Income

While farm people continue to draw less income, on the average, than nonfarm Americans, that gap has closed considerably in recent years.

In the 1930's, farm folks' per capita income was less than 40 percent of that for nonfarm people. That percentage reached 50 percent in the 1950's, 70 percent in 1966, and 91 percent in 1978. Throughout the 1970's, the figure stayed at or above 80 percent.

Regardless of such progress, a disparity still exists. Programs designed to provide farm-nonfarm income equity have a serious hitch—raising farm income may not help the farm people who most need help.

The problem is that small-scale farmers, who are most likely to tred closest to the poverty line, depend far more on nonfarm income than on farm income. The opposite is true for larger farmers who, though the minority, earn the lion's share of net farm income.

In 1978, for example, the 1.8 million farms with annual sales of under $20,000 earned about $5 billion in net farm income and some $27 billion in nonfarm income overall. Less than a fifth of their total income came from the farm.

On the other hand, the 577,000 farms with sales of $40,000 and over earned nearly $18 billion in net farm income in 1978 and slightly over $4.5 billion in nonfarm income. Over three-fourths of their total income came from the farm.

This means that programs that ignore off-farm income while boosting farm income may help the already-prosperous farmers much more than those who are struggling to get by.

Income figures by no means constitute the only measure of farm financial well-being.

Capital gains, while not realized until assets are sold, contribute greatly to the overall wealth of farm people. Since 1960, about 87 percent of the capital gains in agriculture have been due to rising farm real estate values. And since 1970, capital gains have topped total net farm income each year.

But these 'on-paper' gains in wealth do not provide ready cash for farm and family expenses. Escalating operating costs continue to pinch farm incomes, and many farmers may be living out the adage, "live poor, die rich."

Even so, capital gains offer a break because they're taxed at a lower rate than ordinary income. And, when the farmer goes to his banker for credit, appreciation of capital assets provides security for loans, increased leverage to purchase more land, and a nest egg for retirement.

Returns To Resources

Another way of gauging farm finances is to add net income and capital gains to derive a return on investment figure.

Since 1960, net income earnings on farm equity capital have averaged about 4 per cent per year. But when net income and capital gains are combined, the rate of return on equity jumps to 12 percent annually — about double the rate of return on common stocks, including dividends and capital gains since 1960.

While some may argue that farming's risky, erratic earnings from year to year justify this higher average, common stock returns show even greater year-to-year variation.

But, once again, the picture is clouded by the question: Which farmers are you talking about? Most of the increase in asset values is due to rising land value, but not all farmers own land and, even among those who do, large holdings are concentrated in the hands of a small minority.

Moreover, some farmers have cash flow problems because their operations don't produce enough cash to meet operating and family expenses. This is especially true of recent entrants into farming who must pay off land purchase debts in addition to operating expenses.

Since programs that boost returns for given commodities also raise the value of farmland and other assets associated with producing them, established owners benefit most.

It's difficult to raise the cash income of recent entrants to farming and who own no land without adding to the value assets held by established farmers. By pushing up such values, such a program would make new entry even harder.

A measure of farm financial health is the limited failure rate. There's indication that the foreclosure rate for farmers is about the same as for other businesses, less than 1 out of 200 annually.

But many farming operations make minimal profits, even if foreclosure does not occur. Government programs to fend off foreclosures, such as stepped-up credit programs, may reduce such failures. But they would not address the core problem of inadequate incomes and resource returns.

One of farming's facts of life is the year-to-year income instability. After a record farm income of $33.3 billion in 1973, farm income fell for 3 successive years to $18.8 billion in 1976. Since then, farm income has again been on the rise, with 1979 income expected to be near the record $33 billion again.

Income variation among the different agricultural sectors is even more dramatic. While total farm income rises and falls from year to year, a farmer's share of that total income varies with the type of product produced.

In 1972, crop receipts comprised 42 percent of total farm receipts, rising to 55 percent in 1974. Meanwhile, livestock receipts dropped from 58 to 45 percent in that period. Thus cattle producers suffered heavy losses while crop farmers enjoyed relative prosperity. And, during the next 2 years, the roles reversed.

The new-entry farmer faces still another economic enemy in the form of inflation. While established owners may benefit from inflation-boosted land prices, the cost of getting started is soaring.

Even established farmers are at a disadvantage, however, in inflation for inputs. While input suppliers can boost prices to cover inflation costs, the farm sector cannot respond as quickly.

Fair share

(Continued from Page C28)

This aggravates the long-standing problem for beginning farmers of surviving lean early years. Partnerships, part-time farming, renting and leasing, and off-farm jobs are being used by new farmers to stay afloat.

While the general financial factors discussed dominate farm finances, income problems tend to vary by commodity mix, geographic region, size of business, tenure, and operator age. Obviously, variation in financial situations occur within each of these categories.

Commodity mix is a key income factor. Some commodities, such as fruits, are grown under production contracts that set prices in advance, thus limiting but assuring a return. Others are protected by Government price supports to stabilize prices.

Some farms seek stability by diversifying. But many producers opt for economics of scale by concentrating on one commodity, even while recognizing its cyclical pattern offers feast or famine years.

Regional variations are considerable, due to farm size, soils, commodities produced, and weather patterns.

Farm net income in 1978 ranged for $56,706 in Arizona to only $811 in West Virginia. Arizona's high per capita income figure comes from the dominance of the relatively few large irrigated farms that dominate that State's agriculture. West Virginia, on the other hand, is characterized by relatively small, part-time farming operations.

This geographic variation also relates to still another important element: variation by size or volume of business. Many farms, especially large farms, can do well without price and income support programs. But on the other hand small farms often cannot benefit much from programs that tie benefits to the quantity of a given commodity produced.

In between the large-small extremes, operators of medium-sized farms may face the worst squeeze of all. They are often less free than small farm owners to supplement their incomes with off-farm work. Yet they don't have the economic muscle to bargain for discounts on major inputs or price premiums for their produce. Some experts contend that these are the farms most in need of price and income support programs.

Farm owners aren't the only ones in need of help. Tenants and part owners still hold a significant number of farms, despite a decline in tenant farms from 42 percent of all farms in 1935, to about 11 percent in 1974. During that period, the percentage of farms operated by full owners rose from 47 to 63 percent, while those operated by part owners increased from 10 to 26 percent.

Part owners, who both own and rent land, control most U.S. farmland and produce the highest value in products sold. The part ownership increase in the 1970's reflected a painful dilemma for some farmers: While unable to justify buying land from a cash flow standpoint, ownership offered considerable benefits in current and potential capital gains.

A final factor is operator age. Young farmers tend to have a higher debt-asset ratio than older, more established farmers. Thus younger farmers, who still face large debts they incurred in getting started and a lower accumulation of assets in such capital items as land and equipment - are more likely to face cash flow problems. In other words, farmers nearing retirement are far better able to expand than young neighbors who have the energy and ambition to do so - but who lack the means to come up with the necessary money.

In devising future programs and policies, Government officials must balance these and other factors if they are to succeed in strengthening the position of the types of farmers who most need help—the young and new entrants, the medium-sized full-time operators, and the small farms.

Two great offers on new Case agricultural tractors

CASH REBATES UP TO $5000 OR 14% A.P.R. FINANCING PLUS CASH REBATES UP TO $2500

For a limited time only take your choice of two special incentive plans for buying a new Case tractor *now.*

Cash rebates up to $5000.00 or 14% A P R financing ***plus*** cash rebates up to $2500 00

14% A.P R. financing plus rebate· You will be offered 14% Annual Percentage Rate(A P R) financing on your new tractor purchase, plus the generous rebate indicated at right for each eligible model, if your tractor is financed with J I Case Credit Corporation NOTE This special rate does not apply in Montana, Arkansas, Washington and West Virginia

Offers available at participating Case dealers

Eligible Models (new units)	14% A P R plus rebate	Rebate only
885 990 995 1210 1410	$1000	$2000
2090 2290	$1500	$3000
2390 2590	$2000	$4000
4490 4690 4890	$2500	$5000

Your rebate check will be sent direct to you from the Case Company or, you can apply the rebate towards your down payment NOTE Government Agencies/ Departments do not qualify for rebate

Models 885, 990, 995, 1210 and 1410 14% A P R up to 36 months
Models 2090, 2290, 2390, 2590, 4490, 4690 and 4890 14% A P R up to 48 months

both new tractor offers valid

May 1, through June 30, 1980

Example of special 14% A.P.R. financing on purchase of new selected Case tractor:

Cash price of tractor	$47 500
Down payment cash and/or trade-in	9 500
Amount to be financed	$38 000
Annual Percentage Rate	14%
Number of payments	four
Due dates/periods	Ends of 12 24 36
payments	and 48 months
Amount of each payment	$13 041 78
Finance Charge	$14 167 12
Total of payments	$52 167 12

Special waiver of finance charges on all used agricultural tractors.

If you buy a used agricultural tractor of any make from a participating Case dealer and finance it through J I Case Credit Corporation we ll waive finance charges for six (6) months from date of purchase Offer valid on tractors purchased during the period of April 1 1980 through June 30 1980

Berks County FFA holds awards banquet

ELVERSON — About 130 persons attended the annual Berks County FFA Banquet at the Kutztown Grange which marked the culmination of a year's effort for the Berks FFA officers.

Following a ham dinner, Barry Ziegler and Cheryl Adams presented the 1979-80 Berks Co. FFA degree recipients from each chapter. Degree winners were; Kevin Zimmerman, Susan Gromis, Rodney Salem, Henry Noss and Tim Deamer all from Conrad Weiser; Steve Shaw and Scott Hausemen of Oley Valley; Bruce Latshaw, Keith Flicker, Dean Shoemaker, Carl Lutz, Gerald Haas, Timothy Behm, Bill Zollers and Keenan Hilbert from Kutztown; Laura Miller, Barry Ziegler, Troy Luckenbill, Gary Parker and Ron Swope of Tulephocken; also Thomas Wolfe, Martin Miller, Sue Ford, Linda Robinson, Jodi Yohn, Steve Kearns, Mike Williams, Brett Strough, Donna Devine, and Mike Ott from Twin Valley.

Steve Miller and Ken Heimbach, president and treasurer respectively of the Berks County Ag Teachers Association then presented trophies to winners of county and area contests. Dairy Judging trophies were presented to Scott Hauseman, Oley Valley and Tim Kurtz and Steve Snyder of Twin Valley. Gerald Haas of Kutztown received a trophy for first place in the area agronomy contest. Area contest trophies were also presented to Linda Robinson for pleasure horse, Donald Kercher for dairy foods and Donna Devine for meats. All three students are from Twin Valley

Other trophy winners were. Dean Bruno of Kutztown, ag mechanics; senior basket ball team, Kutztown; junior basketball team, Conrad Weiser; senior and junior volleyball teams, Conrad Weiser FFA; general public speaking — Steve Imes, Oley; Debra Miller, Conrad Weiser and Mike Mertz, Kutztown. In extemporaneous speaking, trophies were presented to Howard Griest of Twin Valley and Bruce Latshaw and Richard Hershberger of Kutztown. Conservation speaking contest trophies went to Steve Kearns and Roger Stoltzfus of Twin Valley and Bruce Latshaw of Kutztown. Trophies for the first place chapter scrapbook and first place parliamentary procedure team were also presented to the Twin Valley Chapter

Charles Suloff, representing the Berks County Production Credit Association presented the county PCA award to Ernest Gelsinger of Conrad Weiser, with the Central Eastern Pennsylvania region award going to Dean Bruno of Kutztown These awards signify excellence in records of farming programs.

Bruce Latshaw and Ernest Gelsinger presented certificates of appreciation to Mary Ann Rimby, chairman of the Berks County Conservation District, who has served as a judge for the county public speaking contest for several years; Mr and Mrs. David Steigerwalt who hosted the area pleasure horse judging contest; and Mr. and Mrs Lester Gelsinger who hosted the land judging contest.

The County officers then conferred the honorary county degree upon Heindel Farms which hosted the area dairy judging last fall; Duane Pysher, who has officiated the land judging contests in his capacity as Berks County soil conservationist; Kenneth Heimbach, vocational agriculture teacher at Kutztown High School; and Stephen Miller, vocational agriculture teacher at Conrad Weiser high school

Lewis Kohl, county treasurer, then recognized the following star chapter greenhands: Scott Troutman, Conrad Weiser; Todd Miller, Hamburg; Mark Latshaw, Kutztown; Phillip Levan, Oley; William Lesther, Tulpehocken; and Pan Trostle, Twin Valley Star greenhands are the top first year FFA members as selected by their respective chapters.

Kohl also recognized Star Chapter farmers and agribusinessmen by presenting them with a fifty dollar savings bond each Star Chapter farmers are those members chosen by each chapter for their outstanding farming programs and leadership. Following are the 1980 star chapter farmers; Henry Noss, Conrad Weiser; Allan Rohrbach, Hamburg; Dean Bruno, Kutztown; Scott Hauseman, Oley; Penny Bicksler, Tulephocken; and Goward Greist, Twin Valley. Star Chapter agribusinessmen chosen for their outstanding agribusiness projects were Debbie Miller, Conrad Weiser; Keith Flicker, Kutztown; Steven Imes, Oley; Barry Ziegler, Tulpehocken; and Thomas Kirk, Twin Valley.

Harvey Smith, vocational consultant for the Pennsylvania Department of Education named the Berks County Star Farmer for 1980 - Howard Greist of Twin Valley and the Star County Agribusinessman - Steve Imes of Oley. He also introduced the 1980 Keystone farmers, Anthony Eberly, Pennsylvania FFA Eastern regional vice-president spoke on behalf of the Pennsylvania FFA.

Free newsletter available to dairy goat owners in Montgomery County

NORRISTOWN — The Montgomery County Extension Service is seeking to identify county dairy goat owners, whether they own one goat for home milk production or have a larger herd for commercial purposes

County Agent Nancy Kadwill is coordinating a Dairy Goat Newsletter that would cover educational programs of interest to goat owners, give management tips and announce events such as clinics, shows or sales Anyone with an interest in this free newsletter should write to Nancy Kadwill, 400 Markley Street, Norristown PA 19401 and indicate their involvement with goats, the type of programs they would like to see, and their complete name and address

Boys and girls ages 8 - 19 years old who are interested in goats are invited to join the 4-H Dairy Goat Program There are clubs meeting in the Boyertown and Harleysville areas Members and parents learn more about goat care, health, uses of milk, judging and showing in addition to making new friends and being involved in the numerous activities in 4-H

For more information call the Extension Service at 215/277-0574

Montgomery County DHIA Monthly Report

April, 1980

The herd of W B Saul High School had the highest daily butterfat average This Holstein herd of 14 cows averaged 54 1 pounds of milk, 2 29 pounds of butterfat with a 4 2 percent test

The herd of Merrill G Ruth placed second This Holstein herd of 59 5 cows averaged 60 3 pounds of milk, 2 06 pounds of butterfat with a 3 4 percent test

Noted among 305 day lactations were Susan owned by Richard A Bechtel, producing 19,967 pounds of milk and 818 pounds of butterfat Carol owned by Gordon Moser, producing 17,934 pounds of milk and 767 pounds of butterfat, Pearl Of Du Mar Farm, producing 20,811 pounds of milk and 665 pounds of butterfat, cow #148 owned by Maynard Rothenberger, producing 20,388 pounds of milk and 693 pounds of butterfat, and cow #613 of Hy-Vue Farms, producing 24,172 pounds of milk and 801 pounds of butterfat

Legislation introduced to stop garbage-feeding swine

DES MOINES, Ia. — Legislation has been introduced in the U.S. House of Representatives and Senate to prohibit the feeding of garbage to swine unless the garbage has been processed to destroy disease causing organisms.

The legislation, S2162 and HR 6593, has the support of the National Pork Producers Council, which considers these bills very important at this time because of the threat of African Swine Fever entering the U.S.

ASF is present in the Dominican Republic and Haiti and recently reoccurred in Cuba. While Cuban officials have announced it has been eradicated and there is an active eradication program in the Dominican Republic, the disease remains unchecked in Haiti. The large number of refugees coming from Haiti to Florida is cause for special concern, C. Donald Van Houweling, NPPC Director of Government Affairs.

ASF is spread through scraps of meat from infected or carrier swine that get into garbage which is later fed to swine. Therefore, it is essential that garbage be heated to a temperature high enough to kill the infecting organisms, since there is no known cure or vaccine for the disease.

"While this legislation will not prohibit the feeding of garbage, as NPPC would have preferred, it is important for the U.S. government to be able to support the states in the regulation of garbage feeding," Van Houweling said. Some states have laws which prohibit feeding garbage to swine, he explained.

"The bills do not preempt those state laws which prohibit garbage feeding, but provide for the state and federal governments to cooperate in the enforcement of laws and regulations on ASF," he said.

If ASF did enter the U.S., the cost of eliminating the disease, even from a small area, is estimated at $7.3 million. If the disease became widespread and took ten years to eradicate, total cost could be $5 billion, according to a University of Minnesota study. ASF would also cause increased consumer prices for pork and a loss of pork exports.

"Now that there is action in both houses, the chances for this legislation to be enacted this year are greatly improved," Van Houweling said.

"With the indication other major farm organizations besides NPPC, are supporting these bills, it does not seem likely there will be significant opposition," he concluded.

Soil resource map from Penn State

UNIVERSITY PARK — Locations and descriptions of 153 soil groups in Pennsylvania are available in the form of the Land Resources Map of the Commonwealth, published by the Agricultural Experiment Station at Penn State

Presenting land resources in graphic form, the map is unlike anything published previously for Pennsylvania It brings together factors of soil depth, drainage, available moisture, and productive capacities of soils.

Multiple patterns and colors are used to portray the 153 soil groups—coded and symbolized for identification. Each soil unit or group is evaluated by 16 characteristics. The more important characteristics are depth, soil drainage environment, geological source of soil material, available moisture, planting rooting zones, and dominant crop production.

Copies are available for the $3.25, including tax and postage, from Land Resources Map, Box 6000, University Park, Pa. 16802. Make check or money order payable to The Pennsylvania State University.

Solar grain drying guide available

COLUMBIA, Mo. — A new handbook on the use of solar energy and grain drying is now available.

"Low Temperature and Solar Grain Drying" was prepared under the direction of the solar energy subcommittee of the Midwest Plan Service.

Copies can be ordered singly or in quantity from the Department of Agricultural Engineering, University of Missouri, Columbia, MO 65211.. or through any county extension office in the North Central United States. Cost is $3 each.

TOBACCO GROWERS WARNED

Use Ridomil® 2E fungicide for control of blue mold

What is Ridomil

Ridomil is a new type of soil applied systemic fungicide that effectively controls two major tobacco diseases black shank and blue mold

Ridomil is taken up by the roots and provides systemic action destroying the disease causing fungi both in the plant and in the soil

Ridomil is registered for the control of black shank on flue-cured tobacco and blue mold on all types of tobacco

How Ridomil works

Ridomil is absorbed through the plant's roots and moves with the plant sap throughout the plant

Translocation from the soil through the roots to all parts of the plant is more rapid than by leaf absorption It is for this reason that soil treatment is recommended

ORDER RIDOMIL NOW, SUPPLY IS LIMITED!

Ag society honors Best of New Holland

UNIVERSITY PARK — Gamma Sigma Delta, the honor society of agriculture, cited outstanding alumni, faculty, and students during the chapter's annual banquet held recently at Penn State.

Alumni honored for attainments, and taken into membership, were Albert M. Best, Director of Research for Sperry New Holland at New Holland, and Robert H. Hodge, owner of Highland Orchards, Inc., of West Chester.

A graduate of the class of 1942, Best is president of the American Society of Agricultural Engineers. In 1979 he led a delegation of engineers on a 21 day and 5,000 mile trip to exchange mechanization technology with industrial leaders of China.

At Sperry New Holland he has overall responsibility for developing programs to improve existing equipment and for providing data to support recommendations on new equipment.

In the class of 1956, Hodge owns and operates Highland Orchards, along with his family. The farm orchards and roadside market are diverse, large, and successful.

With the exception of apples and peaches, nearly 100 per cent of the fruit, sweet corn, and other vegetables are marketed at the 600 acre farm. The "pick your own" system markets strawberries, peaches, nectarines, grapes, and other crops.

A former Pennsylvania Outstanding Young Farmer, Hodge was named a Master Farmer in 1980.

Honored for exceptional service in research with the College of Agriculture was Earl M. Kesler, professor of dairy science. His research with high-producing cows was described as "setting a standard for other studies throughout the world."

His findings in calf nutrition have led to modern feeding programs used today. Some of his innovative work includes use of waste milk for feeding calves, production of veal with milk replacers, and protein and energy levels for high producing cows.

Honored for outstanding teaching was James H. Mortensen, associate professor of agricultural education. He is responsible for Penn State's undergraduate program for young peole planning to teach vocational agriculture.

Cited for achievements with the Cooperative Extension Service was Richard S. Adams, professor of dairy science extension. He is considered to be a national authority on feeding dairy cattle for maximum milk production. The large increase in milk production per cow in Pennsylvania since 1960, it was stated, has been influenced by his teaching and writing.

Lori F. Fehr, of Pine Grove, received the senior scholarship award. Fehr is majoring in horticulture.

The junior citation went to each of three students, Kathleen J. Schiever of R.D. 2, Harmony; Marie I. Weber of St. Clair; and Laura L. Weinberger of R.D.1 Clinton. Schiever is majoring in dairy production while both Weber and Weinberger are majoring in animal bioscience.

Russell C. Lloyd of Perkasie won the sophomore scholarship award. Lloyd is majoring in general agriculture.

Faculty members initiated into Gamma Sigma Delta were Richard H. Fox, associate professor of soil science; Robert O. Herrman, professor of agricultural economics; Roland M. Leach, professor of poultry science; David R. MacKenzie, associate professor of plant pathology; and Richard F. Stinson, professor of agricultural education and horticulture.

Elected officers for 1980-1981 are: president, John H. Zeigler, professor of meat science; vice-president, Marion R. Deppen, assistant director of the Cooperative Extension Service, Capital Region; secretary-treasurer, Thomas L. Merritt, professor of animal science; and historian, Samuel H. Smith, head and professor of plant pathology.

Penn State alumni honored for achievements and initiated into Gamma Sigma Delta honor society of agriculture recently, were Albert M. Best, left, director of research for Sperry New Holland at New Holland, and Robert H. Hodge, center, owner of Highland Orchards, Inc., of West Chester. They are shown with Milton C. Hallberg, right, retiring president of the society.

Close mowing is murder on lawns

LITITZ — The height you mow may very well determine the life of the grass in your lawn. Mowing the Kentucky bluegrass/red fescue type lawn closer than 1½ inches gradually weakens and eventually kills the grass. The end result is a thinned out lawn infested with a variety of weeds.

Close cutting neither looks more attractive nor lessens the number of times a lawn must be mowed. Evenness of cut rather than closeness makes a lawn attractive. Close cutting does not permit the lawn to manufacture the food it needs for building strong deep root systems and a dense sod.

For the Kentucky bluegrass/red fecsue type lawn, the mower should be set to cut the grass at a height of 1½ to 2 inches. This includes Merion Kentucky bluegrass. The 2 inch height is the most desirable height of cut during the year.

In contrast, certain types of lawn grasses are well adapted for close mowing. Zoysia should be cut at a height of one-half to 1 inch. Mowing is necessary for a properly groomed lawn. Be kind and considerate of the tolerance of the grass. Give it a chance with a properly adjusted and sharp-bladed mower set at the correct height.

BUY A STIHL® 015 AV AND GET ELECTRONIC IGNITION FREE.

The Stihl 015 with its built in Anti Vibration system is a bargain at any price But by buying one now you ll also get a free no maintenance never out of adjustment no moving parts high voltage Electronic Ignition system for even faster starts and more dependable woodcutting

Lancaster 4-H Sheep Club announces schedule

LANCASTER — The Lancaster County 4-H Sheep Club has been busy organizing activities for the coming year. Monday, May 19, Barb Herr will demonstrate shearing and worming at the home of Jim Stauffer.

Other dates listed for the coming year are: June 18 — Wool Pool experience, Cumberland County, tentative; July 21 — ice cream party and judging demonstration as well as a sheep bowl with Chester County at Ann Rohrer's Quarryville.

August 18 — grooming and showmanship demonstrated by Sarah Brubaker at Clyde Brubaker's. September 15 — Clair Engle, Penn State sheep specialist will address the group at the Farm and Home Center. October 20 — Halloween costume party with York County at Barb Herr's, Narvon. November 24 — meeting at the Farm and Home Center with bowling after the meeting. December 15 — Christmas party at the Farm and Home Center and caroling.

In addition to the activities listed, the group plans several special events including chicken catching as a fund raising activity. For more information on the club or the events, contact Jim Stauffer 717/872-5591 or Clyde Brubaker 717/898-8984.

Sheep Club officers for the coming year are shown front from left: Sarah Brubaker, Wayne Hess, and Barb Herr. Back from left: Machele Shuey, Gerald Rohrer, John Mast, Missy Esh and Liz Chapman. Not pictured are Jim Stauffer and Monica Esh.

Sheep Club leaders for the coming year are shown from left: Ann Rohrer, Clyde and Dorothy Brubaker.

Which-Way 4-H Club performs skits

HELLERTOWN — Which-Way 4-H Club held its recent meeting at the Grundy House for the "Help Young America" 4-H program.

Two skits were performed for the residents of the home. They were Hassle in the Cassle, a messed up version of Sleeping Beauty and The Strange Truth of Mother Goose, a goofy Mother Goose story.

A bake sale with Spurs n' Burrs and the Cooks Creek Watershed Association was held. While they sold trees, we sold cupcakes, coffee and other baked goods. The Which-Way 4-H club made a profit of $25.

The Cooks Creek Watershed Association also was assisted by the club planting Willow trees.

The local Lions' Club asked the Which-Way and the Spurs n' Burrs to give a talk at their recent meeting on May 8. Three people from each club were chosen to represent the clubs.

It was decided to attend 4-H Sunday with the Spurs n' Burrs. In July we will try to go to the Grundy house to have a picnic and project demonstrations. A motion was also made by Robert Dunn to have a sponge throwing board at the Country Fair.

Ask the VMD

Leon Riegel Tim Trayer Edgar Sheaffer

Spring cleaning horse parasites.

A reader asks:

What would constitute a good general Spring worming program for horses?

P. Witmer, Willow Street

Dr. Sheaffer comments:

Spring is one of the most important seasons to treat horses for internal parasites.

Since many horses will be on some sort of pasture, it is beneficial to reduce the numbers of parasites in the horse before it is put out on fresh growing grass.

Spring worming is especially important regarding control of Strongyles, or blood worms, and Bots in horses over 6 months of age, and Ascarids, or large roundworms, in those under two years of age.

Strongyles and Ascarids spend part of their life cycles on the pasture. The infective larvae hide away on the fresh growing forage and move up the blades of grass in order to be eaten first. The parasite's aim is to get back into the host, in this case the horse, as soon as possible.

The adult Bot is a fly that looks like a dusty honey bee. The female fly lays her eggs on the hairs of the horse's front legs, chest, and neck during the Summer and early Fall.

The presence of the eggs causes puritis, or itching. The eggs are hatched by the warmth and moisture of the horse's breath when it scratches the itch with its teeth.

The larvae then migrate through the tissues of the head and neck, and winter over as imbedded pupae in the mucosa of the stomach.

I recommend worming for Bots in November, January, and then a third time in late March or April. For your own situation, consult with your veterinarian for recommendations on which botacide to use and how.

Several tube-type worming formulas contain a botacide. Be careful to closely follow directions on any over-the-counter preparations.

Fecal smears and flotations of fresh manure samples give a good indication of the quantity of Strongyle, Ascarid, and Pinworm infectation. Have your local veterinarian or nearby laboratory perform fecal examinations before your Spring worming.

By the way, I recommend treating every horse which will be using your pastures. Mature horses should be wormed every 4-8 weeks during the Spring, Summer, and early Fall. In general, foals, weanlings, and yearlings should be treated more frequently than older horses.

Work with your local veterinarian in setting up a program that is adequate for your stable.

Use many different formulas of worming compounds. It has been shown internal parasites, especially Strongyles, build up an immunity to the phenothiazines and the bendazoles. Therefore, I recommend alternating worming medications.

Here is a sample worming program that you can use year round.

January-February: Botacide paste or granules. Camvet or Telmin paste or granules for Strongyles, Ascarids, and Pinworms.

March-April: Tube worming by veterinarian with Dyres T F or Parvex +.

May-June: Topdress with Pyrontel Pomoate, Strongid T or Imthal.

July-August: Panocur oral liquid or granules, or any other related bendazole product.

September-October: Topdress with Strongid T or Imthal.

November-December: Tube worming by your veterinarian with a broad spectrum formula that is effective on all types of internal parasites.

Always be sure to follow the drug manufacturer's and your veterinarian's warnings on the administration of any worming medications to pregnant, lactating, sick, or young horses.

Meat store owner fined, jailed for bait and switch

WASHINGTON, D.C. — Richard M. Cerv, Alexandria, Va., former owner of a chain of freezer meat stores, has been fined $10,000 and sentenced to six months in jail after pleading guilty in a federal court to three counts of an indictment involving bait and switch operations.

Cerv pleaded guilty to violating an earlier U.S. Department of Agriculture order requiring him to cease and desist from bait and switch sales tactics. He also pleaded guilty to two counts charging wire fraud.

Bait and switch is the common name for the sales practice of luring customers with misleading advertisements of low-priced meat, then disparaging the advertised merchandise and switching the customers to higher priced items, an official with USDA's Agricultural Marketing Service said.

James L. Smith, AMS deputy administrator for the Packers and Stockyards program, said the wire fraud charges were based on use of a telecopier to transmit customer credit information which determined how much customers could pay for the more expensive meat.

The U.S District Court for the District of Columbia also placed Cerv under supervised probation for 2-½ years, requiring him to rpeort to the court with his probation officer periodically. He was also required to perform 300 hours of community service. Similiar sentences were given for each of the three counts, to run concurrently.

Gary A. Young, Mt. Solon, Va., a former manager of Cerv's stores, pleaded guilty to violating the USDA order and was fined $1,000 and placed on probation.

Among the freezer meat stores operated by Cerv were Dick's Butcher Shop outlets in Virginia and Maryland, Beefland Freezer Meats in the District of Columbia and Shenandoah Valley Meat Co., Elkton, Va.

In the order issued by USDA in 1977, Cerv and Young and their retail outlet, Meat Masters, Inc., were fined $5,000 and ordered to cease and desist from violating the Packers and Stockyards Act by engaging in bait and switch tactics.

The P&S Act is a fair trade practices law. Smith said the law is designed to promote and maintain fair and open competition in the buying and selling of livestock, meat, and poultry.

Mathews equipment catalog available

CRYSTAL LAKE, Ill. — Mathews Company announces its all new 1980 Equipment Catalog with a full selection of grain drying, storage & handling equipment, as well as M-C flail equipment.

The catalog contains informative articles with energy-saving ideas to help equipment users meet the challenge of the 80's. Of special interest is the Mathews DRYBINE (TM) continuous in-bin dryer. Its energy-saving design represents a new generation of grain drying technology. Complete details are in the catalog.

Grain dryers, bins, legs, augers — everything needed to set up or complete an energy efficient grain handling system — are covered in the new catalog.

The full-color, 72-page catalog is available through any Mathews Company dealer, M-C Agri-Mart or by writing or calling Mathews Company, Box 70, Crystal Lake, IL 60014.

Methyl gets clearance

ST. LOUIS, Mo. — Clearance has been issued by the Environmental Protection Agency for the addition of grasshopper control in corn, alfalfa, barley and oats to the label of methyl parathion.

A major advantage of using the restricted pesticide, according to Tom Helms, entomologist for Monsanto Agricultural Products Co., is its quick contact activity.

"When the grasshoppers begin hatching in late May and early June, farmers need control on contact and methyl provides this quick action," he said.

Egg trading increases

DURHAM, N.H. — Egg Clearinghouse continued its record-setting trading pace in April even though participation in the public trading forum slowed compared to other months. Trading for April was 45 percent greater than for the same month of 1979 and was only slightly less than the month's record set in 1977.

Frank Koebrich reported 59,520 cases, representing 71 sales, were traded in April. The approximate value of the eggs totalled over $850,000. Some 117 firms participated in the trading, he said.

After-Easter uncertainty contributed to the slower movement of eggs through E.C.I., Koebrich noted. It appeared that buyers were seeking greater values as bids averaged 3.9 cents under trading for Class 1 and Extra Large eggs. Sellers appeared to be testing the public market with average offerings higher than prevailing bids.

Meanwhile, trading volume for the first four months of 1980 surpassed the one-third mark enroute toward topping the million-case trading goal. April's trading put the volume figure at 336,348 cases — more than 48,000 cases ahead of trading for the same period last year.

There were many unfilled opportunities for trading during April, Koebrich reported. Open bids totalled 716,235 cases and open offers totalled 407,412 cases.

Seminar held

PRINCETON, N.J. — Six sales personnel from Pennfield Corporation, Lancaster, recently participated in a Cyanamid customer sales training seminar.

Attending the three-day seminar were Elwood N. Earhart, Stephen M. Leiser, Russell C. Latshaw, Noah Gehman, Earl B. Gerlach, and John L. Renshaw. Training sessions dealt with effective listening, selling skills, time and territory management, defending the price and telephone techniques.

Chemicals approved for blue mold

ANNAPOLIS, Md — Md. Sec. of Agriculture Wayne A. Cawley, Jr. says the state's tobacco growers will have several new chemical weapons in their arsenal against "blue mold" this year should the mold reoccur.

"The State Chemist Section of MDA has reviewed and approved applications for 'Special Local Needs' registrations to allow use of the fungicides "Maneb" and "Zineb" on tobacco fields in Maryland," Secretary Cawley said

"In addition, a combination product of the two chemicals, known as "Manzate" has also been approved for use on Maryland tobacco fields by the 'SLN' registration process.

"These chemicals have been recognized as effective against the blue mold fungus and have been approved for use on tobacco plant beds for several years. Now they are registered for use on tobacco fields in Maryland.

"Applications from the manufacturers of the chemicals were reviewed expenditiously by representatives of the University of Maryland and the MDA who recommended that MDA grant SLN use authority under terms of Section 24-C of the Federal Fungicide, Insecticide and Rodenticide Act (FIFRA). The action taken by MDA applies only for use in Maryland in this case.

"Tobacco growers interested in using these chemicals on their fields should contact their county Agricultural Science Extension Agents for specific details and information.

Sales meeting held

LANCASTER — Thirty sales personnel from Case Company dealerships in Pennsylvania, New Jersey, Delaware and Maryland attended a product training program at the Lancaster Treadway Inn on Tuesday, May 13.

The day-long session, which continued from 9 a.m. to 3 p.m., included training dealing with Case two-wheel and four-wheel drive tractors.

Soybean Assoc. membership grows

ST. LOUIS, Mo. — A concerted effort by soybean growers to increase membership has resulted in the largest net increase in new members in the last two years according to American Soybean Association Membership Chairman B. B. Spratling of Roba, Alabama.

"We've gained over 1,000 new members so far this year," says Spratling. He attributes the increased interest in soybean association membership to events such as the soybean embargo and to increased efforts by soybean growers to bring new members into the organization.

Spartling thinks the increased membership efforts were also encouraged by this year's ASA membership contest sponsored by Mobay Chemical Corp.

"Mobay is offering an expense-paid, five-day trip to Mexico for 20 soybean growers and their spouses to see ASA market development activities in progress there," says Spratling.

Trip winners will include the 10 soybean grower members who sign the most new members between January 1 and June 5, 1980. In addition 10 new members and their spouses who signed during the same time period will be selected at random to participate in the tour.

"There is still time to enter the contest," says Spratling who points out that official contest varification forms will be accepted until June 5.

Spratling reports that soybean producer Vince Drendel of Evansville, Wisconsin, who is credited with over 70 new members, is the current leader in the competition.

Others who have made outstanding efforts include: Hollis Littrell of Martin, Tennessee; Rolland Doucet of Lafayette, Louisiana; Jimmy Kemp of Rohwer, Arkansas; Ward Scott of Farragut, Iowa; Thomas Wells of Fonda, Iowa; Vince Davis of Nemaha, Iowa; Reuben Berkland of Fenton, Iowa; Buck Hill of Decatur, Alabama; Paul Newton of Sylvania, Georgia; Jay Legvnold of Eagle Grove, Iowa; Dennis Berger of Wellman, Iowa; Bob Crotty of Pocahontas, Iowa; Keith Iverson of Paullina, Iowa; Bob Niemi of Clear Lake, Iowa; and Jim Young of Galva, Iowa.

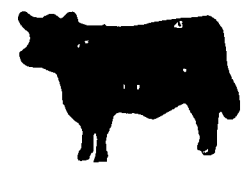
Asian markets sought

TOKYO — Hendrick Wentink, export consultant for the American Egg Board and the nation's egg producers, attended the U.S. Red Meat, Poultry and Fish tradeshow in the U S Trade Center at Ikebukuro, Tokyo, to promote development of Japanese and Southeast Asian markets for eggs, egg products and spent fowl.

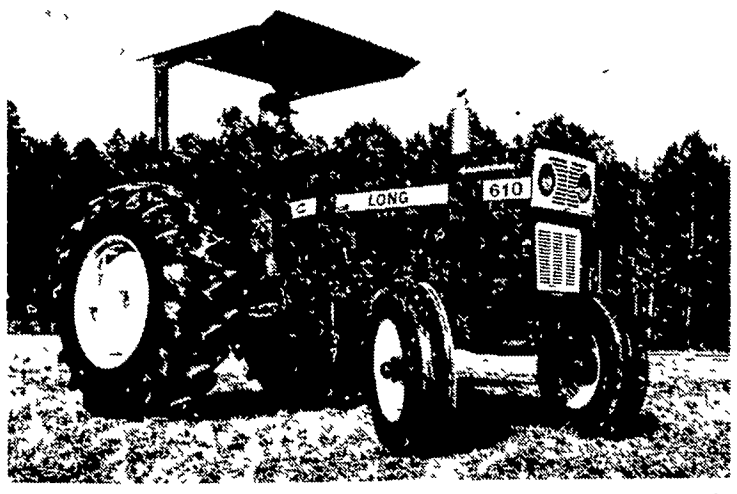
Wentink, of 1144 Fairview Ave, Wyomissing, is a former AEB board member and consultant to the Export Committee The American Egg Board is chartered to promote and develop markets for eggs, egg products and products of spent fowl through consumer, food service/institutional and educational channels in the U S, and throughout the world. The AEB Export Committee participates in foreign trade commissions in this activity

Wentink reported an enthusiastic interest on the part of Japanese and Far East food importers and distributors of American-produced eggs in fresh, frozen and dried product form to meet a growing demand by Asiatic consumers for a greater diversity of diet and nutritionally balanced meals prepared with eggs

Methods and programs of the AEB used in the United States to promote nutritional values of eggs, involving television, radio, newspapers and magazines, and specialized segments of the American public, were of particular interest to the tradeshow visitors, Wentink reported.



LONG 610DT
4 WHEEL DRIVE TRACTOR



All Purpose Four Cylinder Diesel Agricultural Tractor

The Long 610-DT is a four-wheel drive version offering added traction for those tough operating conditions. Less wheel-slippage means more economy plus added efficiency. Ideal for plowing, loading, disking and hauling. It adds up to efficiency with more weight per dollar than any other tractor in its class, that we know of.

Feed dealers and grain buyers to meet in Ephrata

EPHRATA — More than 100 Pennsylvania feed dealers and grain buyers are expected to be on hand for an annual pre-harvest outlook meeting sponsored by PennAg Industries Association. It will be held June 30, beginning at 6 p.m. at Lancaster's Treadway Inn.

This year's speaker will be J. L. Baumgardner, vice-president and director for grain operations at Ralston Purina's headquarters in St. Louis, Mo.

Speakers and their listeners will discuss market directions in light of the most current information on domestic and foreign crop conditions, transporation, storage, government programs and statistics.

Farm tour held

BALTIMORE, Md. — In their continuing effort to keep up to date on farming operations, the Board of Directors of the Farm Credit Banks of Baltimore recently completed their 16th annual spring tour.

The Baltimore District of the national Farm Credit System makes loans for agricultural purposes in Delaware, Maryland, Pennsylvania, Virginia, West Virginia, and Puerto Rico. This year's tour took the Board to farms and agricultural cooperatives in the southeastern quadrant of Pennsylvania.

Family-owned farms visited included such diverse operations as orchards and dairy, hog, turkey and mushroom farms. The Board also visited milk, fruit, and mushroom processing cooperatives.

Stops along the way enabled the District Board to meet with the General Managers and Directors of several of Pennsylvania's Farm Credit Associations, and with agricultural educators at Penn State. These meetings provided the tour participants with further insight into the state's agricultural environment and credit needs.

The Board currently plans to tour parts of Virginia in the spring of 1981.

Pact renewed

CHICAGO — International Harvester Company and Steiger Tractor, Inc., Fargo, have announced renewal of their manufacturing agreement.

Under the agreement, which extends present production activities and becomes effective November 1, Steiger will continue to produce International Harvester's high horsepower tractors for two more years.

Steiger Tractor, in which International Harvester holds 36 percent equity ownership interest, has produced several four-wheel drive tractor models for International Harvester since 1973. Under the contractual agreement, Steiger will continue to produce International Harvester four-wheel drive tractors of 230, 300, and 350 engine horsepower to International Harvester's specifications.

New planting tools described

DES MOINES, Ia. — Full-color brochures are now available from dealers describing Massey-Ferguson's new MF 440 row crop cultivator, the 640 row crop planter and the 320 mounted disc harrow.

The 440 cultivator sizes range from two to 12-row with vibrating Danish tine shanks. The two through eight-row models come in 30 and 40-inch row spacings and the 12-row model is equipped in 30-inch row spacings.

The 640 planter comes in both four and six-row models, with 30 to 40-inch row spacings. A key feature is single seed selection by low volume air pressure, ensuring less seed damage and uniform planting.

The 320 harrow is available in seven rigid-frame models and three fold-over models. Rigid-frame disc widths vary from six to 10½ feet, and fold-over models from six to 7½ feet.

Brief answers to short questions

Sheila's Shorts

By Sheila Miller

What time is it?

Did you ever notice how people seem to perk up every Spring. Just as soon as there are a few hours of daylight after the supper dishes are cleared away, you find people outside again, mowing their lawns, working their garden plots, or just soaking up those last weak rays of sunshine.

And every year, on the last Sunday of April, people do a little clock work in celebration of the longer days. They adjust the hour hands on their time-marking machines to point one hour ahead.

To most people, this is a time when they claim to lose an hour's sleep. For some, it's an extra hour of work time.

Some remember which way to move the hands on Micky Mouse watches by reciting "Spring ahead, Fall back". And some forget about it altogether until they show up an hour late for church, just as everyone else is leaving.

What creates this phenomenon of extra evening hours filled with sunshine, commonly known as daylight savings time?

One of our readers asked us to find out.

I talked to a friend about daylight savings time and he thought it was the farmer who had something to do with it. I thought it was the golfer.

Roland G. Kamoda
R1 Monongahela

I did some checking into this type of savings plan and found that it was set up to save time and money.

The plan was originally put into play during World War I by Great Britain as an economy measure for fighting the war on electricity consumption, along with the enemy.

Shortly thereafter, the U.S. followed in the footsteps of their ally and adopted the plan in 1918. The very next year, however, Congress cancelled the plan.

One World War later found daylight savings time again being used as an economical defense. Ever since that time, the use of daylight savings time has been the option of individual states and cities.

Although most people look forward to the extra hours of daylight for getting the field work done, the World Book Encyclopedia notes "daylight savings time is not suited for farm work schedules, and is not widely used in rural areas".

Not many of us living out in rural America would whole-heartily agree with the Encyclopedia's conclusion, but it just goes to show you, the plan wasn't formulated with the farmer in mind.

The only thing for sure is that daylight savings time gives us one more hour of work without electric lights than if our clocks went by the normal standard time.

The World Book Encyclopedia tells us that standard time in the U.S. came about as a result of the development of the railroad transportation network.

Before standard time was adopted, each town kept its own local time and trains ran on local sun times. The fact that Big Ben didn't chime consistently in neighboring towns created a lot of turmoil at the tracks.

As a result, the railroads of the U.S. and Canada set up their own time standard in 1883.

Their innovation won world-wide recognition and in the following year, a conference was held in our nation's capital to discuss the possibilities of having a world-wide time standard. Without any formal agreement, the world followed suit and set up Greenwich, England as the prime meridian.

In the same year as Congress established daylight savings time, they authorized the ICC to set limits for the time zones in the U.S.. This was the birth of Eastern, Central, Mountain and Pacific standard time.

Thanks for an interesting question, Mr. Kamoda. I would love to keep on writing about the history of daylight and standard zones, but I'm running short on time.

Scientists to study plants, water use

LUBBOCK, Tex. — A team of scientists hopes to find ways plants can grow more with scarce water so farmers can get bigger yields on hostile, semi-arid land.

Researchers of Texas Tech University and the U.S. Department of Agriculture will do the research. They will use $170,300 provided by the USDA's Science and Education Administration in an effort to get plants to use water more efficiently and cut down on irrigation costs in the dry Great Plains of the U.S.

Water is the main factor that limits increased food and fiber production in semi-arid areas.

Specifically, the scientists will try to boost the water-use efficienty of cotton and sorghum crops, said D. R. Krieg of Texas Tech, the principal investigator, and J. E. Quisenberry, team leader for the USDA.

Scientists on the team will approach the problem from different angles.

Quisenberry said that producing plants that merely survive is not enough; they also must make a crop. Hence, some of the scientists will investigate the way plants are built and how this affects their tolerance to water stress.

For instance, cotton plants have differently shaped leaves and roots, which, scientists believe, could prove important in producing a superior plant. Sorghum plants hold their leaves at different angles to the sun; this also may be significant.

Along with studying how plants react to water, cold and heat stress, the researchers said they will investigate the interaction of the plant with soil and air.

In short, the research is a multifaceted approach to a complex problem with a single goal—to hike crop production efficiency in an often hostile environment.

Twin Valley members receive Berks FFA degree

ELVERSON — Eleven Twin Valley chapter members received the Berks County FFA Degree recently at the Berks County FFA banquet.

To qualify for this degree, members must hold the chapter degree for one year, have a satisfactory scholarship record, show leadership ability and earn at least $150 from his projects.

Members earning this degree were: Thomas Wolfe, Martin Miller, Sue Ford, Linda Robinson, Jodi Yohn, Steve Kearns, Mike Williams, Ed Max, Brett Strough, Donna Devine, and Mike Ott.

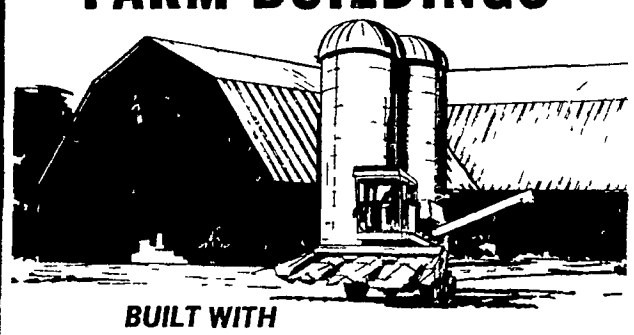
DURABLE ATTRACTIVE FARM BUILDINGS



BUILT WITH FABRAL CORPORATION METAL ROOFING AND SIDING

Fabral roofing and siding panels are custom-cut to length according to job specifications. This saves on material, erection time and labor costs. Most panels can be overlapped in segments of 6" or 8" to minimize longitudinal cutting. Fabral panels are available painted or in natural galvanized steel or aluminum. Painted panels have a baked on finish that is weather resistant and one that will retain its original beauty for years.

Looking for the ultimate IN ROOF PROTECTION?

BIRD ARCHITECT MARK 25 SHINGLES

Protection for 25 years

- New colors, new random design (no cutouts) give your home a longer, more luxurious look
- Won't lift up, won't rip off, won't let water in.
- Specify Bird Architect Mark 25 Shingles for your roof whether you're building or re-roofing.

Channeldrain®: the panel of experts.

Farm building professionals agree: Wheeling Channeldrain roofing and siding panels give you a dollar-tight, weather-tight building.

- Tough, pre-painted galvanized steel lowers maintenance, protects your investment.
- Extra-wide 38" panels mean fewer panels and fasteners, save material costs.
- Patented drain channels run water off.
- Wide panel overlaps assure leak-proof joints.

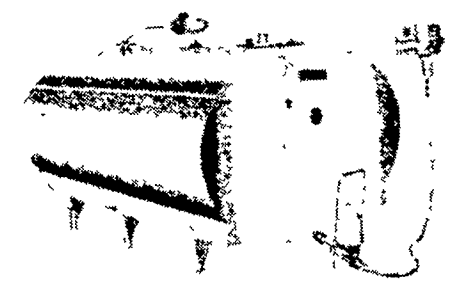
MUELLER
Bulk Milk Coolers

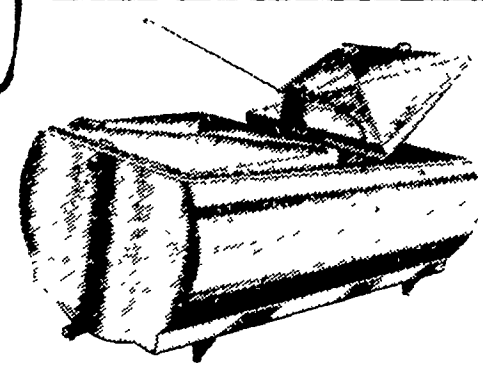
THE BULK MILK COOLER THAT HAS EVERYTHING including AUTOMATIC WASHING SYSTEM!

MUELLER HiPerForm

The Mueller Model "OH" with HiPerForm cooling, Mueller-Matic Automatic Washing System, and built-in freezer protection control is the most advanced bulk milk cooler in the world. The nation's most progressive dairymen are using it. Shouldn't you be?



MAKE ME A BULK MILK COOLER THAT HAS EVERYTHING!



THE MUELLER MODELS OH, MHL, AND MW WITH HIPERFORM MAKE ALL OTHER BULK MILK COOLERS OBSOLETE
SEE THE MUELLER NEW MODELS
★ 500MW ★ 600 MW

The "MW" is one of the Lowest pouring Height Bulk tanks. Check with us all the new features on the "MW" bulk tank.
If you are in the market for a bulk milk cooler and you don't check all the advantages of the Mueller "OH" "MHL", and "MW" you may be buying an obsolete cooler.

24 HOUR SERVICE

Things are tight, but Massey comes through for you!

Take your choice of . . .

$10,000 REBATE

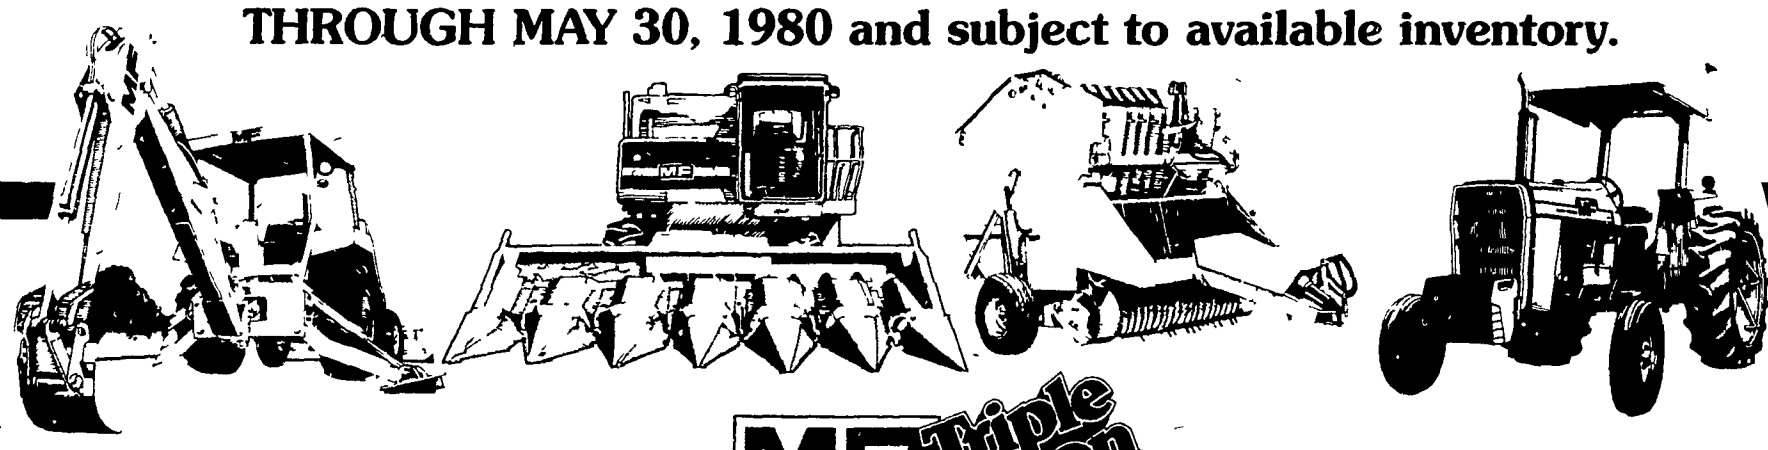
Make your best deal on any eligible new MF tractor, combine, hay tool or implement and then GET CASH BACK from Massey-Ferguson. Up to $10,000 with no trade. Or up to $7,500 with a trade-in. Take as a rebate check from MF, or reduce your purchase price. Regular MF financing available. Not all units qualify for rebates, so see us for details.

OR

13.75% (ANNUAL PERCENTAGE RATE) FINANCING

With money hard to come by even at high interest rates, it's hard to beat this annual percentage rate through Massey-Ferguson. Use it to get the new MF equipment you need. Qualifying credit and down payment required.

Come see us for full details — OFFER GOOD ONLY MAY 5 THROUGH MAY 30, 1980 and subject to available inventory.



MF Massey Ferguson Triple Option Days

Personalized MF financing, parts, and service available.

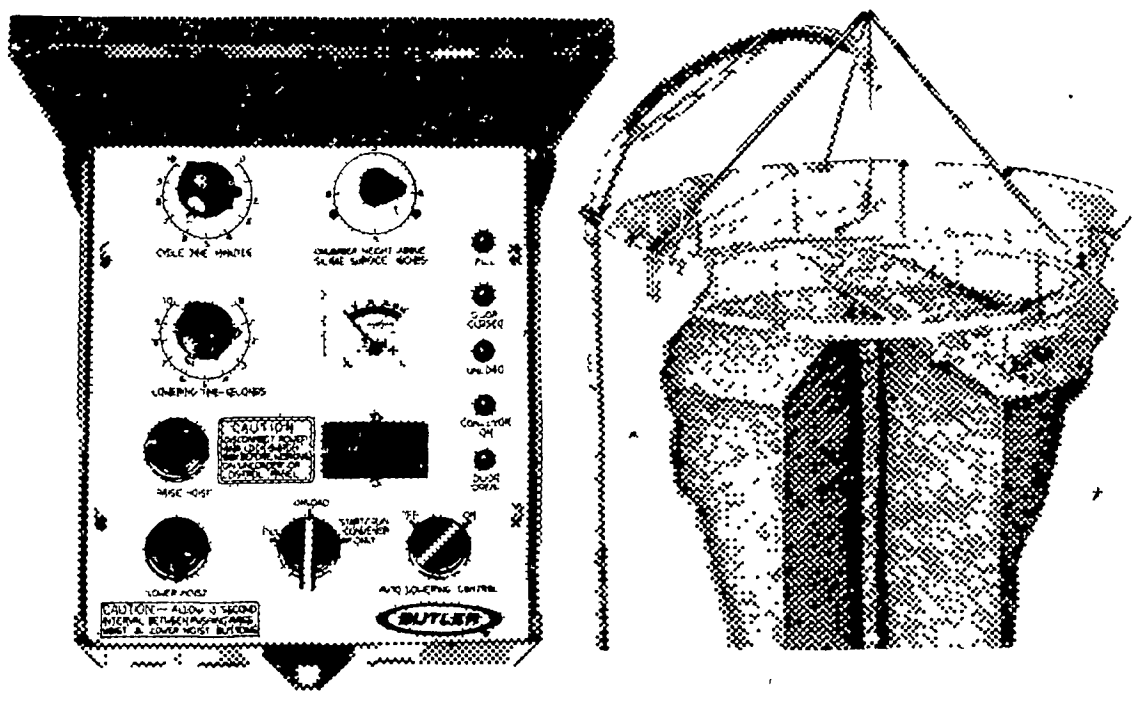
Big Jim®
super silage handler by JAMESWAY®



Why climb?

New Fill-N-Feed® Ground Level Change-Over (optional) for the Big Jim silage system lets you switch from fill to feed and back again, simply by setting a control at ground level. Indicator lights show you what's happening in the silo. Feature adds ease and flexibility while the system evenly packs in more silage; feeds out fast.

See us for systems and service that help make the good life better.

Are vitamin supplements needed?

LANCASTER — Vitamins and health foods – their benefits and drawbacks – were among the questions submitted by the public to Ask a Dietitian, a cooperative project of the Central Pa. Dietetic Association and the Lancaster Pennsylvania Chapter of the American Heart Association

ASK A DIETITIAN, a public program for the observance of National Nutrition Month, received questions that included: I eat three meals a day and am not overweight. Should I use a daily multi-vitamin and mineral supplement?

ANSWER: All of the nutrients our bodies need for good health can be obtained by a diet composed of a variety of wholesome foods including meats, dairy products, fish, vegetables, and fruites, and whole grain products. A balanced diet with sufficient amounts of these foods does not require additional vitamin and mineral supplementation. If you have special needs, they should be recommended by your physician or dietitian.

I've heard that Vitamin E increases virility and may help prevent heart diesease and cancer. Is that true?

ANSWER: There is absolutely no proof that large doses of Vitamin E affects virility or prevents or cures heart disease and cancer in humans. Because Vitamin E is widely found in whole grains and vegetable oils, deficiency symptoms in adults have not been observed, and further supplementation in most diets is unnecessary.

QUESTION: Are foods grown with organic fertilizers better for you than foods grown with chemical fertilizers?

ANSWER: Plants need fertilizers in much the same way that people need food: to supply the nutrients necessary for growth. But before any fertilizers can be utilized by a plant, it must be broken down into its chemical components. At this point, the plant cannot distinquish whether the nitrogen comes from organic sources or chemical fertilizers. Furthermore, experiments conducted by the National Research Council have failed to confirm that organically grown foods supply more nutrition than conventionally fertilized ones.

For more information about vitamins and health foods, or to ask a question related to nutrition, write Ask a Dietitian: American Heart Association, Lancaster Pennsylvania Chapter, P.O. Box 3026, Lancaster, Pa. 17603. For a personal reply by a member of the Dietetic Association, please enclose a stamped, self-addressed envelope.

Chester holds 4-H leader orientation

WEST CHESTER — The Downingtown Savings and Loan Building was the scene of a 4-H new leader orientation meeting held recently.

Six adult volunteers met with Jan Renner, 4-H Coordinator, to discuss the Chester County 4-H Program, the roles of a 4-H leader and the many activities that involve youth and adults.

The following adults will be sharing their time and talents with youths in Chester County: Mr. and Mrs. Bill Duncan, Oxford; Alyce Miller, Cochranville; Bonnie Looper, Downingtown; and Mr. and Mrs. Ted Turpin, Downingtown. For more information about 4-H, contact Jan Renner, 215/696-3500.

AVCO NEW IDEA

If you're in pigs or poultry, the Friendly First has a special loan . . . just for you!

The Agricultural Loan Division of the First National Bank of Strasburg knows that swine and poultry farmers have highly specialized needs And it's always ready to provide the cash to meet these needs *whenever* they arise

Why Because Bob Badger, the Ag Loan officer at the Friendly First, understands farmers' unique and complex money problems He will gladly sit down with you and work out a special *swine loan* or *poultry loan* package, to cover the cost of sow stalls, a new flock of chicks, a broiler house, a carousel hog feeding system, transporting equipment — you name it!

And best of all, he'll use the Friendly First's *flexible payment schedules* to make sure you get a loan you can live with comfortably

So when you need a loan, remember the Friendly First the best friend a farmer could ask for!

The Milk Check

TOM JURCHAK
County Agent

Crawling

After leaping 24 cents in March in anticipation of the new support price of $12.07 on April 1, the Minnesota-Wisconsin price dropped to a crawl last month advancing only nine cents in spite of accelerated purchases of butter, powder and cheese by the Commodity Credit Corporation.

That nine cents brought the M-W for April milk testing 3.5 percent butterfat to $11.68 — still far short of the support price. However, it does give you an inkling of the effort that will be needed to get to the support price in the face of increasing milk production and dwindling demand.

More on that later.

The $11.68 does mean a Class I price in June for Order 2 handlers of $13.93 ($11.68 plus $2.25, the Class I differential) and an April Class II price of $11.59 ($11.68 minus nine cents, the seasonal adjustment).

Your Class I price for April, determined by the February M-W, will be $13.60 in Order 2. These Class prices are only pennies (two pennies on Class I and five pennies on Class II) higher than March when your blend was $12.08.

So, if you keep up your trend of the last five months of increasing productions and decreasing Class I utilization (not consumption) don't expect a better blend price for April. Your Louisville Plan take out will be ten cents higher in April than it was in March (and ten cents higher in May than in April).

What I'm saying is that your blend price will have a hard time making $12.00 the next two months in Order 2 while you're setting new records in milk production.

Things to Come

If the first month of the new price support program was any sign of things to come, it will be a long uphill battle from now until October.

During the first three weeks of April, the CCC purchased 40 million pounds of butter, 46 million pounds of powder and five million pounds of cheese. But all that did was to raise the Chicago butter price four cents, the powder price three cents and the cheese price two cents.

You're still six cents short of the support price of butter and three cents on powder and cheese. In addition, butter production in April jumped 16 percent over last year to keep ahead of the milk production and CCC was making purchases higher than anytime in the last 26 months.

Because CCC purchases only Grade A butter, the price of that grade was the only one showing price improvements while prices for Grade AA and B were dropping two and three cents.

All of this could be taken in stride if we weren't talking about April with May and June yet to come.

It isn't only your increasing production that makes the problem. It is helped by many different economic problems facing you and the people who buy what you sell.

Seven percent unemployment nationally isn't helping you a bit and here in the industrial northeast it's hitting even harder. It not only affects your milk sales but lowers beef prices - reflected from low pork prices - discourages both culling and cheese consumption.

You can name a lot more like credit restriction, curtailed government spending and lots of other things that are happening at the same time you're increasing production for some of the same reasons. So the market is signalling lower prices while the support program is trying to increase them against some very heavy opposition.

Schuylkill 4-H'ers attend teen/retreat

SCHUYLKILL — Seven area 4-H'ers had the opportunity to learn more about their environment during the Northeast 4-H Teen Retreat held recently at Stony Acres near Marshall's Creek.

The three-day experience was titled "Your World, My World," and according to Tom Ellis, Director of Pinchot Institute and instructor for the event, the program was designed to provide the teens with an opportunity to develop why our world is having ecological problems and how they can help.

Schuylkill County was represented by seven teen leaders from various parts of the county. The participants were: Theresa Gahen, Mahanoy City; Christine Temple, R1 Hegins; Nancy Tallman, Tower City; Kathy Balmer of R1 Hegins; Danielle Carl, St. Clair; John Williams, New Ringgold; and Mike Temple, R1 Hegins.

Judi Keefer, 4-H agent, served as chaperone for the event and reports that the young people discovered it is essential that everyone helps in the task of keeping our environment healthy. The seven teens will be conducting a two-day camp at Camp Pine Grove, July 23-24 to share the experience they had with other 4-H'ers in the county. Plans for the two-day event include guest speakers on environmental safety, a nature scavanger hunt, hikes, and games.

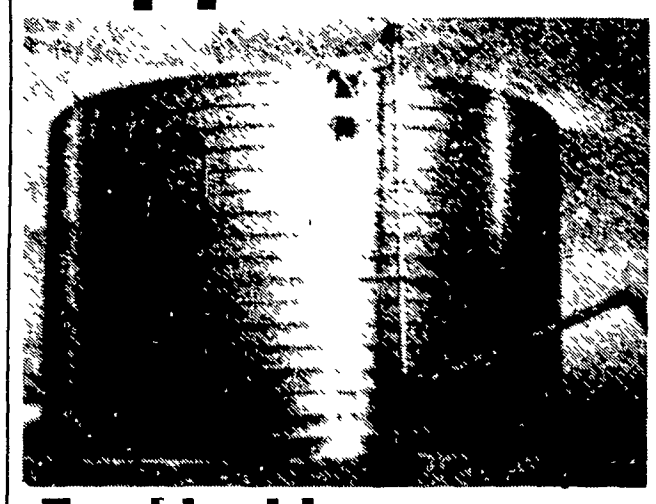
RELIABLE FLORIN FEEDS

Lipp.



For Liquid Manure Storage.

Unique construction methods mean Lipp builds unique manure tanks—in fact, the strongest tank on the market today

We roll our tanks upward on location from coils of steel and seal the coil edges with a unique double fold lock seam The result is a boltless, smooth inner wall tank in 12 to 90 foot diameters and up to 900,000 gallon capacities Interiors can be epoxy or Black-Klad with aluminized or galvanized exteriors And construction is quick

We're Lipp We're different and we're better Storage is our specialty Call or write today and get more details on the strongest manure tank available

Redding elected to chair Penn State FFA

Russell C. Redding

UNIVERSITY PARK — Russell C. Redding of Gettysburg, has recently been elected to serve as President of the Penn State Collegiate FFA for 1980-81.

Redding, son of Lawrence C. Redding of Gettysburg, is a sophomore majoring in agricultural education at Penn State. He is a 1978 graduate of Gettysburg Senior High School.

He is also an active member in Delta Theta Sigma Fraternity, Agriculture Student Council, Youth Education Consulting Committee, World Agricultural Service Society, Agriculture Education Recruitment Team and the American Institute of Cooperation, which will be held at PSU in August.

Senate Ag Committee approves changes in Farm Credit

WASHINGTON, D.C. — The Senate Committee on Agriculture, Nutrition, and Forestry recently approved legislation broadening the lending authority and giving greater flexibility to the Farm Credit System, the major credit source for U.S. farmers.

The legislation is the first major revision of the Farm Credit System since 1971. The System provides about a third of the credit needs of American agriculture—including individual farmers and rural cooperatives—with an annual loan volume of more than $50 billion.

The System, which is organized as cooperatives and receives no tax funding, includes the Federal Land Banks, which make long-term farm real estate loans; the Federal Intermediate Credit Banks, which make intermediate-term operating loans thrugh Production Credit Associations; and Banks for Cooperatives, which lend to farmer cooperatives.

The bill would lower to 60 percent the minimum membership of a cooperative who must be farmers to be eligible to borrow from Banks for Cooperatives. The current farmer-member minimum is 80 percent, except for rural electric and telephone co-ops where the requirement is 70 percent.

Another major provision of the bill would permit Federal Land Banks to make loans for more than 85 percent but not greater than 100 percent of the appraised value of farm real estate when these loans are guaranteed by a Federal agency, such as Farmers Home Administration, or by a State Government.

The bill would also broaden the authority of Federal Land Banks and Production Credit Associations to finance processing and marketing activities and facilities directly related to an agricultural or aquatic producer's operations and those of other bona fide producers. Such loans could be made if the applicant's operation supplies at least 20 percent of the quantity of the commodity to be processed or marketed.

In a major new authority for the Farm Credit System, the bill would authorize Banks for Cooperatives to finance agricultural export transactions in which U.S. cooperatives are major beneficiaries.

Banks for Cooperatives would be permitted to make deposists in foreign banks, receive and hold credit balances from banks and borrowers, buy and sell bankers acceptances, buy time drafts payable by foreign buyers of farm products, take part in currency exchange and make loans to facilitate transactions of borrowing cooperatives.

The bill would also authorize Farm Credit System banks and associations to sell to their members, on an optional basis, certain types of insurance, including credit life and disability insurance in amounts necessary to cover loan commitments and multiple-peril crop and livestock insurance.

The bill would expand aquatic financing by the Farm Credit System by allowing Federal Land Banks to make long-term loans to producers and harvesters of aquatic products. It also would clarify that cooperatives solely engaged in furnishing aquatic business services are eligible to borrow from Banks for Cooperatives.

Another provision would encourage cooperation between Farm Credit System institutions and commercial banks by authorizing Federal Land Banks to participate in loans with lenders outside the System and by authorizing Production Credit Associations to issue participation certificates to commercial bankers and other lenders. This would streamline a program under which PCAs participate in farm loans originated by commercial banks.

FCA names Madero to general counsel

WASHINGTON, D.C. — Frederick R. Medero, currently the director of the securities disclosure division, Office of the Comptroller of the Currency, will become general counsel for the Farm Credit Administration on June 2.

The FCA is the independent Federal agency that supervises, examines, and regulates the Farm Credit System, whose 37 banks and 930 associations last year served nearly a million farmers and ranchers and 3,500 cooperatives with $60 billion in credit.

In making the announcement, FCA Governor Donald E. Wilkinson said Medero would direct the Office of the General Counsel in performing legal services for the Federal Farm Credit Board, the governor and members of the FCA staff. He also will consult with and coordinate the work of attorneys employed by the Farm Credit Banks.

BIG SALE
COAL/WOOD STOVES

If you've been thinking of buying a stove but have been holding out because of the economy, think fast! We are clearing our warehouse of over half our 1979 stock in what must be the largest coal/wood stove sale of its kind in Southeastern Pennsylvania. We are offering over $60,000 worth of stoves at prices we guarantee no one will be able to repeat in the 1980 heating season. Because these sale items will move quickly we suggest you call or visit our store as soon as possible and place your order.

Computers and cow leasing can pump up profits

UNIVERSITY PARK — With changes in agriculture proceeding at a rapid pace, computers and the technology that goes with them are offering more and more potential as an essential management aid to dairymen.

"Progress in computers should not make anyone in agriculture uncomfortable," says John Speicher, dairy farm management specialist at Michigan State University. Speaking to Pennsylvania dairymen attending the recent dairy herd management conference at Penn State, Speicher added, "We should not back away from computers, but should employ their advantages to our benefit."

Speicher noted that dairy herd improvement associations offered the first computerized dairy herd management system which identified cows and gave important management data to farmers. He said DHIA records have been valuable in providing knowledge about herd sires and in maintaining a record base.

He stressed that a computer can be used in all areas of the farming operation, with the dairy herd just one part of the total farm picture. He said, "There are presently computers actively being marketed and utilized which can offer information on individual animals which is kept in storage and can be called on to help the manager make decisions."

Such a complete system, Speicher said, "helps the manager be fully informed about all the animals all the time."

Speicher said the use of "mini" or "micro" computers on the farm is a real possibility, along with the idea of using on-farm terminals.

Other areas which can be computerized to a farm manager's advantage include crop production, the needs for which will parallel needs in a dairy herd. Computers can give information on moisture, pest concentration and can even be employed to measure temperature for irrigation, he said.

A computerized financial accounting system can be employed as a good business management tool to show profit and loss and give advice on such things as culling to help dairymen maximize income. Payroll, tax reporting, and personnel accounting can also be taken care of with computers.

There are innumerable decisions aids which can be called forth from a computer, including tax planning and providing balanced rations.

While all these management areas lend themselves to computerization, Speicher noted that in most cases it is a matter of producing programs to get the proper information. And while computers have become cheaper and cheaper over the years, Speicher says, "The cost of programming is going up as fast as computers go down."

If the proper elements are combined, a wide variety of information can be available to the dairymen. Before such systems come into common usage, however, he said the programming must be economically feasible.

In another area of management, Speicher presented information on the economics of raising, buying or leasing herd replacements.

Using statistics which included the costs of raising heifer replacements including feed and labor, Speicher showed that buying replacements can be an economically viable option. He pointed out, however, that as the cost of replacement heifers rises, some of the advantages in sales are lost.

Furthermore, he pointed out, dairymen lose their genetic base when they sell their calves. He said, "It is hard to buy heifers that you could breed yourself."

Speicher noted every expense on the farm goes up as milk production goes up, but said that income goes up faster.

He said agreements can be written when selling calves with an option to purchase. In this way a dairyman can get back the same heifers he sold earlier which offers some big advantages. It's difficult to find people willing to raise heifers, Speicher said, because of the high mortality.

Speicher said there are presently not many people raising heifers on contract, because up to now it hasn't been profitable. However, it is better now than a few years ago, and is becoming more profitable.

Leasing can offer some advantages to the cost-wise dairyman, Speicher said, but added that as interest rates increase, leases come out ahead.

Leasing overcomes problems of accumulating enough cash or credit to purchase cattle, and it conserves working capital leaving additional capital available for use in other parts of the farm business. This can improve cash flow.

Speicher cautioned that a thorough understanding of the terms of the lease are important as well as the timing of all costs and returns. No one should enter into a contractual agreement without an understanding of these terms. —SBB

Little named recipient of Dow Study Tour Scholarship

UNIVERSITY PARK — Richard F. Little, Montour County Extension director of Penn State's Cooperative Extension Service staff, has been named recipient of a 1980 Dow Study Tour Scholarship.

Little is one of 30 Extension agents in the United States who will study agricultural research, production, and marketing practices in California. The Dow Study Tour will start in the San Francisco area June 16 and terminate in San Diego on June 27.

The 1980 tour is sponsored by the National Association of County Agricultural Agents and Dow Chemical.

"The tour provides an opportunity for extension educators to observe innovative ideas and rapidly communicate these ideas to farmers and industry representatives," says Joseph Macialek, extension community resource development agent and state tour program chairman.

Little is one of five agents selected from the Northeast States on the basis of Extension program responsibilities, program accomplishments, future educational plans, and professional goals.

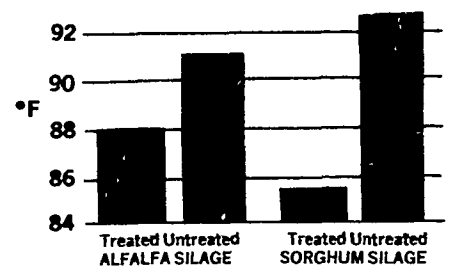
Protect your silage!

Treating your grass or alfalfa silage this year with SILO GUARD® can **substantially increase the feeding value** of your silage. Since the goal of making silage is to preserve the ensiled forage as near to the crop harvested, any loss is undesirable. If protein is lost or becomes heat damaged during fermentation, the ensiling process was unsuccessful. Also, the development of high temperature during fermentation means the process was wasteful of energy. **Heat developed during fermentation is energy that is lost for feeding.**

ENSILING TEMPERATURES



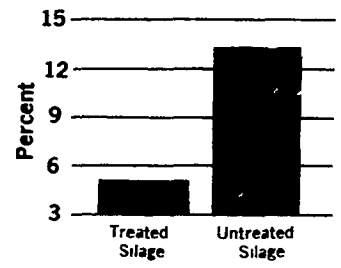
SILO GUARD reduces heating — research at Kansas State University on both alfalfa and sorghum silage showed how effective SILO GUARD can be in reducing heat

Research at the University of New Hampshire on wilted orchard grass silage showed a **3% increase in available crude protein** with SILO GUARD versus untreated silage.

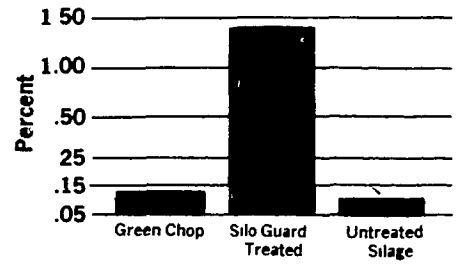
SILO GUARD reduces dry matter loss. Kansas State data on sorghum silage treated with SILO GUARD **reduced total dry matter loss** during fermentation.

This means there was 8.5% more dry matter in the treated silage

DRY MATTER LOSS



PROPRIONIC ACID



SILO GUARD increases acid production. Alfalfa silage test results at the Cargill Research Farm showed how SILO GUARD influences the production of beneficial Proprionic Acid

Test data In 2,000 lb of 45% dry matter alfalfa silage, 13 lb of proprionic acid was produced by the addition of SILO GUARD

This "extra" level or proprionic acid also **increases** the "bunk life" of silage and **inhibits** the growth of yeasts and molds in silage after it is removed from the silo All these benefits and more can be realized when you treat your silage this year with SILO GUARD

SILO GUARD works on all types of silages, including corn silage and high moisture corn **Save more of the valuable nutrients in your silage with Silo Guard.**

Dauphin County DHIA Monthly Report

April, 1980

The three Holstein herds with daily butterfat averages topping two percent included.

The 59-cow herd of Robert J. Schaffer averaged 61 4 pounds of milk, 2.29 pounds of butterfat with a 3 7 percent test; the 25-cow herd of Larry L. Boyer averaged 56 6 pounds of milk, 2.17 pounds of butterfat with a 3 8 percent test, and the Restful Acres herd of 58.9 cows averaged 51.3 pounds of milk, 2 01 pounds of butterfat with a 3 9 percent test

In 305-day lactations, Restful Acres' Nora produced 23,391 pounds of milk and 804 pounds of butterfat, while Jean of the J. Richard Alwine herd produced 19,311 pounds of milk and 865 pounds of butterfat.

Juniata County DHIA Monthly Report

The April 1980 report of the Juniata County Dairy Herd Improvement Association is as follows

Records were calculated for 4,096 cows in 80 herds

The five high herds in average butterfat production per cow per day are listed below Owner's name and address, number of cows, average daily pounds milk and butterfat per cow, are given in order.

F & N Love, East Waterford	45	58 0	2 36
James D Wagner, Mifflintown	58	49 4	2 07
Barry F Lucas, Millerstown	39	53 4	2 06
R & R Saner, Thompsontown	50	50 1	2 06
Harold Shearer, East Waterford	38	53 0	2 04

Three hundred seven cows completed lactation records of 305 days or less Three of these cows produced over 800 lbs of butterfat, 17 produced over 700 lbs ; 42 produced over 600 lbs , and 72 produced over 500 lbs.

The fifteen high cows are listed below The owner's name, cow's name, pounds milk and pounds butterfat are given in order

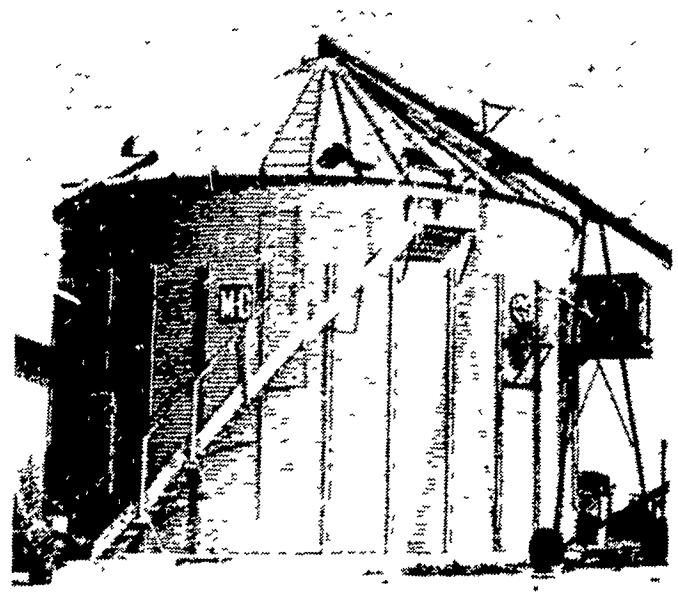
GREAT GRAIN HANDLING SYSTEMS BEGIN WITH GOOD PLANNING AND M-C DRYERS

Now Available!

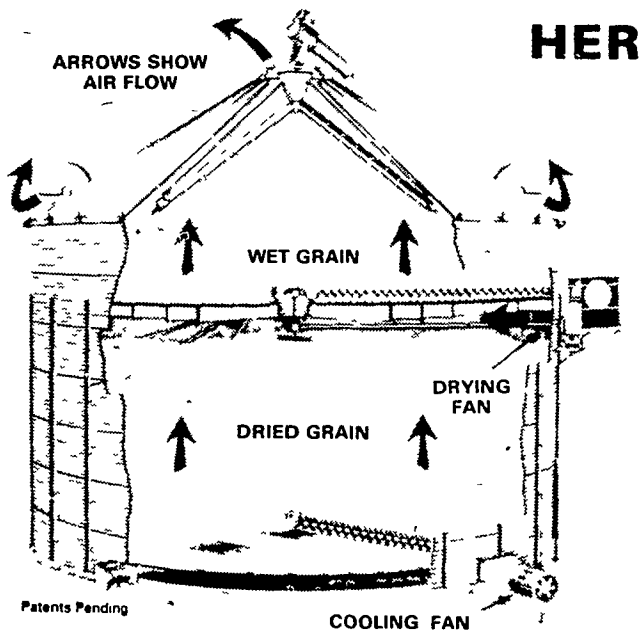
M-C DRYBINE™



The ENERGY SAVING IN-BIN DRYING SYSTEM

The new Mathews Continuous In-Bin Dryer is a combination storage drying and cooling bin designed to save you money It is efficient, fast easy to manage and costs less to operate The drying process is fast, while the cooling process is slow, eliminating stress cracks and damage caused by fast cooling There is nothing else like it on the market The Mathews design requires no wet holding bin or separate bin for cooling

- **Saves energy** for profitable operations
- **Proven** high capacity results (357 bushels per hour)
- **Eliminates** the most common problems found in other in-bin dryers
- **Low** per bushel costs



HERE'S HOW IT WORKS...

As wet grain enters the top of the bin, it flows into the upper drying chamber as harvested, with no need for a wet holding bin This upper chamber holds up to 4 feet of wet grain (2250 bushels)

Every seven minutes, a continuous flow auger makes a complete revolution around the upper drying floor, drawing the dried grain into the lower cooling area

Hot air is introduced under the upper floor to dry the wet grain and to heat the surface of the grain that is distributed into the lower cooling chamber The air that is used for cooling the grain picks up heat during the cooling process This heated air is then used again in the drying process, saving on fuel costs

When not being used for drying, the bin will store 8500 bushels of grain

BIN DRYER TEST FOR FALL OF 1979

Carol Slusser Fraind slates art show

BERWICK — Carol Slusser Fraind, a resident of Berwick who specializes in paintings of farms and farmers will hold her third one woman exhibit May 18-June 16 at Bloomsburg State College, Kehr Union Building. The exhibit will be open between the hours of 8 a.m. and 4 p.m. May 18-27 and from 8 a.m.-11 p.m. daily thereafter.

A native of the Berwick area and a graduate of Bloomsburg State College, Fraind has taught science for the past 12 years in the Berwick School District and is currently working on certification in art from Kutztown State College. She recently won first prize in the Hazelton juried fine arts festival held earlier this month.

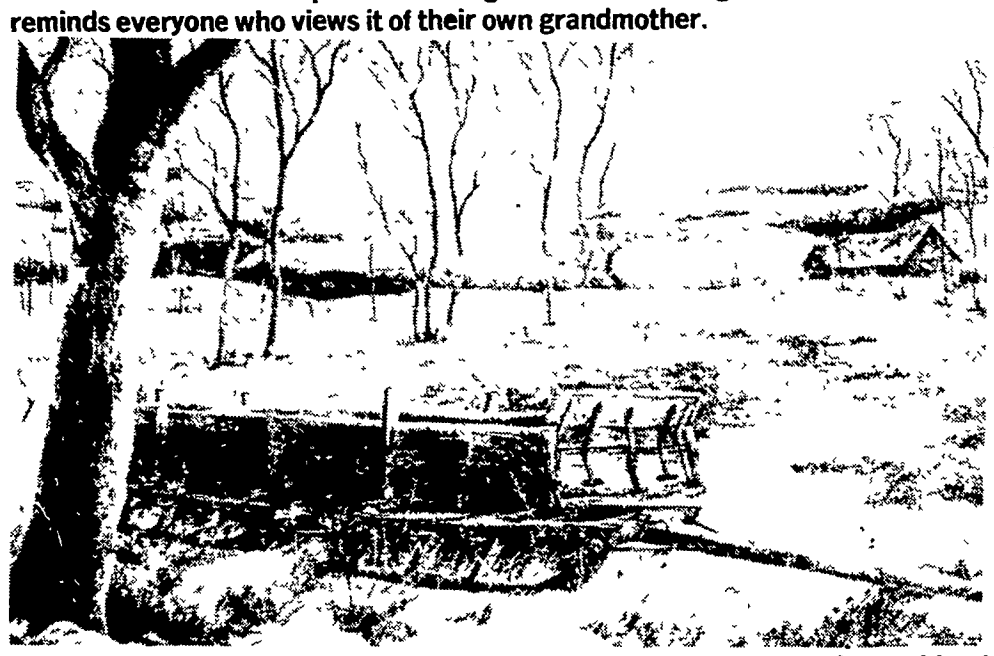
This show will be a collection of approximately 35 paintings centering upon rural and agricultural people and themes. Watercolor and acrylics are her favorite media, but she also utilizes other media to achieve certain affects.

Fraind states her purpose in painting is far more important than any of the awards she has won. Her artistic undertakings reflect her "rural background and perhaps these paintings will make people more aware of the forces that are eliminating family farms and open spaces. Unfortunately, certain groups in our society look at rolling fields and quiet forests only in terms of how they can be exploited to make big profits. In the few years that I've been painting, I have noticed how each farm is unique — different in some way from every other farm."

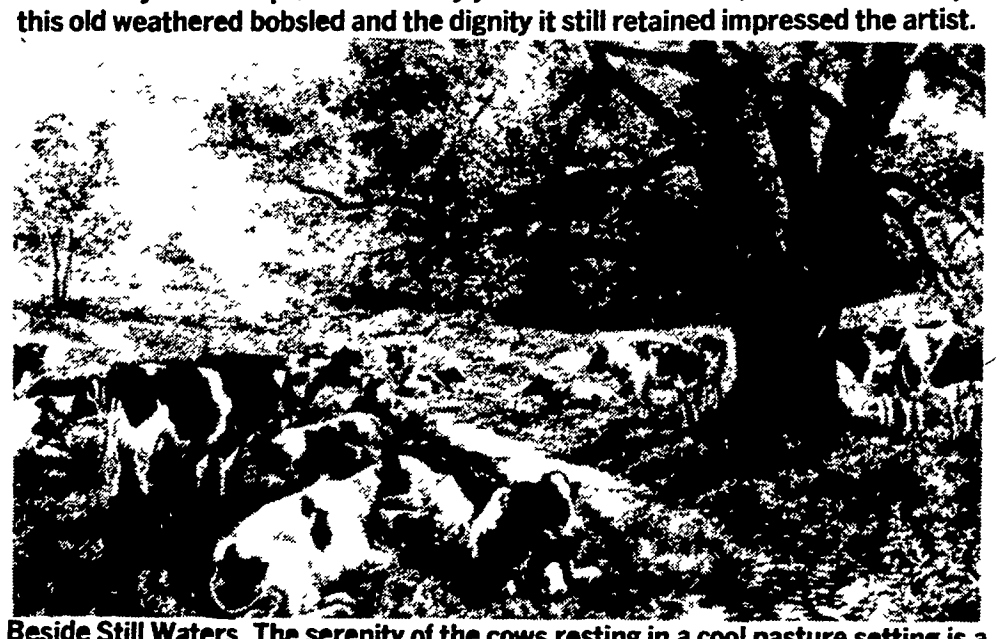
She continues, "No one will every stop progress and its relentless encroachment, but perhaps communities will learn to guide these changes toward more intelligent and aesthetic results. Allowing people to see the uncommon splendor in the commonplace is the first step toward having them appreciate and try to preserve the things that really count."

One of her works will be included in a calendar printed by the McCleery-Cummings firm this year.

Emma. A watercolor portrait of a gentle hardworking farm woman which reminds everyone who views it of their own grandmother.



Untimely End. In spite of the many years in the elements, the workmanship of this old weathered bobsled and the dignity it still retained impressed the artist.



Beside Still Waters. The serenity of the cows resting in a cool pasture setting is a refreshing change from the work-a-day world.

Ponhaus. This oil painting features butchering which is still a common occurrence in Hetterville.

Old reserve wheat

WASHINGTON, D.C. — Old reserve agreement wheat may no longer be removed from the farmer-owned grain reserve without penalty since the national average mid-month price for April is $3.40 per bushel, 10 cents below the $3.50 reserve release level, announced Ray Fitzgerald, executive vice president of the Commodity Credit Corporation.

Old agreement wheat is wheat placed in the reserve prior to restriction of grain shipments to the Soviet Union announced January 4.

Corn and sorghum also may not be removed without penalty, Fitzgerald said. Oats continues in release while barley and rice remain in call status, he said.

Fitzgerald said the reserve status decisions were made following a review by CCC of the U.S. Department of Agriculture's agricultural price report released here April 30.

Storage earnings resumed May 2 in all states for wheat and continue in effect for corn, oats and sorghum. No storage payments will be made for barley and rice.

Data used by CCC in determining the release and call levels include five-day average prices as reported by USDA's Agricultural Marketing Service (which show prices bid by buyers at selected markets) and the month-end report of prices received by farmers issued by USDA's Economics, Statistics and Cooperatives Service. This end-of-month report shows the previous month's average price and the current mid-month price.

SPERRY NEW HOLLAND
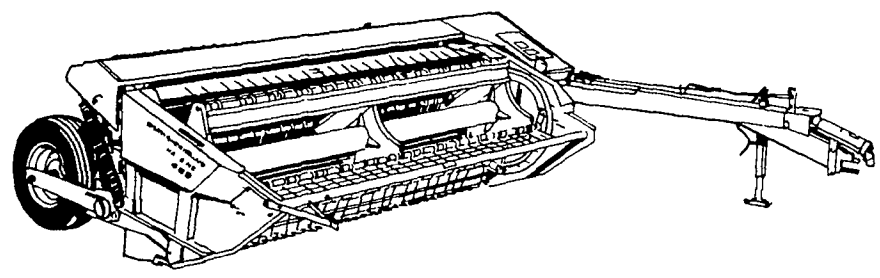
FINANCIAL SERVICES
MAKE IT EASIER TO HAVE THE BEST

Why do more farmers in this area buy Sperry New Holland haytools?

Because they are "built Sperry New Holland tough" . . . and they're backed by a dealer organization with a "we service what we sell" policy.

Quality haymaking begins here

Sperry New Holland Haybine® mower-conditioners



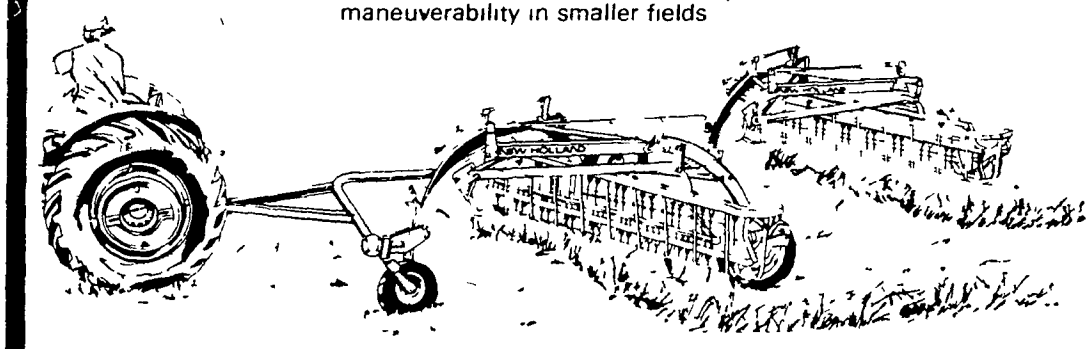
- 7-ft, 9-ft and 12-ft models
- Full lateral flotation lets the header hug the ground!
- Chevron intermeshing, high-speed rolls practically eliminate plugging!
- Both rolls are rubber, to treat the crop with leaf-saving gentleness!

More farmers buy Sperry New Holland Haybine® mower-conditioners than any other kind!

Rake teams get the job done fast.

Sperry New Holland Twindrower® Dual-Rake Hitch.

The Twindrower can rake two swaths into two windrows, or two swaths into a single windrow! For road travel, both rakes line up behind the tractor The Twindrower provides excellent maneuverability in smaller fields

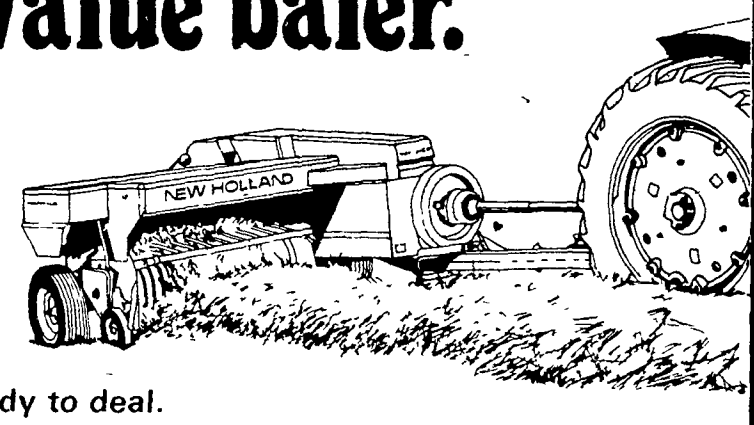


Beat the weather - rake in half the time!

Try to find a better value baler.

The Model 310 baler from Sperry New Holland.

- 75 strokes per minute for tight uniform bales
- Dependable knotter adjusts for various twine diameter
- Flow-Action® feeding system for better bale shape
- Choice of standard or Super-Sweep pickup



Trade that old baler now. . . we're ready to deal.

And remember, they're backed by the SPERRY NEW HOLLAND parts system.

Visit your Sperry New Holland dealer listed on the facing page. His service department is staffed by men with experience and training. Let him show you how he can serve you better!

SPERRY NEW HOLLAND

Red and white sales held

LANCASTER — The top selling animal at the Second International Red & White Heifer Sale held at the Lancaster Guernsey Sales Pavilion was Artim Molly Chief Tammy-Red, which brought a high winning bid of $4,400.

The seven-month-old heifer was consigned by B. Timothy Sturgeon, Fombell, Pa.; and was purchased by Blair Red Breeders, Martinsburg, Pa. The purchasers include Harold and Russell Steele, Donald and Earl Stonerook, Donald and Alan Gearhart and J. Milton Cole and Sons.

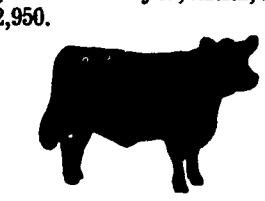
She was sired by Vincent-View Molly Chief and her dam is a Very Good daughter of Performer, which has since scored excellent.

A total of 40 heifers were consigned at the sale sponsored by the Red and White Dairy Cattle Association. The sale average was $1,734, one of the highest recorded in the East.

The second high selling heifer was two-year-old Elleeta Citation Janice-Red at $3,150. She was consigned by Willsey Farm, Belmont, Ontario, Canada; and bought by LaVerne G. Moser, New Berlinville, Pa.

The average sale price of 43 red and whites in the Herrvales Milking Herd Dispersal, was $1,833. The bred heifer average for the herd of Karl W. Herr, Kirkwood, was $1,683; while the average for milking cows was $1,844.

The top animal, Herrvales Jasper Irma-Red, was sold to Donald and Earl Stonerook, Martinsburg, for $3950. The second high animal, Herrvales Jasper Dana-Red, was purchased by James F. Myer, Lititz, for $2,950.



Artim Molly Chief Tammy-Red brought a top sale price of $4,400 at the Second International Red & White Heifer Sale.

Talk to the man who knows

Pump . . . Agitate . . . Fill!
The versatile Badger Northland Pump/Agitator is available now!

The portable Badger Northland BN103 is built for years of tough, dependable, high capacity performance It s versatile enough to handle anything you can give it Designed to pump and agitate pits or lagoons, it can also be used as a manure transfer system for transferring manure from holding pits to lagoons or other storage facilities Choose the gearbox that matches your tractor s horsepower and PTO RPM

The BN103 features an agitator nozzle which sweeps a full 300° for thorough agitation Reaches all corners of the pit or lagoon

Add to this the pitched blade of the Souper-Charger which moves material into the impeller for smooth, uniform high capacity pumping The semi-cupped design of four paddles develops more pressure for mixing settled solids Breaks up crust

See your Badger dealer now Ask him to show you how the BN103 and other Badger manure handling products can add dollars and cents efficiency to your operation

Energy management award is presented by Brentwood S. Shunk, left, vice president PP&L, to Richard Hurst, one of the owners of Oregon Dairy Farm Market. Looking on are Hurst's brothers, Victor, rear, and Curvin, far right.

Oregon Dairy gets energy award

LANCASTER — Efficient use of energy - including an energy-saving heat recovery system - has earned Oregon Dairy a Pennsylvania Power & Light Co. Energy Management Award.

The award, part of PP&L's company-wide program to encourage energy conservation, recognizes significant manpower and financial investments made to improve the energy efficiency of industrial and commercial facilities.

The Oregon Dairy building, located on Oregon Pike north of Lancaster, houses a 28,000-square-foot supermarket and facilities to process and market milk from the adjacent Hurst family farm.

Heat from the refrigeration and freezer compressors is used for space heating in the sales, food preparation and office areas. Excess steam from the milk processing operations serves as backup space heating, avoiding the need for electric resistance supplemental heating. Excess steam is also used to heat the 2,700-square-foot warehouse, which is kept at 40-45 degrees during the heating season.

Heat recovered from the refrigeration units and in-store baking units provides the building with its hot water needs, another energy-saving feature.

Oregon Dairy is the first store in the Lancaster area to use air returns under the freezer and refrigeration cases, according to Shunk. In addition to improving the comfort in the store, this system reduces air-conditioning requirements for the building. A two-stage cooling system is used to further increase the energy efficiency.

The building is well-insulated, and energy-saver fluorescent lamps are used throughout the facility. The lights operate on two separate circuits to permit operation at one-half the normal lighting level, if desired.

Because of the energy-efficient systems, the building owners will save about 130,000 kilowatt-hours annually and will limit demand - the maximum need for electricity at a given time - by at least 260 kilowatts.

Berks 4-H'ers attend recreational weekend

DOUGLASSVILLE — Twelve 4-Her's from Berks County attended a recreational weekend recently at the Montgomery 4-H Center.

They were as follows; Steve Werley, Darlene Dietrich, Danielle Yoder, Karen Lesher, Diane Werley, and Sally Hensel from Hamburg; Kerry Schwoyer, Oley; Glenn Yanos, Douglassville; Eileen Fisher, Conrad Weiser; Julie Mills, Conrad Weiser; Jayne Malsbury, Judy Malsbury, Rehrersburg. Rick Kauffman, extension agent chaperoned the event.

The program included workshops on nutrition and working with the handicapped. There was also a county athletic competition where Berks brought back a 2nd and 3rd placing, and a talent show where Berks brought back another 2nd place.

Franklin vo-ag students learn sheep management skills

UNIVERSITY PARK — Twenty-two vo-ag students of Franklin County participated in a sheep clinic sponspored by the Franklin County FFA in cooperation with the Pennsylvania Extension Service and the Department of Agricultural Educational at Penn State recently at the farm of Bruce B. Gamble, Concord.

The sheep clinic was conducted as part of a statewide effort to expand sheep produced in Pennsylvania. Basic technical sheep management skills were taught by David Kehr, vocational agriculture teacher at the Waynesboro Area Senior High School. The skills taught included catching sheep, making an instant halter, telling the age of sheep by their teeth, deworming using a dose syringe, giving an intramuscular injection, and determining temperature with a rectal thermometer These sheep management skills were taught to enable shepherds to become competent in performing sheep management practices. Kehr thoroughly explained and demonstrated each skill followed by a laboratory session allowing each participant to practice the technical skills. Under the direction of David Kehr, all participants had the opportunity to become competent in performing each skill.

Thirteen participants received the certificate of accomplishment. To qualify, individuals had to meet standard criteria by performing their newly learned skills before an evaluator from Penn State . Those receiving the certificates of accomplishment were: Jerry Fleming, Fort Loudon; Ben Gamble, Concord; Mike Martin, Mercersburg; Charles Mellott, Waynesboro; Albert Harbaugh, Blue Ridge Summit; Jay Hampton, Spring Run; Jo Ellen Shockey, Blue Ridge Summit; Roger Kerstetter, Doylesburg; Keith Price, Fannettsburg; Larry Martin, Greencastle; Charles Baer, Waynesboro; Travis Cuaffman, Waynesboro; and Brenda Henning, Waynesboro, RAB.

Penn State to sponsor rabbit conference

UNIVERSITY PARK — A special Rabbit Conference will be held by Penn State, Friday, June 20 through Saturday, June 21 at the University Park campus in State College.

The program is open to all persons interested in learning more about the rabbit industry. Herb Jordon, extension poultry professor, is serving as conference chairman.

Key speakers will highlight the conference. The following topics will be covered: preventative medicine in the rabbitry from a veterinarian's view by John Harkness, assistant professor of veterinary science at PSU; the New Zealand, strong points and limitations by Charles Huber, East Aurora, New York; handling the laboratory rabbit and physical anesthesia by Louis Barnette, Bristol-Myers Products, New Jersey; rabbit—useful to a scientist by William Patton, assistant professor of veterinary science, PSU; environmental systems may affect cost of producing rabbits by Herbert C. Jordan; angora rabbits, wool production, strong points and limitations by Bonnie Wood, Austin; nutrition and the commercial rabbitry by Rick Ruppert, Master Mix/Central Soya, Fort Loudon; the power of genetics in the rabbit by Edward G. Buss, professor of poultry science, PSU.

Other workshop sessions will include: youth and the rabbit, Angoras and wool production (a demonstration of spinning); disease prevention and control; marketing and international competition; breeding and genetics of selection; housing, environment and ventilation; nutrition and feeding adequate diets.

For more information and a brochure containing details and registration forms, contact Nancy Kadwill, 400 Markley Street, Norristown, PA 19401.

MONDAY, MAY 26

AT 11:30 A.M.

At the farm in Bedford Co., 3 miles north of New Enterprise, Pa. Take Route 26 north from Everett, Pa., then north on Route 36 to Waterside, Pa., then north on Route 868 to stop sign. Turn toward New Enterprise to second farm.

75 Registered & Holsteins & Baby Calves

30 DAY HEALTH TESTS — MAJORITY VACCINATED — PREG. EXAMINED
D.H.I. RECORDS — A HOME BRED HERD

42 Milking, most are 2,3, & 4 yrs. old; only a few 6 yrs. or over. 15 fresh. 10 due July and Aug., balance thru the year. 15 Bred Heifers, 12 due from June thru Sept. 3 bred for late fall. 3 yearlings, 5 from 1 yr. to calves.

All are A-1 sired. Most by Curtiss and Atlantic.

Sires represented are Astronaut 7, Milu Betty Ivanhoe Chief 10, Jo Dan 10, Gay 4, Jack 4, Apollo Rocket 3, Pacemaker 5, Eden Pete, R. Maple, Ivanhoe Star, Apollo, Electron, Topper, Orbit, Lancelot and Atlas.

SERVICE SIRES — ASTRONAUT, CHARSAM ELEVATION PABST, IVANHOE CHIEF & SAGESER CHIEF ASTRONUAT

An Astronaut dau. 5y 305 da., 21,173m., 3.8%, 812f. bred to Ivanhoe Chief sell-with heifer calf born 1-5-80, by Pacemaker. G. Dam an Apollo 5y 365 da., 23,442m, 848f.

A Jack dau. 4y 341 da., 20,076m., 3.6%, 723f. sells with Jo Dan dau. due with first calf before sale - looks great.

A Highmark dau. 3y 318 da., 18,098m., 611f., her dam an Astronaut has 2 Ivanhoe Chief daus., one due near sale, the other a Jan. calf.

Many others equally as impressive.

For young replacement with good udders, sired by Popular Plus proven sires, arrange to see this herd sell on Decoration day.

Popcorn's popularity apparently goes back to ancient times. Scientists have found kernels that are nearly 4000 years old. The Indians of the Americas discovered popcorn before Columbus discovered America.
